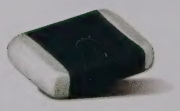
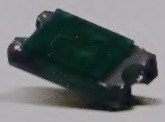
Littelfuse®

Whatever your innovation,
let Littelfuse products protect it.

Metal Oxide Varistors



Multilayer Varistors

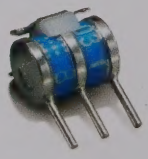


PulseGuard® Polymeric ESD Suppressors

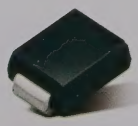
Fuses

TVS Diodes

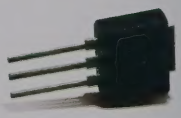
Diode Arrays



Gas Plasma Arresters



Teccor® SIDACtor® Protection Thyristors



Teccor® Switching Thyristor

Wickmann and Teccor brands are now part of the Littelfuse circuit protection portfolio.

Delivering the latest with the greatest.

Littelfuse and Mouser are your trusted partners for circuit protection solutions. We are committed to delivering safe and reliable products to protect your digital consumer, industrial, automotive, and telecom applications. You can count on Littelfuse and Mouser for expertise and circuit protection solutions that are right for you. For more information, visit ***mouser.com/littelfuse*** today.

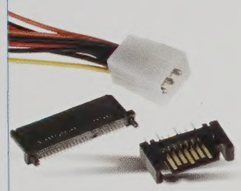
NEW PRODUCT

Here are just a few of the new products added.
For a complete listing of all new products go to:
www.mouser.com/newproducts

All new products can be identified by a **BLUE** banner on the outside of the page or a new product logo by the part.



3M

SATA Cable Assemblies and Connectors

SATA is the next generation of serialized data transmission for data storage applications.
Page: **884**

OMRON
ELECTRONIC COMPONENTS

Power PCB Relays

Several new power PCB relays provide switching capacity of up to 30A in a variety of contact configurations.
Pages: **1243—1246**

ITW Switches

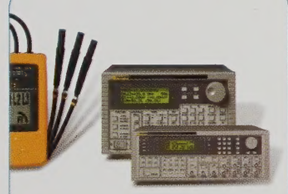
Pushbutton Switches

These zinc alloy sealed switches keep out dust and moisture.
Page: **1152**

Lattice Semiconductor Corporation

EC/ECP FPGAs

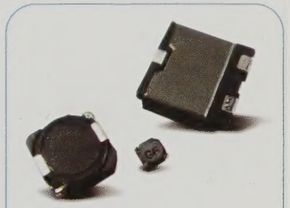
These new, low-cost FPGAs offer memory, DDR interface, and DSP functionality.
Page: **190**



FLUKE

Test Equipment

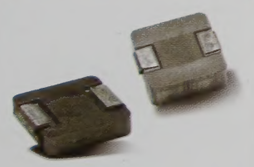
New Signal Generators, Waveform Generators, and Phase Rotation Indicators from Fluke.
Page: **1567**



sumida

Power Inductors

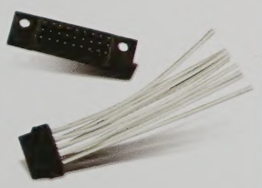
These power inductors impede the flow of current/voltage in AC circuits, allowing the short-term storage of power.
Pages: **705, 706**



VISHAY

Low Profile SMD Inductors

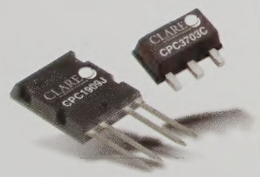
IHLP4040DZ and the IHLP2525AH handle high-transient current spikes without saturation.
Page: **710**



HARWiN

2mm Datamate Connectors

The Datamate range is a professional connector system that sells at commercial prices.
Pages: **1014, 1015**



CLARE
An IXYS Company

OptoMOS® and Power Solid State Relays

The OptoMOS® line of solid state relays delivers fast, reliable, bounce-free switching in a compact design.
Page: **1261**

molex

Serial ATA (SATA) Connectors

Allows products to create, store, and distribute vast amounts of data with higher speed in a smaller form factor.
Page: **883**

New Technologies highlight

NEW! TECHNOLOGY

Here are just a few of the new technologies added.
For a complete listing of all new technologies go to:
www.mouser.com/newtechnologies

All new technology products can be identified by a **RED** banner on the outside of the page or a new technology logo by the part.

OMRON
ELECTRONIC COMPONENTS

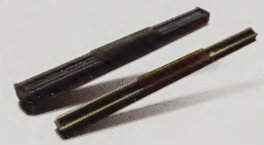
Optical Network Devices

These new devices turn recent theory into real solutions for tomorrow's high-speed, free-space fiber/data communication links.
Page: **1357**

Pomona ELECTRONICS

XLR Triple Binding Post Adapters

This new adapter makes it easy to split signals from the 3 XLR audio conductors via 5-way binding posts.
Page: **824**

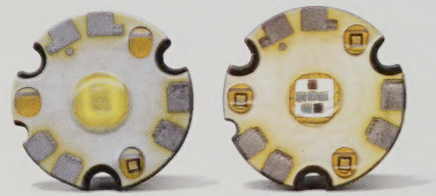


JAE

MicoDimm Connector

This WA6 Series is the new DDR2 MicroDimm standard.

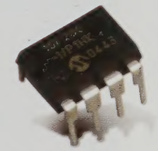
Page: **1019**



lamina

BL-4000 Light Sources

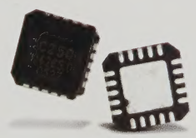
The BL-4000 is the brightest and smallest RGB light source available and is designed for optimal color mixing.
Page: **55**



MICROCHIP

PIC10FXXX MCUs

These MCUs feature high-performance RISC CPU and Low-Power CMOS Technology.
Page: **134**



Chipcon

CC1100 & CC2500 RF Transceivers

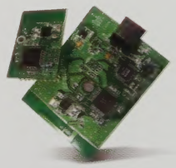
These two low-cost RF transceivers offer superior performance and low-power consumption in a tiny package.
Page: **115**

Amphenol®

RADSOK® Power Bus Connectors

Higher power in a smaller package.

Page: **930**



DLP Design

IEEE 802.15.4/ZigBee™ Modules

DLP Design is pleased to announce the forthcoming DLP-RF1 and DLP-RF2 2.4GHz, ZigBee™ ready transceivers.

AMULET TECHNOLOGIES Graphical Display Solutions

Amulet Technologies

ulet Technologies offers graphical display solutions that include controller boards and LCD modules. All feature the patent-pending Amulet Graphic Operating System (OS) chip (also sold stand-ne). All offer easy hardware integration path from prototype to production. The chip includes a dedicated GUI microprocessor, LCD controller, and graphical library. The GUI is visually created h HTML based development tools for rapidly creating good looking and feature-rich graphical user interfaces (GUI's). Amulet's expertise is graphical LCD integration and control.

Amulet Technologies

GRAPHICAL OS LCD STARTER KIT - The fastest path for integrating a graphical user interface (GUI) into embedded products.

671-STK-AOB3202405
Starter Kit Shown

STK-AOB3202405 Kit Contains:
- 5.7" 1/4 VGA Monochrome Display
- White LED Backlight
- Fully Integrated Analog Touch Panel
- Amulet's Graphical OS Chip fully integrated on the back of the display
- Graphical OS Development Software
- 5VDC Power Supply
- Serial Cable
- Stylus Pen
- Programmable Interface Board

STK-GT380 Kit Contains:
- MKGT380B Display
- 3.8" 1/4 VGA STN Blue Monochrome Display
- Bright-white LED Backlight
- Fully Integrated Analog Touch Panel
- AC Adapter Power Supply
- LCD Controller Board with Graphical OS Controller Chip
- Graphical OS Development Software & Compiler
- Serial Cable
- Stylus Pen

Use these starter kits to evaluate the GRAPHICAL OS hardware and software, and to create the user-interface for your end product. Then use the module kits, controller boards, and Graphical OS controller chip to go from prototype-to-production (below).

MOUSER STOCK NO.	Description	Price Each
671-STK-GT380	Starter Kit with MK-GT380B display and AC power adapter	329.00
671-STK-AOB3202405	Starter Kit with MK-AOB3202405X module and 5VDC power supply	399.00

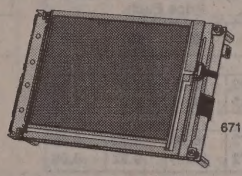
Amulet Technologies

GRAPHICAL OS LCD MODULE KIT - The most complete LCD solution for production.

t Contains:
4 VGA Monochrome Backlit Display
lly Integrated Analog Touch Panel
CD Controller Board with Graphical OS Controller Chip

OTE: If purchasing an above unit for evaluation, you will also d to purchase a Program Interface Board **(PIB-1)**. These dules require a 5V power supply **(SAD105-SF5C)** if you do already have a 5V power supply.

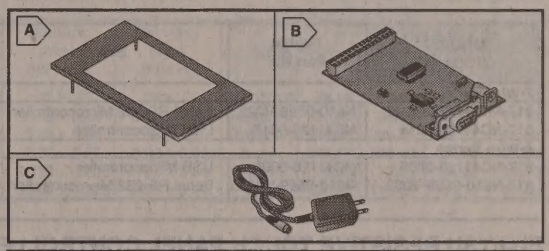
elopment software can be purchased separately (below).



671-MK-GT570-A
Shown

MOUSER STOCK NO.	Description	Price Each
671-MK-GT380B	3.8" STN Blue Display with bright-white backlight	239.00
671-MK-GT380T	3.8" FSTN Transflective Display with bright-white backlight	239.00
671-MK-AOB3202405T	5.7" Transflective Graphic Display and 5VDC power supply	279.00
671-MK-AOB3202405B	5.7" Blue Transmissive Graphic Display and 5VDC power supply	279.00
671-MK-AOB3202405N	5.7" Negative Transmissive Graphic Display and 5VDC power supply	279.00

ACCESSORIES FOR LCD MODULES

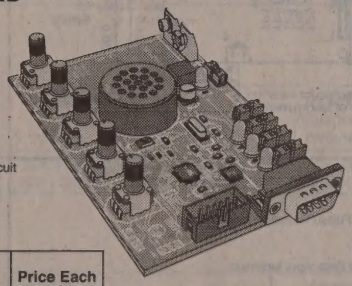


MOUSER STOCK NO.	Fig.	Description	Price Each
671-BZ-AOB5	A	Bezel Kit for 671-MKAOB3202405X	24.95
671-PIB-1	B	Prog. Interface Board for Amulet On-Board Modules	30.00
671-SAD105SF5C	C	5VDC Supply for AMlet Modules	10.00

Amulet Technologies

I/O SIMULATOR BOARD

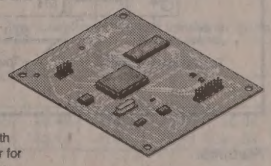
se the I/O Simulator Board to rapidly evaluate and st your Easy GUI Graphical User Interface Designs! llows testing of your UI, independent of your embedded micro imulates your embedded micro S232 interface to Graphical OS display products seful debugging tool cludes Atmel AVR Micro, switches, potentiometers, LED's and audio circuit VR is programmed and ready-to-go reat educational tool!



MOUSER STOCK NO.	Description	Price Each
1-IO3001	I/O Simulator Board	99.00

GRAPHICAL OS LCD CONTROLLER BOARD - The quickest path for taking a graphical LCD from prototype-to-production.

Features:
- Serial Interface
- Touch Screen Decoder
- Graphical OS Controller Chip
- Supports Single-Scan Monochrome Displays up to full-VGA resolution



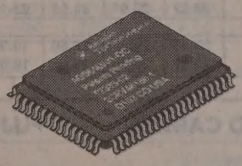
The CB-GT570 controller board can be used with 3.3- or 5.0-volt displays and includes an inverter for a CCFL backlight. Development software can be purchased separately (below).

MOUSER STOCK NO.	Description	Price Each
671-CB-GT570	6.5" x 4.25" Controller Board	179.00

Amulet Technologies

GRAPHICAL OS CONTROLLER CHIP

mbination LCD Controller and user-interface engine makes it easy to grate LCD's into embedded products that use 8/16/32-bit micros and DSP's. places traditional LCD controller chip. Eliminates need for complex code to w each pixel on LCD. Chip renders graphical user interface (GUI) pages taining graphic images, widgets, and other UI objects directly to LCD. Works single-scan, monochrome displays, up to full VGA. Rapidly create GUI g HTML-based development platform. Development software can be chased separately (below) or comes bundled with Graphical OS Starter Kits ove).



MOUSER STOCK NO.	Description	Price Each			
		1	100	500	1000
1-AGB64LV01-QC	Combination LCD controller & user interface chip	30.00	29.00	28.00	27.00
1-AGB64LV01-QC-E	LCD controller chip - Pb free	30.00	29.00	28.00	27.00

Amulet Technologies

GRAPHICAL OS DEVELOPMENT SOFTWARE

For use with Graphical OS Controller Chip, LCD Controller Boards, or LCD Modules. Includes Amulet Operating System, HTML-Compiler with built-in flash programmer, Windows Font Converter, Protocol Simulator, and all user help documentation, plus an evaluation version of a web page authoring tool. Enables you to quickly and easily create feature-rich graphical user interfaces (GUI's) for embedded systems, using web page editing tools. Compiler then compresses HTML, GIF, and JPEG files and converts them to Amulet μHTML pages. Includes widgets for creating UI objects such as bargraphs, lineplots, check boxes, function buttons, radio buttons, text strings, numeric fields, etc.

MOUSER STOCK NO.	Description	Price Each
671-UHT-CS1	Amulet compiler software.	99.00

FUJITSU LCD Touch Panels and Accessories

FUJITSU

FUJITSU TOUCH PANELS

Features:

- Superior long life using a unique construction method offering improved life over typical technologies; by sensing data input only on the glass layer typically a 10x improvement in product life is achieved.
- Excellent specification and high quality
- Anti-Newton ring technology
- High reliability materials
- 1.1mm glass with AG topcoat

FUJITSU RESISTIVE TOUCH PANEL CONTROLLER ICS

Features:

- High quality and reliability touch panel controller
- Serial Interface (RS-232)
- Used to control the 7-Wire resistive touch panels
- 64 pin PQFP MCU with masked ROM

For quantities of 250 and up, call for quote.

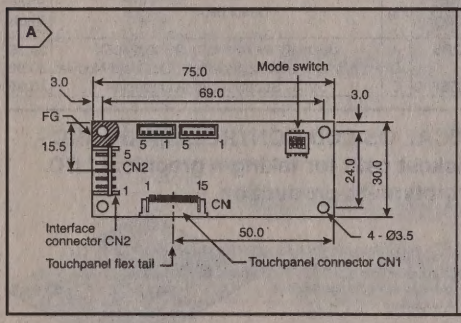
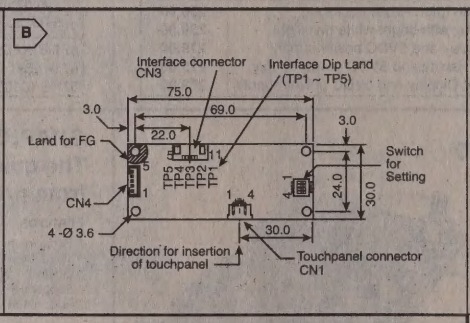
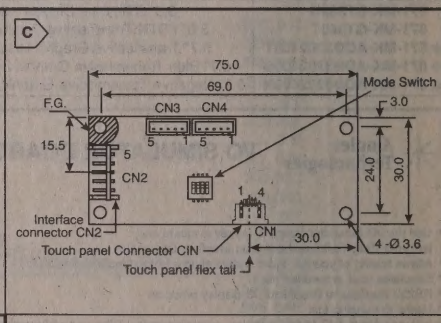
FUJITSU RESISTIVE TOUCH PANEL CONTROLLER BOARDS





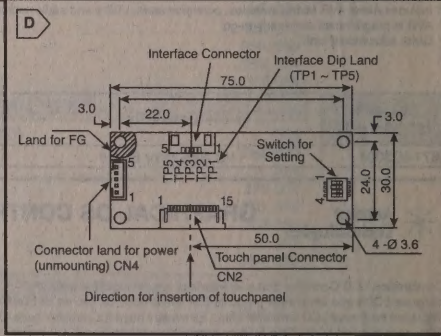


Features:

- Small footprint PCB
- Supports all major OS types with Fujitsu Driver software
- A complete solution for quick prototype to production use or as a design tool to speed up application and compatibility testing

Main Applications:

- For use with any of the Fujitsu Resistive Touch Panels
- Point of Sale devices
- Access terminals
- Monitoring Systems and Data input terminals



For quantities of 250 and up, call for quote.

FT LCD MODULES

trex America's TFT (thin film transistor) flat panel displays are rugged, high performance modules designed for the most nanding non-PC applications. They deliver best-in-class, front-of-screen performance with wide viewing angles, powerful cklights and exceptionally high contrast, color saturation and luminance for a range of non-PC applications. These modules exceptionally rugged – and can operate reliably over wide temperature ranges.

trex America's TFT modules are ideally suited for the requirements of the industrial, medical, multimedia and trumentation markets. Applications include diagnostic equipment, industrial control equipment, POS displays, sks, ATMs, and amusement/entertainment systems.

Natural Color Matrix (NCM) Technology

CD TOOLKITS™

trex, the LCD Total Solution Provider, has introduced its new LCD ToolKIT™, which provides a convenient kit solution that speeds design and saves engineering and procurement e for developers of products using flat panel displays. Optrex's LCD ToolKIT™ contains everything you need to operate the included TFT display right out of the box. Supports A, composite video, and S-video interfaces. Included in the LCD ToolKIT are: LCD panel; TFT controller board with on-screen display board; backlight inverter board; inverter wer cable; 12V DC power supply; power supply AC line cord; VGA (analog RGB) cable; 3-ft. video input cable; and a Quick Set-up and document CD-ROM. IT'S ALL IN THE BOX!

A LCD ToolKITs™ – 8.4" and 10.4" (Resolution: 640 x 480)
A LCD ToolKITs™ – 8.4" and 15.0" (Resolution: 1024 x 768)
pport VGA (Analog RGB), composite video, and S-video interfaces

MOUSER STOCK NO.	Optrex Part No.	LCD Size	Resolution	Price Each
805-TK150X00	TK150X00	15.0"	1024 x 768 XGA	746.89
805-TK104V01	TK104V01	10.4"	640 x 480 VGA	665.00
805-TK084X01	TK084X01	8.4"	1024 x 768 XGA	749.00
805-TK084V00	TK084V00	8.4"	640 x 480 VGA	632.55

t Includes:

- TFT Panel
- TFT Controller Board with On-Screen Display (OSD) Board
- Backlight Inverter Board
- Inverter Power Cable
- Power Supply AC Line Cord
- VGA (Analog RGB) Cable
- 3 ft. Video Input Cable (S-Video/Composite)
- LCD-to-controller-board interface cable
- CD-ROM with Quick Set-Up Guide and controller manual

RAPHIC MODULES

trex color and monochrome STN (super twisted nematic) graphic modules offer a wide range of sizes and display mats to satisfy virtually any application. Extensive array of color/background combinations, with high brightness, h contrast, low power consumption, and LED or CCFL backlights. New Highly Reflective models feature crisp, ar black graphics on a silvery, "winter white" backgrounds, providing exceptional clarity, sharpness and readability ll types of ambient lighting conditions. Serial or parallel interface options and economical Chip-on-Glass (COG) nstruction available.

LCD Modules

OPTREX CHARACTER LCD MODULES

Optrex offers the broadest range of monochrome character LCD modules in a wide range of dot pixel formats and color/background combinations in industry standard configurations. High contrast, wide operating temperature range, low operating current, and more luminance per watt. Positive (transflective) types and negative (transmissive) types utilizing Optrex's High Performance Color technology are available.

New Highly Reflective models feature crisp, clear black characters on a silvery, "winter White" background, providing exceptional clarity, sharpness and readability in all types of ambient lighting conditions. If you need a monochrome character LCD for your information display, Optrex has the right one for your application.

JEM INNOVATIONS CHARACTER LCD MODULE EVALUATION AND DEVELOPMENT PLATFORM

The EDP-I is designed for evaluating LCD modules without having to lay out your own design.
It provides pinouts for the most popular modules in the industry and an easy to use keyboard interface.

What you need for this Platform:
- Character Display of your choice
- 0.1in Board mount Sockets and Headers
- PS/2 Style PC Keyboard
- 5VDC Power Supply (418-TR1505)

Please Note: Backlight current is different from modules to modules. Consult the data sheet for your LCD module and use R14 for installing a current limiting resistor. The user guide will explain this.

SEIKO INSTRUMENTS Graphic & LCD Display Modules

SII Seiko Instruments

GRAPHIC DISPLAY MODULES

These graphic modules offer the greatest flexibility in formatting data on the display. They allow for text, graphics or any combination of the two. Since character design is defined by software, they allow any language or character font to be shown. The only limit is the resolution of the display. graphic modules are organized in rows as defined by software, they allow any language or character font to be shown. The only limit is the resolution of the display. graphic modules are organized in rows (horizontal) and columns (vertical) of pixels. Each pixel is addressed individually allowing any combination to be "on". This bit mapping provides the user with the ability to construct text of any size or shape or true graphics if that is desired. Seiko Instruments offers resolutions from 128x32 up to 320x240.

G1213 Illustrated
(128 x 32 Dot Pixels)

Features:

- STN & FSTN technology offers excellent contrast and wide viewing angle.
- Thin, lightweight, with low power consumption
- CFL backlight offers high brightness and long life
- Built-in controller available on some models
- 4-bit parallel interface except for G1213 and G1216 (8-bit)

Specifications:

- Power supply voltage (VDD): Standard Modules +5.0V
  Chip-On-Glass Modules +3.3V
- Operating temperature: (G1213, G1216, G191D) = -20°C ~ +70°C
  (G321E) = 0°C ~ +50°C
- Storage temperature: (G1213, G1216, G191C) = -30°C ~ +80°C
  (G321E) = -20°C ~ +60°C

LCD DISPLAY MODULES

These character modules contain many features designed to simplify their use and enhance a variety of applications. Different sizes, fluids and backlight options allow us to assist our customers to choose the best combination for their needs. Character modules are organized in blocks of 5 x 8 dots. This allows them to display alphanumeric characters to 4 lines of 40 characters. Each model is available with either Super Twist Nematic (STN) or wide temperature STN (WTSTN) fluid for enhanced viewing characteristics. EL or LED backlighting is an option for most models.

Features:

- Thin, lightweight, low power
- STN fluid for high contrast and wide viewing angle
- Built-in controller

VARITRONIX Graphic Display Modules

OLED GRAPHIC DISPLAY MODULES

Organic light emitting display (OLED) is a new generation display technology. The biggest appeal lies in its self-luminance, excellent brightness & contrast, wide viewing angle, fast response, low driving voltage and full color. OLEDs are self-emitting devices which do not need any back- or front-lighting. They are extremely thin, lightweight. They have very fast response time and consume little power. OLEDs are ideal for application in portable electronics.

Features:

- Self-luminance: power saving
- Very fast response time: less than 1ms
- Wide viewing angle: 160 degree
- Excellent brightness & contrast: readable under sunlight
- Monochrome and Multi Color capability
- Ideal for small to middle size display: car audio, dashboard, PDA, cellular, and instrument

CATALYST SEMICONDUCTOR, INC. WHITE LED DRIVERS

The CAT3200 series LED Drivers are switched capacitor boost converters that deliver a low noise, regulated output voltage. The CAT3200 has an adjustable output using external resistors. The constant frequency 2MHz charge pump allows small 1µF ceramic capacitors to be used.

- Constant high frequency (2MHz) operation
- 100mA output current
- Regulated, adjustable output voltage
- Low quiescent current (1.7mA typ.)
- Input voltage operation down to 2.7V
- Soft start, slew rate control
- Thermal overload shutdown protection
- Low value external capacitors (1µF)
- Foldback current overload protection
- Shutdown current less than 1µA

For quantities of 500 and up, call for quote

CATALYST SEMICONDUCTOR, INC. DESIGN TOOLS

The CAT32EVAL1 gives the user a way to evaluate the CAT32 in a typical application of driving multiple LEDs. The board offers to the user the possibility to connect a different number of LEDs to the CAT32 output. The CAT32EVAL1 engineering evaluation PCB will speed an engineers' evaluation of the CAT32. Efficiency measurements, dimming circuit evaluation plus much more can be accomplished with the CAT32EVAL1 PCB. The board also demonstrates the CAT32 shutdown mode and LED brightness control by using an external PWM signal or DC voltage.

The evaluation board contains a CAT32 DC-DC boost converter and an array of white LEDs. As configured, the circuit is set to drive up to 2 banks of 4 series LED arrays. However, the user can chose a wide variety of other LED configurations using different jumper options.

For quantities of 5 and up, call for quote

Supertex EL BACKLIGHTING DRIVER INTEGRATED CIRCUITS AND DEMO BOARDS

Applications:

- Pagers - HV830, HV826, HV850
- Portable instrumentation - HV830, HV809, HV850
- Global Positioning Systems (GPS) units - HV830, HV857, HV833
- LCD backlighting - HV857, HV833
- Mobile cellular phones - HV857, HV826, HV830, HV850
- PDAs - HV830, HV857, HV833, HV809
- Wireless handheld - HV857
- Portable Transceivers - HV833, HV826, HV850
- Remote Control Units - HV833, HV826
- Calculators - HV833, HV826
- Electronic personal organizers - HV830, HV809
- Display Signs - HV809
- Processed with HVCMOS® technology - HV830, HV809
- DC to AC conversion - HV830, HV833, HV826, HV850
- Enable/disable function - HV830, HV833
- Patented output timing for high efficiency - HV857, HV833
- Output voltage regulation - HV857, HV833, HV826
- Split supply capability - HV857, HV833
- MP3 players - HV850
- Watches - HV850

HV809 Features:
Input voltage up to 200V DC, 400V peak-to-peak output voltage, output load up to 350nF (100 in2 for 3.5nF/in² lamp), adjustable output lamp frequency, adjustable On/Off pulsing frequency.

HV826 Features:
1.8V to 3.5V operating supply voltage, adjustable output frequency, adjustable switch frequency.

HV830 Features:
2.0V to 9.5V operating supply voltage, 200V peak-to-peak typical output voltage, large output load capability – typically 50nF connectors, permits the use of high-resistance elastomeric lamp lamp life, and power consumption, adjustable output lamp frequency to control lamp color, adjustable converter frequency to eliminate harmonics and optimize power consumption, Low current draw under no load condition, Very low standby current – 30nA typical.

HV833 Features:
1.8V to 6.5V operating supply voltage, separately adjustable lamp and converter frequency, <100nA shutdown current.

HV850 Features:
Designed to drive EL lamps of up to 2.0 in², with capacitive values up to 4.5nF, no external components needed when using an external EL clock frequency, low noise and enable function

HV857 Features:
Patent pending audible noise reduction, patent pending lamp aging compensation, wide input voltage range 1.8V to 5.0V, 190VPP output voltage for higher brightness, single cell lithium ion compatible, 150nA shutdown current, separately adjustable lamp and converter frequencies.

For quantities greater than listed, call for quote

ZETEX SEMICONDUCTORS LED/LCD DRIVER SOLUTIONS/LIGHTING ICS

The inherent flexibility of the ZXSC circuit means that parallel or series LEDs can be driven depending on application needs. A simple modification to the application circuit means that the maximum pulse current can be programmed to match the characteristics of the chosen LED load, and pulse current in the range 10mA to 3A and beyond can be easily achieved.

Supertex LED DRIVER INTEGRATED CIRCUITS AND DEMO BOARDS

♦Surface Mount Device

Applications:

- Accent lighting - CL2
- Automotive - HV9910, HV9930, CL2
- Backlighting of flat panel displays - HV9910
- Battery powered LED lamps - HV9930
- Cellular phones - HV9903
- Chargers - HV9910
- Color LCD Backlighting - HV9903
- Constant current sink - CL2
- DC/DC or AC/DC LED Driver applications: HV9910, HV9930
- Digital cameras - HV9903
- Electronic personal organizers - HV9903
- General purpose constant current source - HV9910, CL2
- Industrial lamp indicators - CL2
- LED driver - HV9903, HV9910, HV9921, HV9922, HV9930, CL2
- Low power lighting fixtures - HV9921/HV9922
- MP3 players - HV9903
- PDAs - HV9903
- RGB backlighting LED driver - HV9910, HV9930
- Signage and decorative LED lighting - HV9910, HV9921, HV9922, CL2

LED Driver IC Demo Boards

MOUSER STOCK NO.		Description	Price Each
Mfr.	Mfr. Part No.		
689—HV9903DB1		Contains all the necessary circuitry to demonstrate the features of the HV9903 white LED driver	70.00
689—HV9910DB1		Off-line, high brightness LED driver demo board. It contains all the necessary circuitry to test the performance of the HV9910 as a constant current driver to drive a string or mutliple strings of LEDs	198.00
689—HV9910DB2		Universal off-line high brightness LED driver demo board. The board can be used to test the performance of HV9910 as a constant driver to power a string or multiple strings of LEDs	150.00
689—HV9910DB3		Low voltage, high brightness LED driver demo board. The board can be used to test the performance of the HV9910 as a constant driver to power LEDs	108.00
689—HV9910DB5		Universal input, phase dimmable, single high brightness LED driver demo board. The board is a high brightness LED power driver to supply one high brightness LED using the HV9910 driver IC from either 100V or 220VAC supply. It is ideal for incandescent retrofit applications.	150.00
689—HV9921DB1		Universal off-line LED driver demo board. The demo board is a complete LED power driver to supply a string of string of LEDs usin the HV9921, an integrated 3-pinhigh input voltage constant-current buck regulator IC	130.00
689—HV9922DB1		Universal off-line LED driver demo board. The demo board is a complete LED power driver to supply a string of string of LEDs usin the HV9922, an integrated 3-pin high input voltage constant-current buck regulator IC	130.00
689—HV9930DB1		High brightness LED driver demo board. The board uses an LED driver that is capable of driving up to 7 1-watt LEDs in series from an automotive input of 9 to 25 VDC. The demo board uses Supertex's HV9930 in a boost-buck topology.	150.00
689—HV9930DB2		High brightness boost-buck LED driver demo board. The demo board uses an LED driver that is capable of driving 4 3-watt LEDs in series from an input of 9 to 25 VDC. The demo board uses Supertex's HV9930 in a boost-buck topology.	96.00

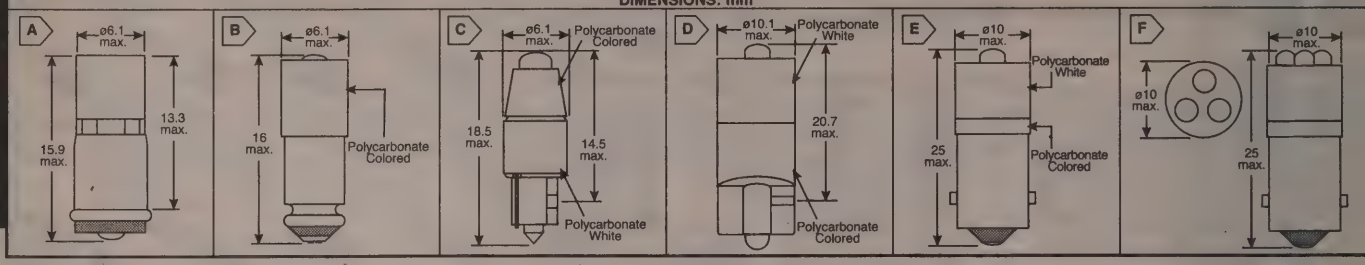
CHICAGO MINIATURE Incandescent Replacements

CML INNOVATIVE TECHNOLOGIES
WHERE INNOVATION COMES TO LIGHT

DIMENSIONS: mm



Features:
- Extremely High Brightness with Low Current Draw
- Low Heat Generation
- Shock and Vibration Proof
- Five Standard Colors

Specification:
- Long Life: 100K Hours vs. 10K Hours
- Storage Temperature: -25°C to +80°C
- Ambient Temperature: -20°C to +60°C

For quantities of 1000 or more, call for quote.

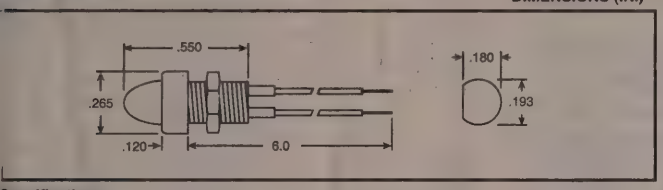
CHICAGO MINIATURE Indicators and Lamp Holders

ASTROLITE LED INDICATORS

DIMENSIONS (IN.)



Specifications:

- Mounting hole: .193"
- Mounting centers: .334" min.
- Panel thickness: .188"
- Bezel/Shank: chrome plated brass
- Hex nut: nickel plated brass
- Wire leads: 26AWG stranded, 105°C PVC insulation

For quantities of 500 or more, call for quote.

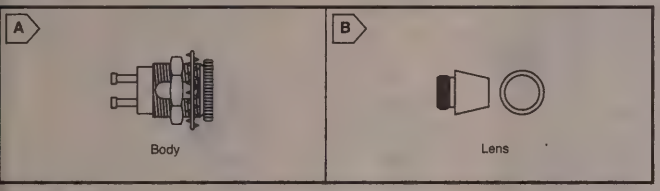
GEMLITE SUBMIDGET INDICATORS



Specifications:

- Mounting hole: .313"
- Mounting centers: .469" min.
- Panel thickness: .218" max.
- Lockwasher: nickel plated bronze
- Hex nut: nickel plated brass
- Lens: high temperature lexan
- Lens shank: nickel plated brass
- Housing material: black nickel plated brass
- Electrical rating: up to 30V, up to 1W

For quantities of 500 or more, call for quote.

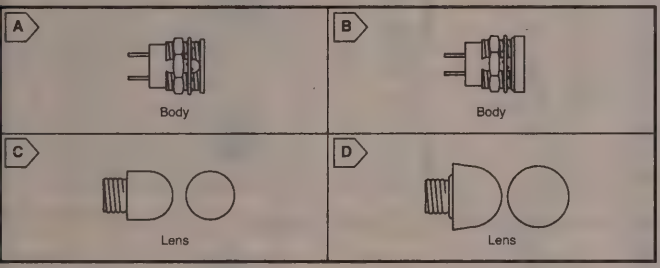
MIDGET FLANGE RELAMPABLE INDICATORS



Specifications:

- Mounting hole: .484"
- Mounting centers: .750" min.
- Panel thickness: standard=.265" watertight=.188"
- Terminals: tin plated brass
- Housing material: black anodized alum.
- Hex nut/lockwasher: chrome treated steel
- O-rings (5139 only): neoprene
- Electrical rating: up to 30V, up to 2W
- Lens: high temperature lexan

For quantities of 500 or more, call for quote.

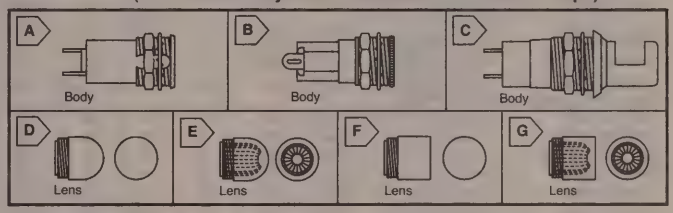
T-2 AND T-3 1/4 MINIATURE RELAMPABLE INDICATORS

(For use with Bayonet Incandescent and Neon Lamps)



Specifications:

- Mounting hole: .688"
- Mounting centers: .969" min.
- Panel thickness: .406" max.
- Lockwasher: chromate treated steel
- Housing material: 5100 Series - glass filled polyester
  5200 Series - phenolic
  900-200 Series - black anodized aluminum
- Hex nut: zinc plated steel
- Lens (5100 and 5200 Series): high temperature lexan

KINGBRIGHT SMD LED Lamps

Kingbright
An ISO 9002 & QS 9000 Company

XPOWER

Features:

- Low heat resistance
- High power light source taking up very little space
- Can be processed using the standard soldering techniques
- Lifetime up to 100,000 hours
- No heat sink required
- 10x10mm size
- Up to 100cd 350mA operating current

∗∗ Luminous intensity with asterisk is measured at 50mA.

Kingbright BLUE AND WHITE LED LAMPS

This new series offers a brighter version of the blue or white LED's without the high costs that is associated with the Super Bright Blue or white LED's.
This offers our customers the more popular sizes and lens colors that have been requested at a modest cost.

LAMINA LED Light Sources and Accessories

Lamina's innovative LED arrays provide a revolutionary improvement in the LED market by creating the highest density packaging of discrete LED die. Developed using Lamina's multilayer Low Temperature Co-Fired Ceramic on Metal (LTCC-M) technology.

Thermal performance is the key to achieving high luminous densities, high reliability and long life. Lamina's LTCC-M packaging allows LED devices (dies) to be mounted directly to an engineered metal core without sub-mounts. This creates the optimum thermal path to conduct heat away from the LED device. The result is that multiple devices can be located in close proximity while maintaining target LED junction temperatures.

Typical Applications:

Architectural Lighting:
- Decorative and accent
- Cove and under-shelf
- Step lighting
- Garden and pathway

LCD Backlight:
- Computer displays
- Heads up displays

Automotive:
- Interior
- Dashboard backlight
- CHMSL (Third brake light)

Signals and Signage:
- Airfield taxiway
- Traffic
- Security
- Beacons
- Rail

Task Lighting:
- Medical lights

LAMINA BL-2000 DISCOVERY KIT

Lamina's "Discovery" kit contains ALL necessary components to allow the customers to "plug and play." It contains light engines, solder, wire, heatsinks, powersupplies, screws, and thermal interface tapes to make it simple for you to learn and interact with Lamina BL-2000 light engines.

Kit contains the following parts:
- One each of the BL-2000 single color light engines. (Red, Amber, Blue, Green, White)
- Two Heatsinks
- 10 each of White and Black Jumper Wires
- 10 Thermal Interface Tapes
- One 24VDC 1.05A Power Adapter
- One Voltage Board Regulator
- Hardware

SURFEELEDS™ DEMO-BOX

The new Surfeeleds Demo Box is a tool specifically designed to help you design in surface mount LEDS. Besides being able to light up the SMDs for an exhilarating visual effect, enclosed in each Demo Box is a mini CD Rom, that gives you a virtual image of the open box. Just click on the part of your choice and the specs of that SMD LED pop up in a pdf format. Also incorporated in each box is a through-hole LED tester box with various currents, to aid design engineers.

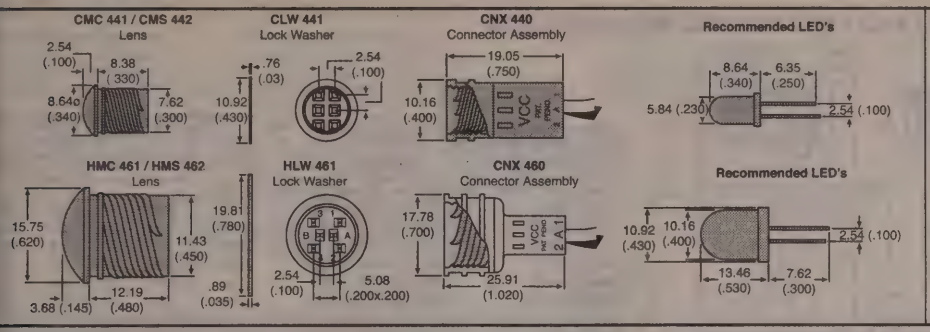
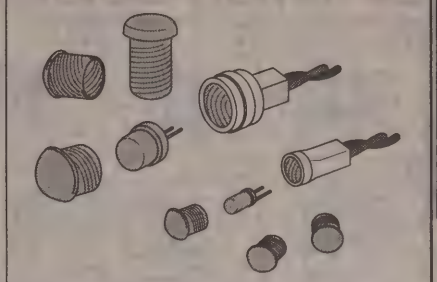
MOUSER ELECTRONICS a tti company

VCC LED Lenses and Mounting Components





CABLE ASSEMBLIES FOR 5MM AND 10MM LED LIGHTS

Features:

180° viewing angle for LED that have 20 to 20K mcd.
Lens threads into holder for easy assembly
Sealed style exceeds NEMA 4 for dust, water and ice.

Additional Options:

Can be made with 3 or 4 wire configuration.
24 AWG stranded wire is standard, 22 AWG wire upon request.

Pre-wired Solderless LED Holders - Twist Fit

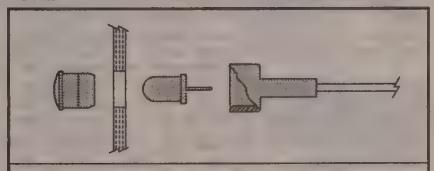
PRE-WIRED SOLDERLESS LED INTERCONNECTIONS

Material Specifications:

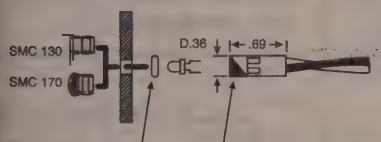
- Panel connector socket and ring: thermoplastic
- Header connector: thermoplastic (UL Listed materials)
- Terminals: phosphor bronze, tin plated
- Wire: 22AWG, 7 strand copper, insulated

Electrical Specifications:

- Terminal: 3A continuous service
- Unique three-finger design mates to round, square, or rectangular leads .017" to .025"



Insert LED into connector. Install lens in panel opening. Press connector and lens together.



For quantities of 1000 and up, call for quotation.

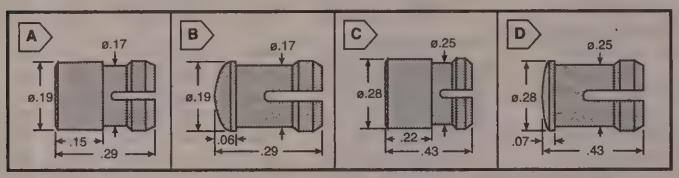
CLIPLITE AND CUBELITE LENS MOUNTS FOR T1 AND T1 3/4 LEDS



Features:
- Provides viewing angles up to 180°
- High contrast and visibility
- Provides an easy snap-mount method for mounting LEDs through the front panel
- Protects the LED from physical damage from electrostatic discharge (ESD), up to 16KV
- Lens mounts utilize striated lines and fresnel rings to increase apparent brightness up to 125%

Specifications:
- Lens material: polycarbonate

For quantities of 1000 and up, call for quote.

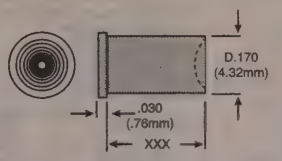
VCC LED Lenses and Mounting Components

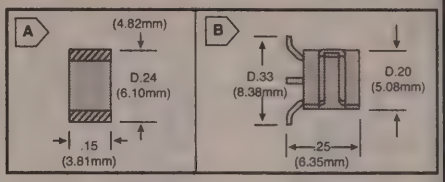
LIGHTPIPES WITH SURFACE MOUNT LED

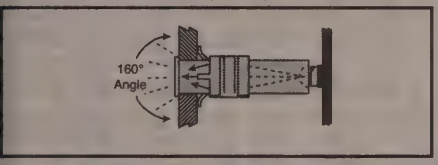
Material Specifications:
- Litepipe: Acrylic (optical grade)
- Grommet: Polyethylene (black)
- Spring Clip: Spring steel, Nickel plated

Material Specifications:
- Surface mount, vertical and horizontal 3mm LEDs, litepipes for blending multicolor LEDs are available on special request.

Mounting Specifications:
- Panel hole: Round .171" Dia. (4.32mm)
- Panel thickness: .062" min. (1.57mm)
- Lightpipes from .200" to .500" use grommet retainer
- Lightpipes from .500" to 2.00" the spring clip is recommended for rigidity







Lightpipes

LITEPIPES

Litepipes easily provide a means of transmitting the light from PCB mounted LEDs to the front display panel. Both styles of LEDs (surface mount and standard packages) can be displayed in this manner. The litepipe by itself has a limited angle of view. However, when used with VCC's fresnel lens, the light is disbursed over the entire lens surface producing 180° of viewing.

Material Specifications:
- Litepipe: acrylic (optical grade)
- Lens: polycarbonate; ring: polypropylene (UL Listed Material)

Mounting Specifications:
- **3mm:** mates with lens SMB 200. Panel mounting hole .171 (4.3mm) on 1/4" centers. Panel thickness 1/32" to 1/8". Litepipe lengths from .200" to 1.200".
- **5mm:** mate with lens CLB 300 and SQB 400. Panel mounting hole .250 (6.35mm) on 3/8" centers. Panel thickness 1/32" to 1/4". Lengths from .360" to 1.360". For panels less than 3/16" use SPC 125 spacer.

Standoff Specifications:
- Use VCC's standoff to adjust the height of a standard LED above the PCB and maintain a maximum .050" clearance between litepipe and LED.

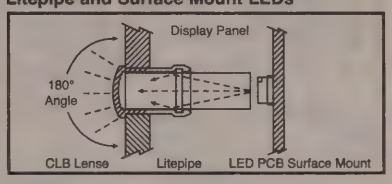
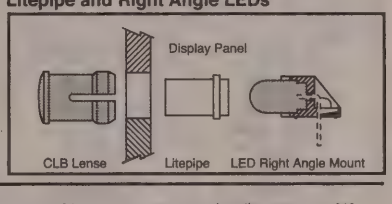
Litepipe and Surface Mount LEDs



Litepipe and Right Angle LEDs



PCB STANDOFFS FOR BI AND TRI-LEAD COMPONENTS

Standoffs are designed for printed circuit board mounting of multi-lead devices ie. LEDs. They cope with various problems in mounting passive components. They include height control, lateral stability, lead retention, lead shorting, and solder flux removal. Device height control is simplified with mounts ranging in lengths from .12" to 1.0"

- Material: thermoplastic (black) UL 94V-0

ACCESSORIES

MOUSER STOCK NO.	DLC Part No.	Description	Price Each 1	Price Each 5
543-FAY-LMT-38	FAY-LMT-38	0.375" Laser Mount (Mini Module)	33.95	31.92
543-FAY-LMT-50	FAY-LMT-50	0.5" Laser Mount (Standard Module)	36.78	34.58
543-FAY-LMT-75	FAY-LMT-75	0.75" Laser Mount (Industrial Module)	45.65	42.56
543-CLB-RKT-50	CLB-RKT-50	Industrial Cable, 5 Meter	17.50	15.96

CAUTION
LASER LIGHT - DO NOT STARE INTO BEAM
PEAK POWER <1mW
CLASS II LASER PRODUCT
DANGER
LASER LIGHT - AVOID DIRECT EYE EXPOSURE
PEAK POWERS 1.0 mW - 30mW
CLASS IIIa, IIIb LASER PRODUCT

EVERLIGHT Opto Components

NEC / CEL Optocouplers

NEC CEL California Eastern Laboratories

pplications:
an be used as an interface circuit for various instrumentations and ntrol equipment in the following:
- AC line/digital logic
- Digital logic/digital logic
- Twisted pair line receiver
- Telephone/telegraph line receiver

Features:
- High isolation voltage
- High current transfer ratio
- Low cost
- High speed switching

Safety standard: UL = UL Recognized (UL File No: E72422(S))
UL/CSA = UL Recognized & CSA Approved
UL File No.: E72422(S)/CSA File No.: CA101391
UL/VDE = UL Recognized & VDE Recognized

All of these devices are available in leaded and lead-free versions
Lead-free versions are denoted by a "-A" at the end of NEC's part number.
Please contact your sales representative if you need assistance.

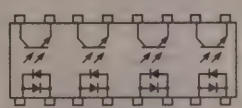
F



NEC / CEL Optocouplers

NEC CEL California Eastern Laboratories

Applications:
Can be used as an interface circuit for various instrumentations and control equipment in the following:
- AC line/digital logic
- Twisted pair line receiver
- Digital logic/digital logic
- Telephone/telegraph line receiver

Features:
- High isolation voltage
- High current transfer ratio
- Low cost
- High speed switching

Safety standard: UL = UL Recognized (UL File No: E72422(S))
UL/CSA = UL Recognized & CSA Approved
UL File No.: E72422(S)/CSA File No.: CA101391
UL/VDE = UL Recognized & VDE Recognized

All of these devices are available in leaded and lead-free versions Lead-free versions are denoted by a "-A" at the end of NEC's part number. Please contact your sales representative if you need assistance.

NEC / CEL Optocouplers

NEC CEL California Eastern Laboratories

Applications:
Can be used as an interface circuit for various instrumentations and control equipment in the following:
- AC line/digital logic
- Twisted pair line receiver
- Digital logic/digital logic
- Telephone/telegraph line receiver

Features:
- High isolation voltage
- High current transfer ratio
- Low cost
- High speed switching

Safety standard: UL = UL Recognized (UL File No: E72422(S))
UL/CSA = UL Recognized & CSA Approved
UL File No.: E72422(S)/CSA File No.: CA101391
UL/VDE = UL Recognized & VDE Recognized

All of these devices are available in leaded and lead-free versions
Lead-free versions are denoted by a "-A" at the end of NEC's part number.
Please contact your sales representative if you need assistance.

IrDA -ENCODER/DECODER

The TOIM4232 Endec IC provides proper pulse shaping for the SIR IrDA front end infrared transceivers as of the 4000-series. For transmitting the TOIM4232 shortens the RS232 output signal to IrDA compatible electrical pulses to drive the infrared transmitter. In the receive mode the TOIM4232 stretches the received infrared pulse to the proper bit width depending on the operating bit rate. The IrDA bit rate varies from 2.4 kbit/s to 115.2 kbit/s. The TOIM4232 is using a crystal clock 3.6864 MHz for its pulse stretching and shortening. The clock can be generated by the internal oscillator. An external oscillator can be used too. The TOIM4232 is programmable to operate from 1200 bit/s to 115.2 kbit/s by the communication software through the RS232 port. The output pulses are software programmable as either 1,627 us or 3/16 of bit time. The typical power consumption is very low with about 10 mW in operational state and in the order of a few microwatts in standby mode.

For quantities of 2000 and up, call for quote.

IrDA TRANSCEIVER EVALUATION BOARD

The IrDA Transceiver Evaluation Board will allow engineers to easily prove a concept and aid in product development.
The Evaluation Board includes the TFDU4100 Transceiver and TOIM4232 Encoder/Decoder along with all supporting components.

The IRA41004232-KIT is a prepackaged kit which is made up of two IRA41004232 boards and a CD that contains a Self-Test program, Application Notes, data sheets and instructions.

DLP DESIGN USB Interface Products

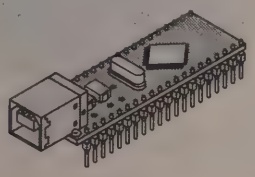
"Add USB to your next project--it's easier than you might think!"

DLP Design's USB Interface products provide a high-speed, hot-swappable, user-friendly connection between your electronic device and a host PC. The USB interface will provide up to 500mA at 5 volts of power for your electronics. These boards make the extremely complex USB Interface easy for just about anyone to start using, without requiring any in-depth prior knowledge.

DUAL CHANNEL USB ADAPTORS

626-DLP2232M

The DLP-2232M uses FTDI's FT2232C 3RD generation Dual Channel USB-FIFO/UART and offers a simple solution for interfacing ASIC/MCU/FPGA/DSP based designs to a host computer via USB. Each channel can be configured for either USB-UART or USB-FIFO via the on-board setup EEPROM. Rev 3 silicon from FTDI. No in-depth knowledge of USB required!

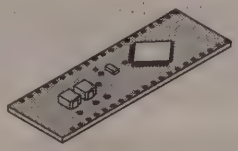


626-DLP2232M

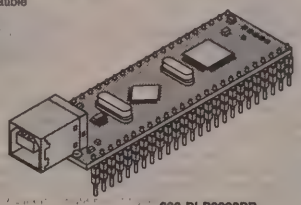
626-DLP2232ML

Same functional design as the DLP-2232M, the DLP-2232ML is perfect for space constrained designs.

- Dual channel, each can be configured for USB-FIFO or USB-UART
- Up to 8 megabit per second data rate
- USB 1.1/2.0 Compatible



626-DLP2232ML



626-DLP2232PB

626-DLP2232PB

The DLP-2232PB uses FTDI's 3RD generation FT2232C USB IC and a PIC Microchip 16F877A to form a rapid prototyping development tool. On-board firmware uploader included - no device programmer required!

- Simple USB-FIFO interface to PIC Microchip 16F877A microcontroller
- On-board device programmer for uploading firmware to the 16F877A - no device programmer required!
- Plugs into a standard 50 pin, 0.9in wide DIP socket
- Example source code provided for Token firmware feature
- Up to 2 megabit per second data rate to host computer.
- USB 1.1/2.0 Compatible

For quantities of 250 and up, call for quote.

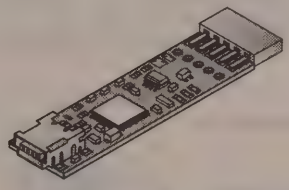
626-DLP-TXRX

This USB-to-serial adapter is designed to easily connect a microcontroller/DSP/FPGA/etc to a host PC or upgrade a legacy RS232 device to USB with minimal design effort. Virtual Com Port (VCP) drivers are provided royalty-free that make the DLP-TXRX look like a standard Windows/Linux/Mac RS232 port to the users host program. An attractive quantity discount structure makes this module suitable for incorporation into low- and medium-volume finished products.



Features:

- Connection to host PC/Mac made via mini USB connector
- As few as 2 wire serial interface (RX, TX and ground)
- Standard baud rates from 300 to 921,600 baud
- Support for non-standard baud rates (ApNote AN232-01)
- Open-collector output available for resetting microcontroller under software control (DTR)
- Input provided for user-selectable interface voltage
- Red and green LEDs to indicate transmit and receive activity

For quantities of 250 and up, call for quote.

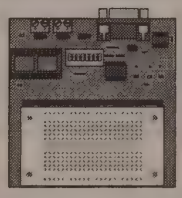
DLP-PROTO PROTOTYPING BOARD



Works with both the DLP-USB232M and DLP-USB245M modules. Great for prototyping new designs. Example source code provided for enabling Bit-bang mode in Visual C++ and Visual Basic. Makes easy work of prototyping and testing USB-to-RS232 designs. LED indicators for data lines and selected status lines.

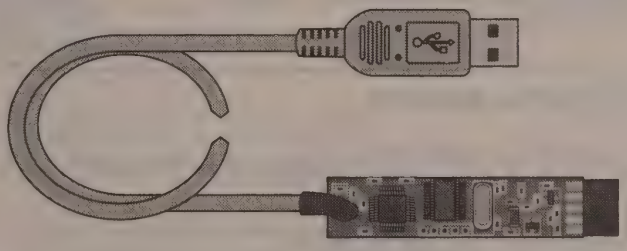
DLP-FLASH PROGRAMMER



The DLP-FLASH is an innovative USB based adapter for programming both Scenix (Ubicom) and Microchip PIC Flash based MPU's. Not only is it the ideal companion for the DLP USB/Microcontroller modules and training kits, but is a worthy addition to the toolkit of any hobbyist or professional who develops projects using either family of MPU's.

No additional cables or external power source required. All power is taken from the USB port via the provided USB cable. In-circuit programming -- no more loading the target microcontroller into a device programmer. Full application software provided.

Compatible With:	
PIC Microchip	Scenix/Ubicom
16F84A	SX28
16F870	SX48
16F871	
16F872

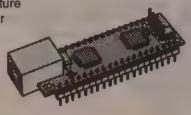
DLP Design's USB Interface products provide a high-speed, hot-swappable, user-friendly connection between your electronic device and a host PC. The USB interface will provide up to 500mA at 5 volts of power for your electronics. These boards make the extremely complex USB Interface easy for just about anyone to start using, without requiring any in-depth prior knowledge.

USB MICROCONTROLLER DEVELOPMENT BOARDS

DLP-245SY

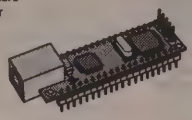
- Simple USB-FIFO interface to Ubicom SX48 microcontroller (50MHz)
- Plugs into a standard 40-pin, 0.6in wide DIP socket
- Example source code provided for Token firmware feature
- Up to 7 megabit per second data rate to host computer
- USB 1.1 compliant
- Rev 2 silicon from FTDI
- No in-depth knowledge of USB required



The DLP-245SY is a powerful integrated module based on the DLP-USB245M USB-FIFO adapter coupled with a Ubicom SX48 microcontroller and royalty free USB drivers. It plugs into a standard 40 pin 0.6in wide DIP socket and is ideal for rapid prototyping and development of USB / Ubicom based designs. Token I/O code pre-programmed into the SX48's ROM for basic port pin input/output capability including access to an external, on-board EEPROM, and external digital temperature sensors. The SX48's Flash ROM can be easily erased and reprogrammed if required using the optional DLP-Flash Programmer. Refer to the datasheet for full details.

DLP-245PB

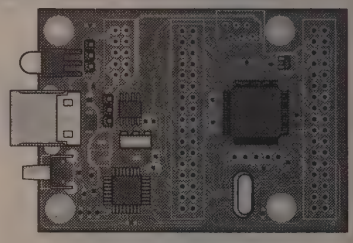
- Simple USB-FIFO interface to PIC Microchip 16F877 microcontroller
- Plugs into a standard 40-pin, 0.6in wide DIP socket
- Example source code provided for Token firmware feature
- Up to 2 megabit per second data rate to host computer
- USB 1.1/2.0 Compatible
- Rev 2 silicon from FTDI
- No in-depth knowledge of USB required



The DLP-245PB is a powerful integrated module based on the DLP-USB245M USB-FIFO adapter coupled with a PIC 16F877 MPU and royalty free USB drivers. It plugs into a standard 40 pin 0.6in wide DIP socket and is ideal for rapid prototyping and development of USB / PIC based designs. Token I/O code pre-programmed into the 16F877's ROM for basic port pin input/output capability including access to the A/D, EEPROM, and external digital temperature sensors. The 16F877's Flash ROM can be easily erased and reprogrammed if required using the optional DLP-Flash Programmer. Refer to the datasheet for full details.

DLP-245PL

- Simple USB-FIFO interface to PIC Microchip 18LF8720 microcontroller
- 50 I/O pins (including A/D inputs) plus 8-bit data bus
- Example source code provided for Token firmware feature
- Up to 2 megabit per second data rate to host computer
- USB 1.1/2.0 compatible
- Rev 2 silicon from FTDI
- No in-depth knowledge of USB required



The DLP-245PL is a powerful integrated module based on the DLP-USB245M USB-FIFO adapter coupled with a PIC 18LF8720 MPU and royalty free USB drivers. The 18LF8720 microcontroller is preprogrammed with basic functionality for accessing the port pins and can be reprogrammed with user hex code via a 5-pin header that is compatible with Microchip's MPLAB ICD2 device programmer/debugger (purchased separately). Refer to the datasheet for full details.

For quantities of 500 and up, call for quote.

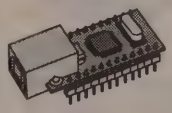
USB ADAPTER BOARDS

DLP-USB245M

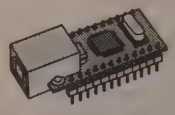
- Add USB connectivity to your next project
- Up to 8 megabit per second data rate
- USB 1.1 compliant
- Simple FIFO interface to MCU, FPGA, CPU, etc.
- Rev 2 silicon from FTDI
- No in-depth knowledge of USB required



The DLP-USB245M USB-FIFO adapter offers a simple straight-forward solution for interfacing ASIC or MCU based designs to USB. It comes complete with royalty-free drivers for most common operating systems. Features include an easy to use FIFO-like interface, a data transfer rate of up to 8 megabits per second and a standard .6 inch, 24 pin DIP footprint.

DLP-USB232M

- Easily convert legacy RS-232 devices to USB
- Up to 3 megabaud data rate
- USB 1.1 compliant
- Full handshaking & modem interface signals
- Rev 2 silicon from FTDI
- No in-depth knowledge of USB required



The DLP-USB232M USB-UART Adapter PCB is the ideal solution for upgrading legacy RS232 designs to USB. It comes complete with royalty-free drivers for most common operating systems. Features include data transfer rates of up to 3 million baud, a full set of modem handshaking controls and a standard .6 inch, 24 pin DIP footprint.

For quantities of 500 and up, call for quote.

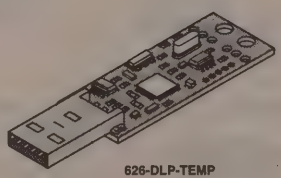
USB DATA ACQUISITION

Schematics available on-line. USB 1.1 Compliant.
The onbaord PIC12F629 microcontroller can be reprogrammed with user code (requires programmer).
Drivers and test applications can be downloaded from the website

Acquire data from the world around you using these USB based data acquisition boards.
Learn how to interface to FTDI's FT232BM USB-UART IC using
small microcontrollers and simple RS232-like commands.
Demonstration code now available upon purchase for Visual C++ and Visual Basic.
Microcontroller C source code also available upon purchase

626-DLP-TEMP

- DLP-TEMP 2-Channel Temperature Acquisition Board
- Monitor and log digital temperature data from 1 or 2 sensors (one DS18B20 sensor included with purchase of board)



626-DLP-TEMP

626-DLP-TEMP9

- DLP-TEMP9 9-Channel Temperature & Digital I/O Board
- Monitor and log digital inputs and temperature data from 1 to 9 sensors (one DS18B20 sensor included with purchase of board, logging requires WinAp9 software).

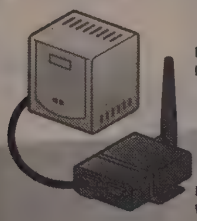
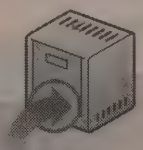
LANTRONIX Device Servers

LANTRONIX®

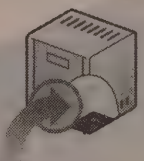
LANTRONIX® Device Server Technology



New and Existing Equipment



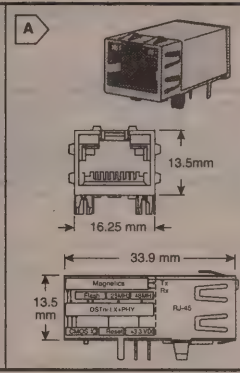
New Product Development



External Device Servers
Web-enable your products.
Speed time-to-market.
Connect existing equipment to Ethernet and the Web.

Board-Level Device Servers
Easy to add/remove.
Easily adaptable to existing design.

Embedded Modules
Intergated – built into your design.



EMBEDDED DEVICE SERVERS

Lantronix embedded device servers are a cost-effective and reliable way to seamlessly embed network connectively into your products. Our expertise in device networking, a stable real-time operating system (RTOS) and TCP/IP stack enables you to add full Ethernet and/or wireless connectivity your products with minimal effort, programming and development time. Lantronix's compact, cost-effective embedded device networking products deliver a complete feature set, including encryption, serial support options, management flexibility, 10/100 Base-T Ethernet or wireless connectivity, and the ability to customize.

EXTERNAL DEVICE SERVERS

Increasingly, organizations must leverage their networking infrastructure investment across all of their resources. However, much of this equipment lacks network ports or requires dedicated serial connections for management. Lantronix Device Servers enable virtually any piece of electronic equipment with serial communications capability to become a fully function part of the Ethernet network, enabling organizations to save money, increase efficiency and breath new life into legacy equipment.

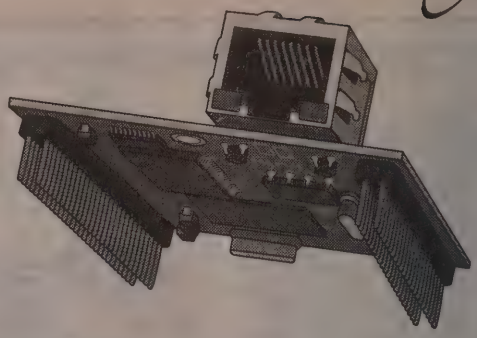
NETBURNER Embedded 32-bit Ethernet Processors

NetBurner Networking in 1 Day!

32-BIT 10/100 ETHERNET CORE PROCESSOR MODULES



The NetBurner core processor modules are devices containing everything needed for design engineers to add network control and to monitor a company's communications assets. For a very low price point, the modules solve the problem of network-enabling devices with 10/100 Ethernet, including those requiring digital, analog, and serial control.

Traditionally, companies using 8 and 16-bit platforms find it nearly impossible to run resource-intensive applications on fast Ethernet connections. The NetBurner modules feature a Web-based control interface, a full 32-bit architecture providing 60+ MIPS, and the full suite of TCP/IP protocols. The 32-bit high performance processing platform provides the horsepower to handle both, 10/100 Ethernet connections, and resource demanding applications, with ease and flexibility.

Custom Applications: Quickly and easily customize your specific application requirements using the NetBurner Network Development Kits.

Development Kit Contents:
- 32-bit Core Processor Module
- Development Board
- CD-ROM
- Network Cables
- Serial Cable
- 12 Volt Power Supply for US/Canada

Feature:	MOD5270 Module	MOD5272 Module	MOD5282 Module
Processor:	32-bit Freescale ColdFire 5270 Module	32-bit Freescale ColdFire 5272 w/ intergrated 10/100 Ethernet MAC	32-bit Freescale ColdFire 5282 w/ intergrated 10/100 Ethernet MAC
Speed:	96MPS @ 100MHz	63MPS @ 66MHz	76MPS @ 80MHz
Network Interface:	10/100BaseT with RJ-45 Jack	10/100BaseT with RJ-45 Jack	10/100BaseT with RJ-45 Jack
Flash Memory:	512KB	2MB	512KB
SDRAM:	2MB	8MB	8MB
Power Requirements:	500mA @ 3.3V	500mA @ 3.3V	500mA @ 3.3V
PCB Connection:	2 sets of .100" 50-pin dual row headers	2 sets of .100" 50-pin dual row headers	2 sets of .100" 50-pin dual row headers
LEDs:	10/100 Ethernet Speed and Link/Activity	10/100 Ethernet Speed and Link/Activity	10/100 Ethernet Speed and Link/Activity

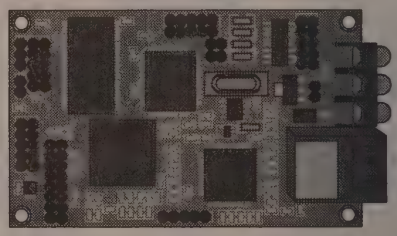
32-BIT SERIAL-TO-ETHERNET PROCESSOR BOARDS

If your application requires TTL level serial ports, just plug in the SB70 and go! If you require RS-232, RS-422 or RS-485, please see the SB72 Ethernet to Serial Processor Board.



SB70 Processor Board

The NetBurner SB70 is designed for applications that require a high performance/low cost 10/100 Ethernet interface to serial devices. The SB70 come preloaded with software to translate serial and Ethernet data, and is configurable through any web browser. The SB70 application code can be customized to any specific application requirements with the NetBurner Network Development Kit.

SB72 Processor Board

The NetBurner SB72 is designed for applications that require a high performance/low cost 10/100 Ethernet interface to serial devices. The SB72 come preloaded with software to translate serial and Ethernet data, and is configurable through any web browser. The SB72 application code can be customized to any specific application requirements with the NetBurner Network Development Kit. The SB72 is similar to the SB70, with the addition of RS-232 and RS-485 level shifters.

SB70 Features:
- Instantly allows any serial device to communicate over a network or the Internet
- The SB70 can be used a single board computer for custom applications.
- Includes TCP/IP, Telnet, SNMP, and Web Server (HTTP)
- Supports TTL, and QSPI* serial devices
- Web page configuration
- Powerful 32-bit Motorola ColdFire processor with integrated 10/100 Ethernet MAC
- Development kit required for QSPI.

SB72 Features:
- Instantly allows any serial device to communicate over a network or the Internet
- The SB70 can be used a single board computer for custom applications.
- Includes TCP/IP, Telnet, SNMP, and Web Server (HTTP)
- Supports RS-232, RS-485/422, TTL, and QSPI* serial devices
- Web page configuration
- Powerful 32-bit Motorola ColdFire processor with integrated 10/100 Ethernet MAC
- Development kit required for QSPI.

Feature:	SB70 Processor Board	SB72 Processor Board
Processor:	32-bit Freescale ColdFire 5270 w/ intergrated 10/100 Ethernet MAC	32-bit Freescale ColdFire 5272 w/ intergrated 10/100 Ethernet MAC
Speed:	145MPS @ 150MHz	63MPS @ 66MHz
Network Interface:	10/100BaseT with RJ-45 Jack	10/100BaseT with RJ-45 Jack
Serial Ports Supported:	-	RS-232, RS-422, RS-485, TTL.
Flash Memory:	512KB	512KB
SDRAM:	2MB	8MB
Power Requirements:	480mA @ 5V	480mA @ 5V
LEDs:	Link, Speed/Data, Power	Link, Speed/Data, Power
Network Protocols:	ARP, DHCP, BOOTP, TCP, UDP, ICMP, Telnet, HTTP, SNMP	ARP, DHCP, BOOTP, TCP, UDP, ICMP, Telnet, HTTP, SNMP
Dimensions:	3.25" X 2"	3.25" X 2"

Development Kit Contents:
- SBXX Processor Board
- Adapter board to assist in development. It is not required to operate. The adapter board includes a switching power supply, RS-232 level shifters and two DB-9 connectors.
- CD-ROM containing source code, development tools, manuals and documentation.
- Cross-wired and straight-through twisted pair network cables
- Serial cable
- 12 VDC power supply (US and Canada only)

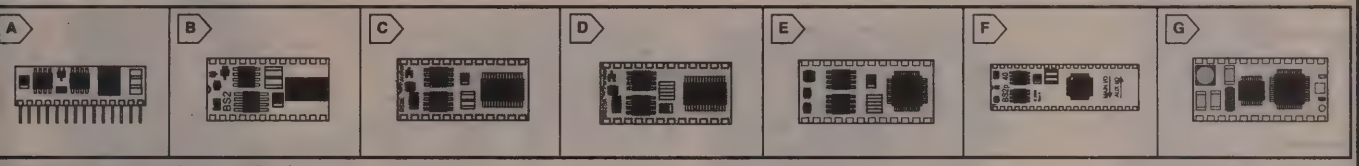
PARALLAX BASIC Stamp Modules and Accessories

PARALLAX

ASIC Stamps are small computers with 8 or 16 I/O lines that can be connected to TTL level devices and also, with a few extra components, solenoids, relays, and RS232 networks. Their simple language and easy interfacing make ASIC Stamps ideal for many applications for industrial, educational, and hobbyist customers. BASIC Stamps require only editor software, a prototype area, and cable to get started. Each BASIC Stamp has on board it's own non-volatile EPROM, voltage regulator, resonator, and microcontroller.



BASIC STAMP MODULES

Operating Temperature at 70% Non-Condensing Humidity: 0°C to +70°C

† Plus 2 Dedicated Serial I/O Pins

For quantities of 100 and up, call for quote.

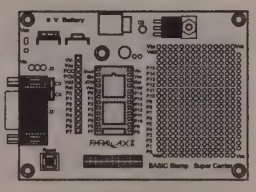
ASIC STAMP SUPER CARRIER BOARD

e Super Carrier provides wire-wrap prototyping space and holes aced to accommodate DIP ICs. The Super Carrier supports the S1-IC, BS2-IC, BS2E-IC, BS2SX-IC, and BS2P 24 pin modules.

atures:

- 3" x 4" Double-sided plated through-hole prototype board
- Sockets support BS1-IC and all 24 pin BS2 modules
- On-board voltage regulator accepts 6-30 VDC, from wall-pack or battery
- Serial programming port (D89) can be used for run-time communication (BS2-IC and BS2SX-IC)
- Prototype area (1.5" x 2.0") holes arranged to easily support: servos, 300 and 600 mil DIP ICs, D89, DB25, RJ-11 connectors
- AppMod header
- Size measures 7.7 x 10.2cm (3" x 4")



For quantities of 10 and up, call for quote.

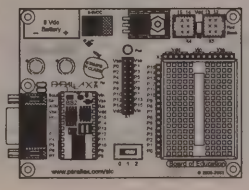
619-27130	27130	Carrier Board for Stamp Modules	19.95

BOARD OF EDUCATION - SERIAL VERSION

The Board of Education was designed in coordination with educational customers to each microcontroller interfacing and programming. It is a quick platform for building a circuit without requiring soldering or wire wrapping tools.

Features:

- Mechanically interlocked power supply to prevent dual connection of wall pack and 9V battery.
- DB9 connector for BS2-IC programming and serial communication during run time.
- Female 10 pin dual row connector for optional AppModules (more breadboard space)



For quantities of 10 and up, call for quote.

PARALLAX Accessories and FPGA Development Tools

BASIC STAMP EMBEDDEDBLUE TRANSCEIVER APPMOD

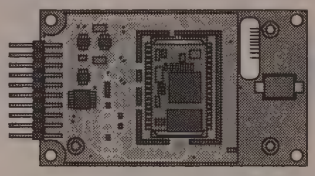
The EmbeddedBlue Transceiver AppMod provides standard Bluetooth connectivity for BASIC Stamp applications without the need for detailed Bluetooth knowledge.

Specifications:

- Frequency: 2.4GHz FHSS
- Transmit Power: 4dBm (max) class 2 operation
- Open Field Range: 300 feet
- Bluetooth: Compliant with the v1.1 standard
- Receiver sensitivity at 0.1% BER: -85dBm

Features:

- Integrates with BASIC Stamp 2 Series
- Seamless connection with Bluetooth devices
- Perfect for wireless cable replacement

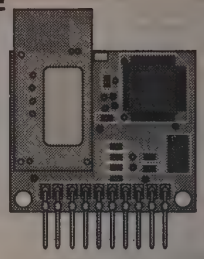


For quantities of 10 and up, call for quote.

MOUSER STOCK NO.	Parallax Part No.	Description	Price Each
619-30068	30068	Bluetooth Transceiver for Basic Stamp	99.00
619-30069	30069	PC (RS232) Adapter for 619-30068	99.00

FLEXIPANEL BLUETOOTH MODULE

The FlexiPanel Module allows for "Pocket PC" connectivity to the BASIC Stamp. Specifically, it's designed for the BS2p (BS2p24, BS2p40) to create an operator interface via a Bluetooth link. This device ultimately creates a control interface for a myriad of applications. You may customize the FlexiPanel software for your specific application, whether it's a weather station or data logging project.



For quantities of 10 and up, call for quote.

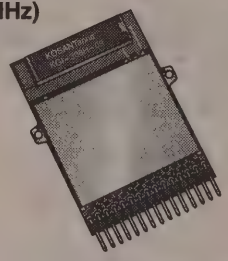
619-30070	30070	Remote Control for Handheld Devices	99.00

BASIC STAMP RF MODULE (900MHz)

The SureLink module is an RF wireless transceiver operating at 900 MHz. This module is designed to comply with FCC Part 15 Rules and Regulations. If bi-directional communication is needed, then two SureLink Modules and two QuickLink Demo Boards are needed to achieve this type of link.

Features:

- Data DTE transfer rates of 1200 Baud to 115k Baud
- RF Transfer rates from 48000 bps to 76.8 kbps
- Range up to 1000 feet



For quantities of 10 and up, call for quote.

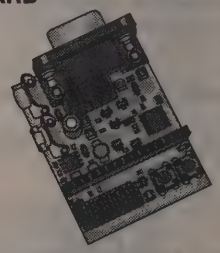
MOUSER STOCK NO.	Parallax Part No.	Description	Price Each
619-30065	30065	RF Transceiver 900MHz	99.95

BASIC STAMP QUICKLINK DEMO BOARD

The QuickLink Demo Board is designed to work specifically with the SureLink 900 MHz RF Module(#30065). This Demo Board and the SureLink Module are designed to comply with FCC Part 15 Rules and Regulations. The documentation, for this board, outlines 3 modes of operation (Demo Mode, Cable Link Mode, and Stand Alone Mode) which allows you to set the appropriate configuration for your application.

Features:

- Long battery life of up to 5 hours of operation
- 16 run-time selectable channels
- Built-in error correction for all data transmissions



For quantities of 10 and up, call for quote.

MOUSER STOCK NO.	Parallax Part No.	Description	Price Each
619-30066	30066	Control board for 30065	89.95

SX KEY DEVELOPMENT SYSTEM

The SX Key is a full-featured programmer and debugger for SX microcontrollers. The SX-Key was designed in tandem with the SX chip and fully utilizes the SX's debug and in-system programming features. The E2 flash memory of the SX allows repeated in-place programming of the microcontroller.

For quantities of 10 and up, call for quote.

MOUSER STOCK NO.	Parallax Part No.	Description	Price Each
619-SX-SXTECH	45180	SX Programmer / Debugger	114.84

UBICOM SX 8-BIT MICROCONTROLLERS

Features:

- 50 MIPS performance @ 50MHz
- Single cycle instruction execution
- Internal RC oscillator
- Analog comparator
- EE/Flash program memory rated for 10,000 write cycles
- In-system programming via OSC pins
- Multi-Input Wake-Up (MIWU) on 8 pins

For quantities of 1000 and up, call for quote.

MOUSER STOCK NO.	Parallax Part No.	Package	Price Each

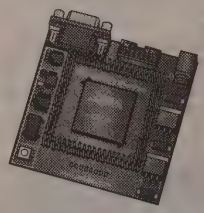
PARALLAX STRATIX SMARTPACK - EP1S10

The Stratix SmartPack is a specialized device for advanced engineers interested in building custom ASICs or even their own microcontroller cores. The Stratix is a large scale FPGA (field programmable gate array).

This SmartPack is based on the EP1S10-6. Comes with Altera's Quartus II Web Edition software which supports the EP1S10.



For quantities of 10 and up, call for quote.

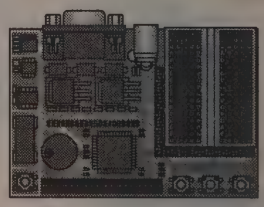
MOUSER STOCK NO.	Parallax Part No.	Description	Price Each
619-60002	60002	Stratix SmartPack EP1S10	395.00

PARALLAX CYCLONE FASTPACK

The Cyclone FastPack is based on the EP1C3T100C7 device.

Includes:

- 5VDC Power Supply
- Parallax Loader Software
- Quartus II Web Edition Design software
- Serial Cable



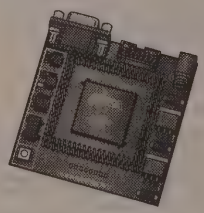
For quantities of 10 and up, call for quote.

MOUSER STOCK NO.	Parallax Part No.	Description	Price Each
619-60004	60004	Altera Development Board	195.00

PARALLAX STRATIX SMARTPACK - EP1S25

The Stratix SmartPack is a specialized device for advanced engineers interested in building custom ASICs or even their own microcontroller cores. The Stratix is a large scale FPGA (field programmable gate array). This SmartPack is based on the EP1S10-6.

The EP1S25 device requires Quartus II Full Edition from Altera (must be purchased separately).



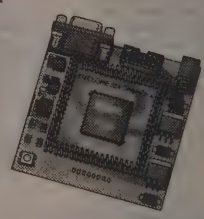
For quantities of 10 and up, call for quote.

MOUSER STOCK NO.	Parallax Part No.	Description	Price Each
619-60001	60001	Stratix SmartPack EP1S25	495.00

The Stratix SmartPack is not related to the BASIC Stamp product line.

PARALLAX CYCLONE SMARTPACK

The extremely cost-effective Parallax Cyclone development tools have been designed to give engineers the opportunity to explore the features of the new Altera Cyclone device family. The Cyclone SmartPack provides you with everything necessary to begin development with the Cyclone FPGA. The SmartPack neatly presents the Cyclone device with all required support circuitry, plus a simple serial port loader.



For quantities of 10 and up, call for quote.

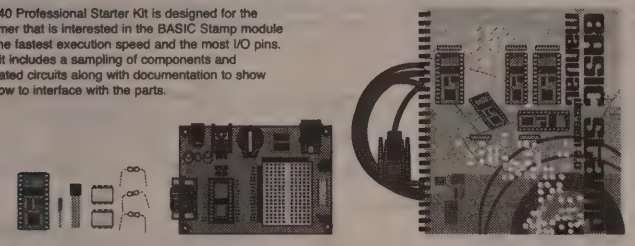
MOUSER STOCK NO.	Parallax Part No.	Description	Price Each
619-60003	60003	Altera Development Board	295.00

PARALLAX Development Tools

PARALLAX

PARALLAX BASIC STAMP 2P40 STARTER KIT

BS2p40 Professional Starter Kit is designed for the customer that is interested in the BASIC Stamp module with the fastest execution speed and the most I/O pins. The kit includes a sampling of components and integrated circuits along with documentation to show you how to interface with the parts.

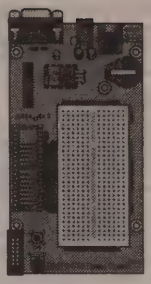


For quantities of 10 and up, call for quote.

MOUSER STOCK NO.	Parallax Part No.	Description	Price Each
619-27238	27238	Project Board, parts, manual, Serial Cable	219.00

PARALLAX BS2P24/40 DEMO BOARD

The new BS2p24/40 Demo Board is a valuable learning tool and time-saving prototyping aide for the Parallax BS2p24 module and BS2p40 module (not included with Demo Board). The Demo Board provides very useful connections to 1-Wire, I2C components, parallel LCDs as well as a breadboard prototype space. This board is currently included in the BS2p40 Professional Starter Kit (#27238) and will eventually be added to the BS2p24 Professional Starter Kit (#27235). The 7.5V 1 amp power supply is recommended (#750-00009-not included).



For quantities of 10 and up, call for quote.

619-45187	45187	Project Board for BS2p24 and BS2p40 modules	89.00

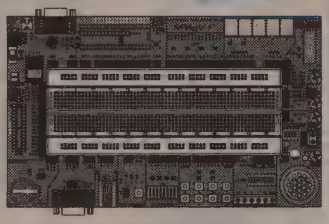
PARALLAX PROFESSIONAL DEVELOPMENT BOARD

The Parallax Professional Development Board (PDB) is high-quality, fully-integrated development platform for BASIC Stamp®, Javelin Stamp, and Ubicom® SX28AC/DP microcontrollers.

NEW FROM SUPPLIER

Features:

- 40-pin DIP socket (for all BASIC Stamp 24/40-pin and Javelin Stamp modules)
- 14-pin SIP socket (for BS1-IC)
- 28-pin "skinny" DIP socket (for SX28AC/DP)
- USB, DB-9, BS1, and SX-Key programming connectors
- 5 volt, 1.0 amp power-supply with power switch
- Five blue 7-segment (with decimal point), common-cathode LED displays
- Parallel LCD (available separately) may be configured in 4-bit or 8-bit mode
- Two servo-compatible headers
- Two 10k Ohm potentiometers
- L293D high-current driver for motors, solenoids, etc.
- Eight, normally-open pushbuttons (I/O lines protected, and pulled-up to Vdd via 10K)
- Pulse generator with selectable frequency (1 Hz, 10 Hz, 100 Hz, or 1 kHz)
- RS-232 DCE port with MAX232E transceiver



For quantities of 10 and up, call for quote.

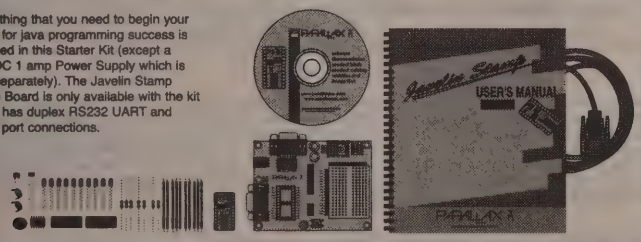
PARALLAX JAVELIN STAMP STARTER KIT

Everything that you need to begin your quest for java programming success is included in this Starter Kit (except a 7.5VDC 1 amp Power Supply which is sold separately). The Javelin Stamp Demo Board is only available with the kit and it has duplex RS232 UART and servo port connections.

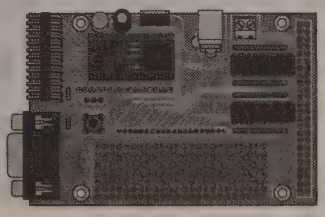


For quantities of 10 and up, call for quote.

MOUSER STOCK NO.	Parallax Part No.	Description	Price Each
619-27237	27237	Project Board, parts, manual, Serial Cable	239.00

PARALLAX STAMP CONTROLLER INTERFACE BOARD

The Stamp Controller Interface allows the BASIC Stamp® microcontroller to connect directly to industrial type digital I/O control boards produced by Opto22, Grayhill, Allen-Bradley, and others that accept 0-5 VDC voltage control levels. These optically isolated modules are ideal for interfacing microcontrollers to the real world, and are more reliable by providing proper isolation. The Stamp Controller Interface accepts all BASIC Stamp modules. A 9-12 VDC, 2.1 mm jack is included for external power supply (sold separately).



For quantities of 10 and up, call for quote.

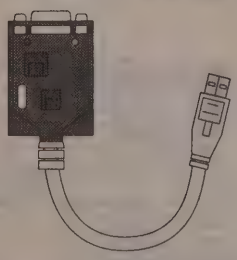
619-27945	27945	Project Board accepts all BASIC Stamps	69.00

FTDI USB TO SERIAL ADAPTER

Parallax has tested most USB-RS232 adapters on the market with our products and this one is the best! We chose it because it uses the FTDI chip and their assortment of drivers for different operating systems is superior. FDTI has demonstrated that they can provide fully functional drivers, maintaining and improving them as operating systems change (such as Windows). The adapter works with all of our products. If you don't have a serial port on your machine, this is an easy solution.



For quantities of 10 and up, call for quote.

RABBIT Microprocessors, Core Modules, and Dev. Kits

RABBIT 2000™ MICROPROCESSOR (30 MHZ)

The Rabbit 2000™ is a high-performance 8-bit microprocessor designed expressly to power a new generation of embedded systems. Its extensive integrated feature set and glueless architecture facilitate rapid hardware design, and its C-friendly instruction set permits efficient development of complex applications. For embedded systems, the Rabbit 2000 out-performs most 16 and some 32-bit processors without losing the efficiency of an 8-bit architecture. With clock speeds of up to 30 MHz and numerous on-chip peripherals including memory and I/O control signals for glueless interface, four serial ports, over forty digital I/O pins, 8 and 10-bit timer systems, watchdog timer, real-time clock and flexible clocking options, the Rabbit 2000 packs a hardware punch that system designers will appreciate. Our Dynamic C® development environment provides an integrated C compiler with debugger and linker for efficient and powerful applications development.

Design Advantages:

- 8-Bit Architecture
  High-performance architecture with integrated peripherals permit efficient and cost effective hardware design.
- Enhanced Instruction Set
  Brings new power and speed to 8-bit systems with numerous one-byte opcodes and 16-bit logical, arithmetic, and data transfer instructions.
- Exceptional Math Performance
  Based on highly optimized math libraries.
- Dynamic C® Development Environment
  For real-time development and debugging of Rabbit-based systems using C or Assembly language.
- TCP/IP Connectivity
  Full TCP/IP stack with source code is provided royalty free in Dynamic C.

Feature List:

- On-board slave port allows the Rabbit to be configured as an intelligent peripheral device.
- Control of clock speed by software allows dynamic trading of power vs. speed.
- Excellent math performance with 16 x 16 multiply in 12 clocks.
- Three levels of interrupt priority allow fast response to real-time events.
- 40 parallel I/O lines.
- 4 serial ports
- Five 8-bit timers and one 10-bit timer with two match registers
- Battery-backable time/date clock
- Watchdog Timers

∗ Software available à la carte. See www.mouser.com/rabbitsemi/ **For quantities of 500 and up, call for quote.**

RCM2000 RABBIT 2000™ DEVELOPMENT KIT

The RCM2000/Rabbit 2000 Development Kit includes a core module (model RCM2020 with Rabbit 2000® microprocessor, flash, SRAM, serial ports, digital I/O), Dynamic C® SE development software and documentation on CD-ROM (not a trial version!), prototyping board, power supply and serial programming cable. The RabbitCore 2000 is the foundation around which you can build a custom board based on the Rabbit 2000 microprocessor. It includes all the components that will jump-start your board design; general-purpose I/O, memory I/O interface, battery backup interface, master-slave control pins, five 8-bit timers (cascadable in pairs) and one 10-bit timer with two match registers, four CMOS-compatible serial ports, and up to 25.8MHz (see versions) clock for fast number crunching. Flash and SRAM are on-board, providing a development-ready memory interface.

Development Software:

The RCM2000/Rabbit 2000 Development Kit is ready for immediate software development. User programs are created using Dynamic C® SE a C language environment that includes an editor, compiler and debugger. Dynamic C SE is an enhanced version of the industry standard C programming language that is specifically tailored for control and embedded systems. Dynamic C SE includes Fast Fourier Transform functions, supports up to one megabyte of code and data and includes software drivers specific for the development kit. Programs can be compiled and executed using the Dynamic C software and a serial programming cable. No in-circuit emulator is required.

RCM2200 RABBIT 2000™ DEVELOPMENT KIT

Jump start your design efforts with our most compact Ethernet core module. The RCM2200/Rabbit 2000 Development Kit includes a RCM2200 RabbitCore (with a Rabbit 2000® microprocessor with 22.1 MHz clock, 256K flash memory, 128K SRAM, Ethernet and serial ports, and digital I/O), prototyping board, power supply (U.S. sales only), Dynamic C® SE development software with TCP/IP stack and documentation on CD-ROM (not a trial version!), a PC serial cable, and a Getting Started manual. The RabbitCore RCM2200 is the foundation around which you can build a custom board based on the Rabbit 2000 microprocessor. It includes all the components that you need for fast and easy board design-26 parallel I/O lines, a memory-I/O interface, a battery-backup interface, master/slave control pins, five 8-bit timers (cascadable in pairs) and one 10-bit timer with two match registers, and four CMOS-compatible serial ports. Flash and SRAM are on-board and provide a development-ready memory interface. Full TCP/IP source code is provided in addition to the Dynamic C software on CDROM. ICMP, HTTP (includes facilities for SSI, CGI routines, cookies, and basic authentication), SMTP, FTP and TFTP (client and server) capabilities are provided. Ethernet drivers for the RealTek Ethernet chip are also included. Users can directly write to TCP or UDP sockets to develop custom applications. In addition, extensive demo programs are provided to assist with development. No run-time royalties are required, saving OEMs significant cost over the life of their application.

Key Benefits:

- Ethernet ready-port to an Ethernet chip is done for the Rabbit 2000 chip.
- Cost-effective-no run-time royalties.
- Simplified development-a complete Dynamic C® SE software package (with integrated editor, compiler and debugger) is provided. No in-circuit emulator required!
- A head start-sample demo programs, including HTTP web server and SMTP mail client, provide an advanced starting point for development.
- Quick development time-full hardware reference schematics help reduce development efforts.

TCP/IP Capability:

- Socket Level TCP-Transmission Control Protocol. Provides reliable full-duplex data transmission.
- Socket Level UDP-User Datagram Protocol. Simple protocol that exchanges datagrams without acknowledgements or guaranteed delivery.
- ICMP-Internet Control Message Protocol. Network layer Internet protocol reports errors and provides information relevant to IP packet processing.
- HTTP-Hypertext Transfer Protocol. The protocol used by Web browsers and Web servers to transfer files, such as text and graphic files. Includes facilities for Server Side Includes (SSI) and CGI routines.
- SMTP-Simple Mail Transfer Protocol. Internet protocol providing e-mail services.
- FTP-File Transfer Protocol. Application protocol, part of the TCP/IP protocol stack, used for transferring files between network nodes. Server with password support for file transfers between network nodes available on Rabbit 2000.
- TFTP-Trivial File Transfer Protocol. Simplified version of FTP that allows files to be transferred from one computer to another over a network. Client and server available on Rabbit 2000.

RABBIT Core Modules and Development Kits

RCM2300 RABBIT 2000 DEVELOPMENT KIT

Our most compact and cost-effective RabbitCore opens up a world of new design options. The Rabbit RCM2300/Rabbit 2000 Development Kit includes an RCM2300 RabbitCore (with Rabbit 2000® microprocessor with 22.1 MHz clock, 128K SRAM, 256K Flash, four serial ports, and 29 general purpose I/O), prototyping board, power supply (U.S. sales only), Dynamic C® SE development software with documentation on CD-ROM (not a trial version!), a PC serial cable, and a Getting Started manual. Measuring a mere 1.15 x 1.60 inches, the RCM2300 is designed to facilitate rapid development and simplified integration. Building a custom board based on the RCM2300 is easy. It includes all the components that you need for fast and easy board design-lots of I/O, a memory-I/O interface, backup battery circuitry, master/slave control pins, five 8-bit timers (cascadable in pairs) and one 10-bit timer with two match registers, and four CMOS-compatible serial ports. Flash and SRAM are on-board and provide a development-ready memory interface.

Development Software:

The RCM2300/Rabbit 2000 Development Kit is ready for immediate software development. User programs are created using Dynamic C® SE, a C-language environment that includes an editor, a compiler and a debugger. Dynamic C SE is an enhanced version of the industry-standard C-programming language that is specifically tailored for control and embedded systems. RCM2000 RABBITCORE MICROPROCESSOR MODULES (25.8MHZ)

Measuring just 2.30" x 1.90" (58 x 48 mm), the RCM2000 RabbitCore is a compact and powerful microprocessor core module that has all the components needed to jumpstart your board design. The RCM2000 comes in three available models and includes 40 general-purpose I/O, 4 CMOS-compatible serial ports, five 8-bit timers and one 10-bit timer with two match registers, and a fast number-crunching clock. Flash and SRAM are onboard, providing a development-ready memory interface.

Designing with RabbitCores:

The RabbitCore family of microprocessor core modules is designed to facilitate rapid development and implementation of embedded systems. RabbitCores are powered by high-performance 8-bit Rabbit microprocessors with extensive integrated features and a C-friendly instruction set designed for use with the Dynamic C® development system. The RabbitCore mounts on a user-designed motherboard and acts as the controlling microprocessor for the user's system. Small in size but packed with powerful features, these core modules give designers a complete package for control and communication.

Feature:	RCM2000	RCM2010	RCM2020
Microprocessor	Rabbit 2000 at 25.8 MHz		Rabbit 2000 a 18.432 MHz
Flash	256K		
SRAM	512K	128K	
Backup Battery	Connection for user-supplied battery (to support RTC and SRAM)		
General Purpose I/O	40 parallel I/O include: •26 configurable I/O • 8 fixed inputs • 6 fixed outputs (grouped in five 8-bit ports and shared with serial ports)		
Additional Inputs	2 Startup Mode, Reset In		
Additional Outputs	Watchdog, Reset Out		
Memory I/O	13 address, 8 data, I/O Read-Write, Buffer Enable, Status, Clock

RABBIT Microprocessor Core Modules

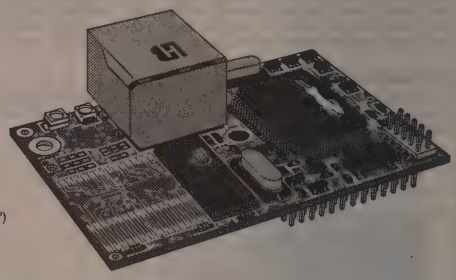
RCM2200 RABBITCORE MICROPROCESSOR MODULES (22.1MHZ)

Our award-winning Ethernet-enabled RCM2200 RabbitCore microprocessor core module is a compact yet powerful embedded control solution for application developers working with a small design footprint. Only half the size of a credit card, the RCM2200 features the powerful Rabbit 2000® microprocessor, 256K of Flash memory, 128K of SRAM, 4 serial ports, 26 I/O, real-time clock, and integrated Ethernet. (To permit parallel development and cost-effective implementation of both Ethernet-enabled and non-Ethernet systems, our pin-compatible RCM2300 model is also available.)

Designing with RabbitCores:

The RabbitCore family of microprocessor core modules is designed to facilitate rapid development and implementation of embedded systems. RabbitCores are powered by high-performance 8-bit Rabbit microprocessors with extensive integrated features and a C-friendly instruction set designed for use with the Dynamic C® development system. The RabbitCore mounts on a user-designed motherboard and acts as the controlling microprocessor for the user's system. Small in size but packed with powerful features, these core modules give designers a complete package for control and communication. The integrated Ethernet port frees designers from the limitations of serial-port communications and control and also permits instant local or worldwide connectivity using low-cost networking hardware. Embedded systemsusing the Ethernet RabbitCore module can be controlled and monitored (as well as programmed and debugged when using appropriate accessory hardware) across any network or the Internet.

Feature:	RCM2200	RCM2210	RCM2250
Microprocessor	Rabbit 2000™ at 22.1 MHz		
Ethernet Port	10Base-T, RJ-45, 2 LEDs	10Base-T (raw signals only)	10Base-T, RJ-45, 2 LEDs
Flash	256K		512K
SRAM	128K		512K
Backup Battery	Connection for user-supplied battery (to support RTC and SRAM)		
General Purpose I/O	26 parallel I/O include: • 16 configurable I/O • 7 fixed inputs • 3 fixed outputs		
Additional Inputs	2 Startup Mode, Reset		
Additional Outputs	Status, Reset		
Memory I/O	4 address, 8 data, plus I/O Read-Write		
Serial Ports	Four 5 V CMOS-compatible, 2 configurable as clocked ports (1 clocked line available only on programming header)		
Serial Rate	Max. burst rate = CLK/32 Max. sustained rate = burst/2		
Connectors	Two 2 x 13, 2 mm IDC headers		
Slave Interface	Slave port permits use as master or as intelligent peripheral with other master controller		
Timers	Five 8-bit timers (four cascadable from the first) and one 10-bit timer with 2 match registers		
Board Size	2.3" x 1.6" x 0.86" (59 x 41 x 22 mm)		



Features:

- Compact size (2.3" x 1.6" x 0.86")
- 10Base-T Ethernet
- Up to 512K Flash
- Up to 512K SRAM
- 26 general-purpose I/O
- With Real-Time Clock: RCM(2200,2210,2250)
- With Watchdog/Supervisor: RCM(2200,2210,2250)
- Power: 4.75-5.25 V DC, 134 mA
- Operating Temp.: -40° to +70°C
- Humidity: 5-95%, non-condensing

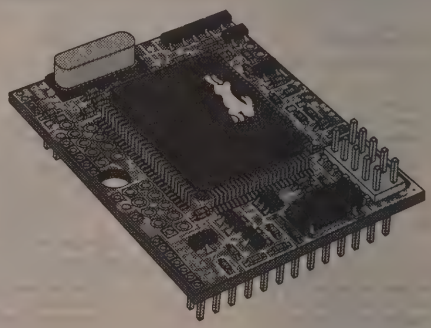
RCM2300 RABBITCORE ICROPROCESSOR MODULE (22.1 MHZ)

The ultra-compact RCM2300 RabbitCore microprocessor core module measures a mere 1.60 x 1.15 inches (41 x 29 mm), simplifying integration and opening up a world of new design options for economical control products. The RCM2300 includes 22.1 MHz clock, 256K of Flash, 128K of SRAM, real-time clock, 29 general-purpose I/O, and 4 serial ports. The RCM2300 is also pin compatible with the RCM2200 Ethernet core module for future Ethernet implementation of user designs.

Designing with RabbitCores: See details at the top of the page.

* 1 clocked line available only on programming header.

Feature:	RCM2300
Microprocessor	Rabbit 2000™ at 22.1 MHz
Flash	256K
SRAM	128K
Backup Battery	Connection for user-supplied battery (to support RTC and SRAM)
General Purpose I/O	29 I/O include • 17 configurable I/O • 8 fixed inputs • 4 fixed outputs (9 additional available via separate connections)
Additional Inputs	2 Startup Mode, Reset
Additional Outputs	Status, Reset
Memory I/O	4 address, 8 data, plus I/O Read-Write (extra address and Buffer Enable via separate connections)
Serial Ports	Four 5 V CMOS-compatible, 2 configurable as clocked ports (1 clocked line available only on programming header)
Serial Rate	Max. burst rate = CLK/32 Max. sustained rate = burst/2
Connectors	Two 2 x 13, 2 mm IDC headers
Slave Interface	Slave port permits use as master or as intelligent peripheral with other master controller
Timers	Five 8-bit timers (four cascadable from the first) and one 10-bit timer with 2 match registers
Board Size	1.60" x 1.15" x 0.47", (41 x 29 x 12 mm)



Features:

- Most compact and low-cost RabbitCore
- 1.60" x 1.15" x 0.47"
- 128K SRAM
- 256K Flash
- 29 general-purpose I/O
- With Real-Time Clock
- With Watchdog/Supervisor
- Power: 4.75-5.25 V DC, 108 mA
- Operating Temp.: -40° to +85°C
- Humidity: 5-95%, non-condensing

RABBIT Microprocessors, Core Modules, and Dev. Kits

RABBIT 3000™ MICROPROCESSOR (55.5 MHZ)

The new Rabbit 3000® is an extremely low-EMI microprocessor designed specifically for embedded control, communications, and Ethernet connectivity. The Rabbit 3000 shares its instruction set and conceptual design with the proven Rabbit 2000.® The Rabbit 3000 is fast-running at up to 54 MHz and C-friendly, with compact code and direct software support for 1 MB of code/data space. Rabbit 3000 development tools include extensive support for Internet and network connectivity, with full source code for TCP/IP provided royalty free The Rabbit 3000 operates at 3.3 V (with 5 V tolerant I/O) and boasts 6 serial ports with IrDA, 56+ digital I/O, quadrature encoder inputs, PWM outputs, and pulse capture and measurement capabilities. It also features a battery-backable real-time clock, glueless interfacing, and ultra-low power modes. Its compact instruction set and high clock speeds give the Rabbit 3000 blazingly fast performance for math, logic, and I/O.

Programming the Rabbit 3000:

Microprocessor hardware and software development is easy for Rabbit users. The Rabbit 3000 is programmed using the industry-proven Dynamic C® software development system from sister division Z-World. Dynamic C is an integrated C compiler, editor, loader, and debugger created specifically for Rabbit-based systems. Developing software with Dynamic C is easy. Programming and debugging are accomplished by connecting a simple interface cable from a PC to a Rabbit-based target system or over Ethernet/Internet using appropriate accessory hardware. Users can write, compile, and test C code, Assembly code, or even intermixed C and Assembly code without leaving the Dynamic C development environment. Debugging occurs while the application runs on the target, eliminating the need for costly in-circuit emulators. Alternatively, you can compile your program to an image file for later loading.

The EMI-Free Microprocessor™:

Government-mandated testing for electromagnetic interference (EMI) often proves a major headache for embedded systems design engineers. Unintentional electromagnetic radiation has the potential to derail development schedules with time-consuming board redesign or costly EMI-reducing components. The Rabbit 3000 has several powerful design features that practically eliminate EMI problems. These features are so effective that it is highly unlikely developers will ever experience EMI issues with the Rabbit 3000.

Royalty-Free TCP/IP:

Full TCP/IP stack with source code is provided royalty free in Dynamic C. TCP/IP support includes PPP (with Dynamic C Premier), socket-level TCP and UDP, FTP, TFTP, HTTP (w/ SSI and CGI), DHCP client, SMTP mail client, PING, and POP3.

Special Low-Power Features:

The Rabbit 3000 contains a number of unique low-power features that make it highly suitable for battery-powered applications. The processor offers ultra-low-speed clock options that allow the chip to operate off of a divided (/2, /4, /8, /16) version of the 32.768 kHz clock or a divided (/2, /4, /6, /8) version of the fast clock. Some types of Flash memory and SRAM consume power whenever the chip select is enabled, even if no signals are changing. The Rabbit 3000 has features to minimize the "chip select enabled" duty cycle to reduce this unnecessary power consumption when the Rabbit 3000 is running at divided clock speeds.

Low-EMI Features of the Rabbit 3000:

- A clock spectrum spreader reduces EMI amplitude derived from the clock by up to 25 dB.
- A clock doubler allows the external oscillator to operate at 1/2 the internal clock frequency.
- Separate power pins for the processor core and I/O ring prevent propagation of core noise to signal lines.
- Gated clocks in the internal logic blocks the clock-driving parts of the processor clock tree that are not in use for a particular instruction, reducing the amplitude of EMI generated by clock-related current surges.
- An auxiliary I/O bus limits loading and makes unnecessary the physical extension of fast data and address lines in the system.
- Bus architecture eliminates the need for routing the clock out of the processor.
- The spectrum spreader is especially powerful, effectively reducing clock-related EMI and derivative signals by approximately 25 dB-a design-critical amount, as devices often fail EMI tests by as little as 5 dB.

Key Programming Features:

- Fast compiler with one-step compiling and downloading to target
- Full-feature source and/or Assembly-level debugger
- Hundreds of functions in source-code libraries and sample programs
  - -Exceptionally fast support for floating-point arithmetic and transcendental functions
  - -RS-232 and RS-485 serial communications
  - -Analog and digital I/O drivers
  - -I2C, SPI, GPS, Encryption, File System
- Powerful language extensions for cooperative or preemptive multi-tasking
- Loader utility program to load binary images onto targets in the absence of Dynamic C
- Create your own source code libraries and augment on-line help by creating "function description" block comments using a special format for library functions
- Generate programs that use as much as 512K of data in SRAM and 512K of code in Flash or EPROM

Package Size	16 x 16 x 1.5 mm
Operating Voltage	1.8-3.6 V DC (5 V tolerant)
Operating Current	2 mA/MHz @ 3.3 V
Operating Temp.	-55°C to +85°C
Serial Ports	6
I/O Pins	56 (plus multipurpose pins) arranged in seven 8-bit ports
Memory Addressing Range	20 lines (1 MB), more can be interfaced easily
Timers	Ten 8-bit and one 10-bit with 2 match registers

∗ Software available à la carte. See www.mouser.com/rabbitsemi/

RCM3000 RABBIT 3000 DEVELOPMENT KIT

The Rabbit 3000® Development Kit includes an RCM3010 Ethernet core module (with Rabbit 3000 microprocessor, Flash, SRAM, Ethernet hardware, serial ports and I/O ports), a prototyping board, Dynamic C® SE development software with TCP/IP stack and documentation on CD-ROM (not a trial version), AC adapter (U.S. only), and serial cable for programming and debugging. The Rabbit 3000 microprocessor is ready for immediate software development. User programs are created using Dynamic C SE, a software development environment that includes an editor, compiler, and debugger. Programs are compiled and executed using Dynamic C and a programming cable-no costly in circuit emulator is required. Full TCP/IP source code is provided in addition to the Dynamic C software on CD-ROM.

The prototyping board included in the kit allows for immediate evaluation and development of TCP/IP or non-TCP/IP applications using the Rabbit 3000 microprocessor. Executable code can be downloaded into Flash memory or SRAM. The prototyping board provides both 3.3 V and 5 V regulated power supplies, two RS-232 communication ports, two sockets for Rabbit RCM3000 Series modules, backup battery (supports RTC and SRAM), IrDA interface, and an interface for our optional keypad/display.

Features:

- 3.3 V and 5 V regulated power supplies
- Rabbit 3000 processor running at 29.4 MHz
- 10Base-T Ethernet interface
- 52 parallel I/O (shared with peripheral features)
- 6 serial ports
- 256K Flash/128K SRAM
- 11 built-in timers
- Real-time clock
- Watchdog timer

Optional TCP/IP Toolkit:

This kit is intended to help in application development by providing the accessories needed to interface to a 10Base-T network. Includes an Ethernet hub, two Ethernet straight-thru cables, and one Ethernet crossover cable. The hub includes the four 10Base-T ports, a slim metal case, and built-in LED indicators, The Ethernet ports provide effective information exchange, resource sharing, and a client/server or peer-to-peer solution using simple UTP (unshielded twisted pair) wiring. Once powered on, the Ethernet hub is operational with no configuration required and is ideal for desktop development.

Key Benefits:

- Ethernet ready - Port to an Ethernet chip for the Rabbit 3000.
- Cost-effective - no run-time royalties
- Simplified development - A complete Dynamic C SE software package (with integrated editor, compiler, and debugger) is provided.
- No in-circuit emulator required!
- Sample demo programs, including HTTP web server and SMTP mail client, provide an advanced starting point for development.
- Quick development time - Full hardware reference schematics help reduce development efforts.

RABBIT Microprocessors, Core Modules, and Dev. Kits

RCM3100 RABBIT 3000 DEVELOPMENT KIT

The RCM3100 Development Kit includes an RCM3110 core module (with Rabbit 3000® microprocessor, Flash, SRAM, serial ports, and I/O ports), a prototyping board, Dynamic C® SE development software with documentation on CD-ROM (not a trial version), AC adapter (U.S. only), and serial cable for programming and debugging. The RCM3100 is ready for immediate software development. User programs are created using Dynamic C SE, a software development environment that includes an editor, compiler, and debugger. Programs are compiled and executed using Dynamic C and a programming cable - no costly in circuit emulator is required.

The prototyping board included in the kit allows for immediate evaluation and development of applications using the RCM3100. Executable code can be downloaded into Flash memory or SRAM. The prototyping board provides both 3.3 V and 5 V regulated power supplies, two RS-232 communication ports, two sockets for Rabbit RCM3100 Series modules, backup battery (supports RTC and SRAM), IrDA interface, and an interface for our optional keypad/display.

Features:
- 3.3 V and 5 V regulated power supplies
- Rabbit 3000 processor running at 29.4 MHz
- 54 parallel I/O (shared with peripheral features)
- 6 serial ports
- 256K Flash / 128K SRAM
- 11 built-in timers
- Real-time clock
- Watchdog timer

Key Benefits:
- Cost-effective - no run-time royalties
- Simplified development - A complete Dynamic C SE software package (with integrated editor, compiler, and debugger) is provided. No in-circuit emulator required!
- Sample demo programs provide an advanced starting point for development.
- Quick development time - Full hardware reference schematics help reduce development efforts.

RCM3200 RABBIT 3000 DEVELOPMENT KIT

The RCM3200 Development Kit includes an RCM3200 core module (with Rabbit 3000® microprocessor, Flash, 2 SRAMs, serial ports, and I/O ports), a prototyping board, Dynamic C® SE development software with documentation on CD-ROM (not a trial version), AC adapter (U.S. only), and serial cable for programming and debugging. The RCM3200 is ready for immediate software development. User programs are created using Dynamic C SE, a software development environment that includes an editor, compiler, and debugger. Programs are compiled and executed using Dynamic C and a programming cable - no costly in circuit emulator is required.

The prototyping board included in the kit allows for immediate evaluation and development of applications using the RCM3200. Executable code can be downloaded into Flash memory or SRAM. The prototyping board provides both 3.3 V and 5 V regulated power supplies, two RS-232 communication ports, two sockets for Rabbit RCM30/31/3200 modules, backup battery (supports RTC and SRAM), IrDA interface, and an interface for our optional keypad/display.

Features:
- 3.3 V and 5 V regulated power supplies
- Rabbit 3000 processor running at 44.2 MHz
- 52 parallel I/O (shared with peripheral features)
- 6 serial ports
- 512K Flash / 512K SRAM (program) & 256K SRAM (data)
- Ten 8-bit timers
- Real-time clock
- Watchdog timer

Key Benefits:
- Cost-effective - no run-time royalties
- Simplified development - A complete Dynamic C SE software package (with integrated editor, compiler, and debugger) is provided. No in-circuit emulator required!
- Sample demo programs provide an advanced starting point for development.

RCM3400 RABBIT 3000 DEVELOPMENT KIT

The RCM3400 Development Kit includes an RCM3400 core module (512K Flash/512K SRAM), a development board with 10/100Base-T Ethernet and prototyping area, Dynamic C® SE development software with documentation on CD-ROM (not a trial version), AC adapter (U.S. only), and serial cable for programming and debugging. The RCM3400 is ready for immediate software development. User programs are created using Dynamic C SE, a software development environment that includes an editor, compiler, and debugger. Programs are compiled and executed using Dynamic C and a programming cable--no costly in circuit emulator is required.

The development board included in the kit allows for immediate evaluation and development of applications using the RCM3400. Executable code can be downloaded into Flash memory or SRAM. The prototyping board provides 10/100Base-T Ethernet connectivity, both 3.3 V and 5 V regulated power supplies, two RS-232 and one RS-485 communication ports, one socket for a Rabbit RCM30/31/32/3400 module, one soket for a display or custom user device, backup battery (supports RTC and SRAM), IrDA interface, and an interface for our optional keypad/display.

Features:
- 3.3 V operation
- Powerful Rabbit 3000® microprocessor
- Low-EMI (typically <10 dB µV/m @ 3 m)
- Up to 512K Flash / 512K SRAM
- 8 channel 12-bit A/D with programmable gain
- 47 digital I/O, alternate I/O bus
- 5 serial ports (IrDA, SDLC/HDLC, asynch, SPI)
- MAC ID installed

Key Benefits:
- Cost-effective - no run-time royalties
- Simplified development - A complete Dynamic C SE software package (with integrated editor, compiler, and debugger) is provided with royalty-free TCP/IP stack.
- Sample demo programs provide an advanced starting point for development.
- Quick development time - Full hardware reference schematics help reduce development efforts.

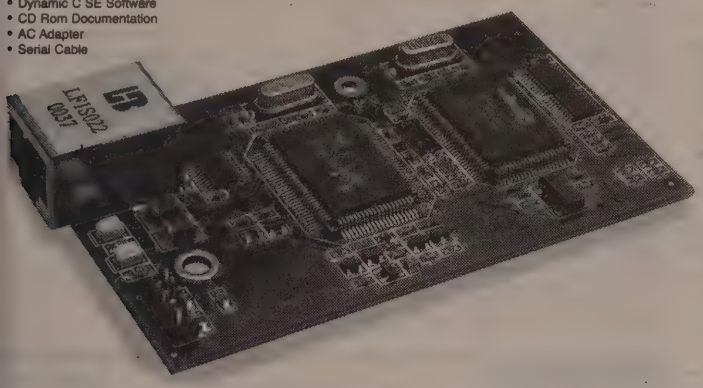
RABBIT Microprocessor Core Modules

RCM2100 RABBITCORE MICROPROCESSOR MODULES (22.1MHZ)

The RCM2100 is our full-featured RabbitCore microprocessor core module, available in four different models—2 with integrated Ethernet and 2 without. The RCM2100 features up to 512K of Flash memory and 512K of SRAM, as well as buffered external memory-addressing capability. The 34 parallel user I/O (40 for non-Ethernet) shared with 4 serial ports make local control and communication a breeze.

Development Kit Features:
- RCM2100 Microprocessor Core Module
- Prototyping Board
- Dynamic C SE Software
- CD Rom Documentation
- AC Adapter
- Serial Cable



For quantities of 100 and up, call for quote.

SRAM	512K	128K	512K	128K
Backup Battery	Connection for user-supplied battery (to support RTC and SRAM)			
General Purpose I/O	34 parallel I/O include • 20 configurable I/O • 8 fixed inputs • 6 fixed outputs (grouped in five 8-bit ports and shared with serial ports)		40 parallel I/O include • 26 configurable I/O • 8 fixed inputs • 6 fixed outputs (grouped in five 8-bit ports and shared with serial ports)	
Additional Inputs	2 Startup Mode, Reset In			
Additional Outputs	Status, Clock, Watchdog Out, Reset Out			
Memory I/O	13 buffered address, 8 buffered data, plus I/O Read-Write and Buffer Enable			
Serial Ports	Four 5 V CMOS-compatible, 2 configurable as clocked ports			
Serial Rate	Max. burst rate = CLK/32 Max. sustained rate = burst/2			
Connectors	Two 2 x 20, 2 mm IDC headers			
Slave Interface	Slave port permits use as master or as intelligent peripheral with Rabbit-based or other master controller			
Real-Time Clock	Yes			
Timers	Five 8-bit timers (four cascadable from the first) and one 10-bit timer with 2 match registers			
Watchdog/Supervisor	Yes			
Power	4.75-5.25 V DC, 140 mA			
Operating Temp.	-40° to +70°C		-40° to +85°C	
Humidity	5-95%, non-condensing			
Board Size	3.5" x 2.0" x 0.86" (89 x 51 x 22 mm)		3.5" x 2.0" x 0.5" (89 x 51 x 13 mm)	

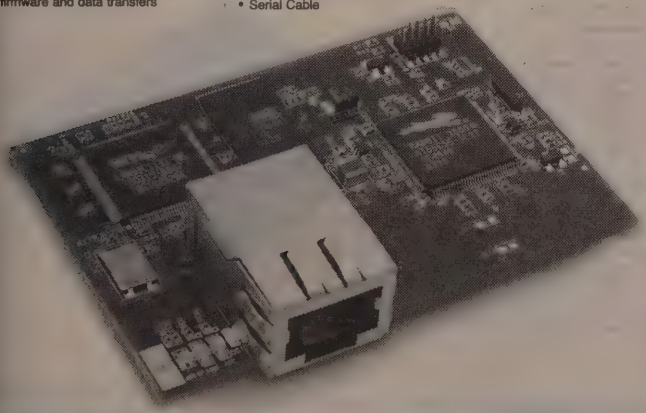
RCM3300 / 3310 / 3360 / 3370 RABBITCORE MICROPROCESSOR MODULE (44.0MHZ)

RCM3300 / 3310 / 3360 / 3370 - Smarter.Faster.Stronger

The RCM3300/3310 RabbitCore™ microprocessor core modules are ideal solutions for designers who want to rapidly develop serial Flash into their embedded application. The RCM3300/3310 offer 4 - 8 MB of serial Flash. The RCM3360 / 3370 core modules are ideal for large data applications requiring low power by adding a xD-Picture Card Connector.

Design Advantages:
- Ideal for network enabling Security & Access Systems, Home Automation, HVAC Systems, and Industrial Controls
- Reduces time-to-market by months
- Lots of storage with safe, secure firmware and data transfers

Development Kit Features:
- Microprocessor Core Module
- Prototyping Board
- Dynamic C SE Software
- CD Rom Documentation
- AC Adapter
- Serial Cable



For quantities of 100 and up, call for quote.

RabbitCore RCM3300 Specifications

Features	RCM3300	RCM3310
Microprocessor	Rabbit 3000 @ 44.2 MHz	
Ethernet Port	10/100Base-T, RJ-45, 2 LEDs	
Flash	512K	
SRAM	512K program + 512K data	
Extended Memory (Chip or removable media)	8 MB Serial Flash (chip)	4 MB Serial Flash (chip)
Backup Battery	Connection for user-supplied battery (to support RTC and SRAM)	
LED Indicators	4: ACT (activity), LINK (link), SF (serial flash) 3300/3310, PFM (Parallel Flash Memory) 3360/3370, USR (user-programmable)	
General-Purpose I/O	49 parallel digital I/O: 43 configurable / 3 fixed inputs / 3 fixed outputs	
Additional Inputs	2 Startup Mode, Reset In	
Additional Outputs	Status, Reset Out	
Auxiliary I/O Bus	8 data and 5 address (shared with I/O), plus I/O read-write	
Serial Ports	Five 3.3 V CMOS-compatible: • 5 configurable as asynchronous (with IrDA) • 3 configurable as clocked serial (SPI) • 2 configurable as SDLC/HDLC • 1 asynchronous serial port dedicated for programming	
Serial Rate	Max. asynchronous baud rate = CLK/8	
Slave Interface	Slave port permits use as master or intelligent peripheral with master controller	
Real-Time Clock	Yes	
Timers	Ten 8-bit timers (6 cascadable from the first) and one 10-bit timer with 2 match registers	
Watchdog/Supervisor	Yes	
Pulse-Width Modulators	10-bit free-running counter and four pulse-width registers	
Input Capture	2-channel input capture can be used to time input signals from various port pins.	
Quadrature Decoder	2-channel quadrature decoder accepts inputs from external incremental encoder modules.	
Power	3.15-3.45 V DC, 350 mA @ 3.3 V	
Operating Temp.	40°C to +70°C	
Humidity	5-95%, noncondensing	
Connectors - Headers - xD memory card	Two 2 x 17 (2 mm pitch). One 2 x 5, 1.27 mm programming	
No	Yes	
Board Size	1.850" x 2.725" x 0.86" (47 x 69 x 22 mm)	

RABBIT Microprocessor Core Modules

RCM3000 RABBITCORE MICROPROCESSOR MODULES (29.4 MHZ)

The RCM3000 RabbitCore is Rabbit Semiconductor's most powerful and feature-packed microprocessor core module. Powered by the new Rabbit 3000® - the "EMI-Free microprocessor" - the RCM3000 is the ideal option for designers who want to rapidly develop and implement embedded systems with fully integrated Ethernet connectivity. Measuring only 2.73" x 1.85" (69 x 47 mm), the RCM3000 operates at 3.3 V (with 5 V-tolerant I/O) and features 6 serial ports. Built-in low-EMI features, including a clock spectrum spreader, help designers eliminate the kind of emissions-related problems that frequently derail tight development schedules. Available in two models, the RCM3000 is equipped with 10Base-T Ethernet, up to 512K each of Flash and SRAM, quadrature encoder inputs, PWM outputs, and pulse capture and measurement capabilities. Two 34-pin connection headers provide 52 digital I/O shared with the 6 serial ports an alternate I/O features. The integrated Ethernet port allows instant local or worldwide connectivity. (The RCM3000 is pin compatible with the non-Ethernet RCM3100, facilitating cost-effective implementation of both Ethernet and non-Ethernet systems) The RCM3000 features a battery-backable real-time clock, glueless memory and I/O interfacing, and ultra-low power "sleepy" modes. A fully enabled slave port permits easy master-slave interfacing with another processor-based system, and an alternate I/O bus can be configured for 8 data lines and 6 address lines (shared with parallel I/O). The Rabbit 3000 processor's compact, C-friendly instruction set and high clock speeds produce exceptionally fast results for math, logic, and I/O.

Designing with RabbitCores:

The RabbitCore family of microprocessor core modules is designed to facilitate rapid development and implementation of embedded systems. RabbitCores are powered by high-performance 8-bit Rabbit microprocessors with extensive integrated features and a C-friendly instruction set designed for use with the Dynamic C® SE development system. The RabbitCore mounts on a user-designed motherboard and acts as the controlling microprocessor for the user's system. Small in size but packed with powerful features, these core modules give designers a complete package for control and communication. The integrated Ethernet port frees designers from the limitations of serial-port communications and control and permits instant local or worldwide connectivity using low-cost networking hardware. Embedded systems using the Ethernet RabbitCore module can be controlled and monitored (as well as programmed and debugged when using appropriate accessory hardware) across any network or the Internet.

Feature:	RCM3000	RCM3010
Microprocessor	Rabbit 3000 at 29.4 MHz	
Ethernet Port	10Base-T, RJ-45, 2 LEDs	
SRAM	512K	128K
Backup Battery	Connection for user-supplied battery (to support RTC and SRAM)	
Auxiliary I/O Bus	8 data and 6 address (shared with I/O), plus I/O Read-Write	
Serial Ports	6 CMOS-compatible: • 6 configurable as asynchronous (with IrDA), 4 as clocked serial (SPI), and 2 as SDLC/HDLC (with IrDA) • 1 asynchronous clocked serial port dedicated for programming • Support for MIR/SIR IrDA transceiver	
Serial Rate	Max. asynchronous baud rate = CLK/8	
Slave Interface	Slave port permits use as master or intelligent peripheral with Rabbit-based or other master controller	
Timers	Ten 8-bit timers (6 cascadable from the first) and one 10-bit timer with 2 match registers	
Pulse-Width Modulators	10-bit free-running counter and four pulse-width registers	
Input Capture	2-channel input capture can be used to time input signals from various port pins.	
Quadrature Decoder	2-channel quadrature decoder accepts inputs from external incremental encoder modules.	

Features:

- 3.3 V operation
- Powerful Rabbit 3000® microprocessor
- Low-EMI (typically <10 dB μV/m @ 3 m)
- Built-in Ethernet for simplified connectivity
- Up to 512K Flash/512K SRAM
- 52 digital I/O:
  - 44 configurable I/O
  - 4 fixed inputs
  - 4 fixed outputs
- 6 serial ports (IrDA, SDLC/HDLC, Async, SPI)
- Ultra-low power "sleepy" modes
- With Real-Time Clock: RCM(3000, 3010)
- With Watchdog/Supervisor: RCM(3000, 3010)
- Power: 3.15–3.45 V DC, 150 mA @ 3.3 V
- Operating Temp.: -40° to +70°C
- Humidity: 5-95%, non-condensing
- Additional Inputs: 2 Startup Mode, Reset In
- Additional Outputs: Status, Reset Out
- Connectors: Two 2 x 17 (2mm pitch)
- Board Size: 2.73" x 1.85" x 0.86" (69 x 47 x 22 mm)

RCM3100 RABBITCORE MICROPROCESSOR MODULE (29.4 MHZ)

The RCM3100 RabbitCore microprocessor core module is the ideal option for designers who want to rapidly develop and implement embedded systems. Powered by the new Rabbit 3000® microprocessor, the compact RCM3100 boasts powerful features and a small footprint - 1.85" x 1.65" (47 x 42 mm)–to simplify integration. The RCM3100 has 6 serial ports and operates at 29.4 MHz and 3.3 V (with 5 V-tolerant I/O). Built-in low-EMI features, including a clock spectrum spreader, help designers eliminate the kind of emissions-related problems that frequently derail tight development schedules. Available in two models, the RCM3100 is equipped with up to 512K each of Flash and SRAM, quadrature encoder inputs, PWM outputs, and pulse capture and measurement capabilities. Two 34-pin connection headers provide 54 digital I/O shared with the 6 serial ports and alternate I/O features. (The RCM3100 is pin compatible with the Ethernet RCM3000, facilitating cost-effective implementation of both Ethernet and non-Ethernet systems.) The RCM3100 features a battery-backable real-time clock, glueless memory and I/O interfacing, and ultra-low power "sleepy" modes. A fully enabled 8-bit slave port permits easy master-slave interfacing with another processor-based system, and an alternate I/O bus can be configured for 8 data lines and 6 address lines (shared with parallel I/O). The Rabbit 3000 processor's compact, C-friendly instruction set and high clock speeds produce exceptionally fast results for math, logic, and I/O.

RABBIT Microprocessor Core Modules

RCM3200 RABBITCORE MICROPROCESSOR MODULE (44.2MHZ)

The RCM3200 RabbitCore microprocessor core module is an ideal option for designers who want to rapidly develop and implement embedded systems with integrated 10/100Base-T Ethernet connectivity. Measuring only 2.73" x 1.85" (69 x 47 mm), the RCM3200 operates at 3.3 V (with 5 V-tolerant I/O) and features 6 serial ports. Built-in low-EMI features, including a clock spectrum spreader, practically eliminate EMI problems, helping OEMs pass CE and regulatory RF emissions tests. Powered by the Rabbit 3000® microprocessor running at 44.2 MHz, the RCM3200 is equipped with 512K Flash memory, 512K program execution SRAM and 256K data SRAM, quadrature decoder, PWM outputs, and pulse capture capabilities. Two 34-pin connection headers provide 52 digital I/O shared with the 6 serial ports and alternate I/O features. The integrated Ethernet port allows real-time local or worldwide connectivity. The RCM3200 features a battery-backable real-time clock, glueless memory and I/O interfacing, and low-power "sleepy" modes. A fully enabled slave port permits easy master-slave interfacing with another processor-based system, and an alternate I/O bus can be configured for 8 data lines and 6 address lines (shared with parallel I/O). The Rabbit 3000 processor's compact, C-friendly instruction set and high clock speeds produce exceptionally fast results for math, logic, and I/O. RabbitCores mount directly on a user-designed motherboard and act as the controlling microprocessor for the user's system. RabbitCores can interface with all manner of CMOS-compatible digital devices through the user's motherboard. Programs are developed with our industry-proven Dynamic C® SE development system, a C-language environment that includes an editor, compiler, and in-circuit debugger (Dynamic C SE is included in low-cost development kits). Efficient hardware and software integration facilitates rapid design and development. User programs can be compiled, executed, and debugged using Dynamic C and a programming cable-no in-circuit emulator is required. An extensive library of drivers and sample programs is provided, along with royalty-free TCP/IP stack with source.

Designing with RabbitCores:

The RabbitCore family of microprocessor core modules is designed to facilitate rapid development and implementation of embedded systems. RabbitCores are powered by high-performance 8-bit Rabbit microprocessors with extensive integrated features and a C-friendly instruction set designed for use with the Dynamic C® SE development system. The RabbitCore mounts on a user-designed motherboard and acts as the controlling microprocessor for the user's system. Small in size but packed with powerful features, these core modules give designers a complete package for control and communication. The integrated Ethernet port frees designers from the limitations of serial-port communications and control and permits instant local or worldwide connectivity using low-cost networking hardware. Embedded systems using the Ethernet RabbitCore module can be controlled and monitored (as well as programmed and debugged when using appropriate accessory hardware) across any network or the Internet.

Feature:	RCM3200
Microprocessor	Rabbit 3000 at 44.2 MHz
Ethernet Port	10/100Base-T, RJ-45, 3 LEDs
SRAM	512K program + 256K data
Backup Battery	Connection for user-supplied battery (to support RTC and SRAM)
Auxiliary I/O Bus	8 data and 6 address (shared with I/O), plus I/O Read-Write
Serial Ports	6 CMOS-compatible: • 6 configurable as asynchronous (with IrDA), 4 as clocked serial (SPI), and 2 as SDLC/HDLC (with IrDA) • 1 asynchronous clocked serial port dedicated for programming • Support for MIR/SIR IrDA transceiver

RCM3400 RABBITCORE MICROPROCESSOR ANALOG MODULE (29.4MHZ)

The RCM3400 analog RabbitCore provides a known-good processor and analog input subsystem for OEMs to quickly integrate into custom designs. The RCM3400 features a low-EMI Rabbit 3000-based CPU subsystem running at 29.4 MHz, with 512K Flash / 512K SRAM or 256K Flash / 256K SRAM, 5 serial ports, and 8 channels of programmable gain analog input in an extremely small footprint (1.37" x 1.16" / 34 x 29 mm). The RCM3400 comes with a pre-assigned MAC I.D. to be Ethernet ready and the development board features 10/100Base-T Ethernet and can be used as a reference design in conjunction with Dynamic C's royalty-free TCP/IP software libraries. Extensive demo programs and software application templates make it easy to get the RCM3400 up and running in record time. RabbitCores mount directly on a user-designed motherboard and can interface with all manner of CMOS-compatible digital devices. Two 34-pin connectors route 47 digital I/O (shared with serial ports), power, and other signals to the motherboard. Built-in low—EMI features, including a clock spectrum spreader, practically eliminate EMI problems, helping OEMs pass CE and regulatory RF emissions tests. The RCM3400 is equipped with 5 V tolerant I/O, quadrature encoder inputs, PWM outputs, and pulse capture and measurement capabilities. The RCM3400 also features a battery-backable real-time clock, glueless memory and I/O interfacing, and low-power "sleepy" modes. A fully enabled 8-bit slave port permits easy master-slave interfacing with another processor-based system, and an alternate I/O bus can be configured for 8 data lines and 6 address lines (shared with parallel I/O). Programmed with Dynamic C, the RCM3400 executes math, logic, and I/O exceptionally quickly. The Rabbit 3000 chip, RCM3400, and Dynamic C were designed in a complementary fashion for maximum performance and ease of use in embedded systems. Our industry-proven Dynamic C® development system is a C—language environment that includes an editor, compiler, and in-circuit debugger. User programs can be compiled, executed, and debugged using Dynamic C and a programming cable-no in-circuit emulator is required. An extensive library of drivers and sample programs is provided, including royalty-free TCP/IP stack with source code.

Feature:	RCM3400	RCM3410
Microprocessor	Rabbit 3000 at 29.4 MHz	
Analog Inputs	8 channels single-ended (11-bit) or 4 channels differential (12-bit) Programmable gain: 1, 2, 4, 5, 8, 10, 16, and 20 V/V. Vref, Convert	
Backup Battery	Connection for user-supplied battery (to support RTC and SRAM)	
Flash	512K	256K
SRAM	512K	256K
Auxiliary I/O Bus	8 data and 6 address (shared with I/O), I/O Read-Write	
Serial Ports	5 CMOS-compatible: • 4 configurable as asynchronous (with IrDA), 3 as clocked serial (SPI), and 2 as SDLC/HDLC (with IrDA) • 1 asynchronous serial port dedicated for programming • Support for MIR/SIR IrDA transceiver	
Serial Rate	Max. asynchronous baud rate = CLK/8	
Timers	Ten 8-bit timers (6 cascadable from the first) and one 10-bit timer with 2 match registers	
Pulse-Width Modulators	10-bit free-running counter and four pulse-width registers	
Input Capture	2-channel input capture can be used to time input signals from various port pins.	
Quadrature Decoder	2-channel quadrature decoder accepts inputs from external incremental encoder modules	

Designing with RabbitCores:

See details at the top of the page.

Features:

- 3.3 V operation
- Powerful Rabbit 3000® microprocessor
- Low-EMI (typically <10 dB μV/m @ 3 m)
- MAC ID installed
- 47 digital I/O: 41 configurable I/O, 3 fixed inputs, 3 fixed outputs
- Slave Interface: Slave port permits use as master or intelligent peripheral with Rabbit-based or other master controller
- With Real-Time Clock: RCM(3400, 3410)
- With Watchdog/Supervisor: RCM(3400, 3410)
- Operating Temp.: –40°C to +85°C
- Humidity: 5-95%, non-condensing
- Additional Inputs: 2 Startup Mode, Reset In
- Additional Outputs: Status, Reset Out
- Connectors: Two 2 x 17 (1.27 mm pitch)
- Board Size: 1.37" x 1.16" x 0.31" (35 x 29 x 7.4 mm)

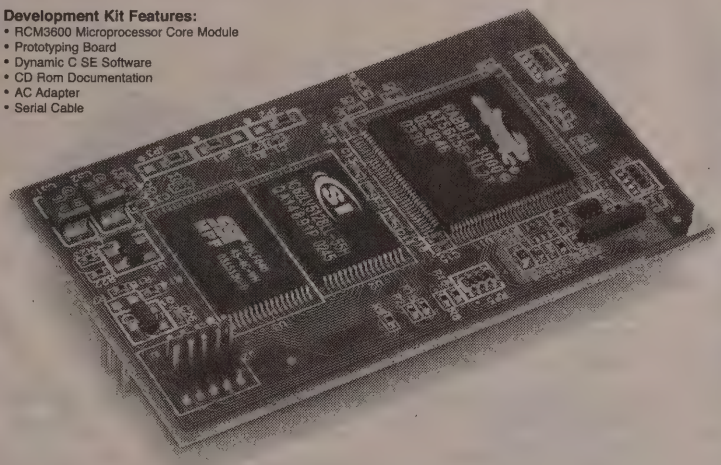
RABBIT Microprocessor Core Modules

RCM3600/3610 RABBITCORE MICROPROCESSOR MODULE (22.1MHZ)

The RCM3600 RabbitCore is the lowest priced Rabbit 3000 microprocessor based core module designed for a wide variety of applications. The RCM3600 features 512K Flash / 512K SRAM or 256K Flash / 128K SRAM, 4 serial ports, and an extremely small footprint (2.10" x 1.20" / 34 x 29 mm).

This RabbitCore mounts directly on a user-designed motherboard with a single 0.1" (2.54 mm) 2x20 dual-row IDC header and can interface with all manner of CMOS-compatible digital devices. 33 digital I/O (shared with serial ports), power, and other signals are routed directly to the motherboard. Built-in low – EMI features, including a clock spectrum spreader, practically eliminate EMI problems, helping OEMs pass European CE and other regulatory RF emissions tests.

Development Kit Features:
- RCM3600 Microprocessor Core Module
- Prototyping Board
- Dynamic C SE Software
- CD Rom Documentation
- AC Adapter
- Serial Cable



For quantities of 100 and up, call for quote.

RABBIT Ethernet and M2M Development Kits

RABBIT SERIAL-TO-ETHERNET

Ethernet designers now have a Serial-to-Ethernet Application Kit that is easy to use out of the box. The simple 3-Step Setup for transmitting data from a digital volt meter via a serial port to a TCP/IP stream enables even the newest user to quickly develop a Serial-to-Ethernet application. The kit features digital volt meter software libraries, sample programs and a menuing system, in addition to the Dynamic C integrated development environment. The digital volt meter application software provides a framework for users to start their design with minimal time and effort (volt meter not included in kit).

The Serial-to-Ethernet Application Kit includes a popular RCM3000 RabbitCore module featuring 10Base-T Ethernet and TCP/IP libraries with source code. Measuring only 2.73" x 1.85" (69 x 47 mm) the RMC3000 operates at 3.3V (with 5 V-tolerant I/O) and features 6 serial ports and 52 digital I/O. Available in two models, the RCM3000 is equipped with up to 512K each of Flash and SRAM, quadrature encoder inputs, PWM outputs, and pulse capture and measurement capabilities. Two 34-pin connection headers provide 52 digital I/O shared with the 6 serial ports and alternate I/O features.

Features:

- Serial to Ethernet applications for:
- Digital Volt Meter reader
- Binary & hexadecimal ASCII
- Configuration menuing system
- Royalty-free TCP/IP stack with source code

Design Advantages:

- 3 Step setup
- Minimal Ethernet experience required
- Software compatible with other Rabbit-based products

Serial to Ethernet Application Kit Specifications:

Feature	Serial-to-Ethernet Application Kit
Core Module	RCM3010
Prototyping Board	Standard RCM3000 Prototyping Board
Ethernet	10Base-T, RJ-45
Serial Ports	1 RS-232 hardware defined (additional ports available on RCM3010)
Cables	DB9 Null Modem Cable
Software Compiler	DB9 Null Modem Cable, 10-pin ® DB9 Conversion Cable, Ethernet Crossover Cable Programming Cable
Software Library	Allow faster serial communications: 1 Mbit/s
Sample Programs	Transmit data from DVM and store on a PC
Menuing Systems	For Serial-to-Ethernet configuration
Manuals	Serial-to-Ethernet 3-Step Setup Sheet, RCM3000 Getting Started Manual, RCM3000 User Manual (on CD)
Display	122 x 32 Keypad/Display Unit with LCD menu system

RABBIT MACHINE TO MACHINE (M2M) APPLICATION KIT

M2M (machine-to-machine/mobile) brings together **machine control with wireless communications**. With 50 billion "machines" in the world, M2M allows a machine to be monitored or controlled from anywhere, anytime, using current wireless data technologies such as GSM, SMS (text messaging) and GPRS.

Rabbit Semiconductor's M2M Applications Kit provides all the tools necessary to sample and design communications between a Rabbit-based device to a GSM/GPRS-enabled device (e.g. GSM modem/phone, PDA phone). The libraries and sample programs allow for a GSM modem/phone to send SMS (text) messages to a RabbitCore module (RCM) that can interpret messages as commands and in turn can execute control functions. The RCM can also send/receive email from any PC, device or phone. A menu system allows for easy interface on the keypad/display, as well as reading text messages and email. The M2M Application Kit includes Z-World's Dynamic C software with royalty-free TCP/IP stack and PPP module.

Machine2ME Node
Is a configuration involving an Ethernet-enabled Rabbit-based device at the heart of a Machine equipped with a GSM modem.
The Rabbit-based device acts as a server/node to other Ethernet devices. So a single Rabbit device with a wireless modem can control a number of Ethernet devices.

M2M Applications Kit Highlights:

- HW/SW for wireless RCM-to-GSM communication
- Dual Band GSM/GPRS modem and antenna
- Keypad/Display configuration menu system
- Royalty-free TCP/IP stack with source code & PPP
- Samples/Libraries including Machine2ME Node Applications

Applications:

- Wireless Embedded Control
- Alarms & Notification Systems
- Remote Device Monitoring
- Data and Event Logging
- Machine Communication

M2M Application Kit Specifications:

Feature	Serial-to-Ethernet Application Kit
Control Device and Display System	
Microprocessor Core Module	RCM3200 RabbitCore module
Microprocessor	Rabbit 3000 running at 44.2 MHz
Ethernet Connectivity	10/100Base-T, RJ-45
Memory	512K Flash, 512K SRAM (program). 256K SRAM (data)
General Purpose I/O	52 digital I/O, Auxiliary I/O Bus
Prototyping Board	RCM3200 Prototyping Board
Serial Ports	RS-232 (2 3-wire or 1 5-wire). Additional CMOS ports available on RCM3200
Display	122 x 32 Keypad/Display Unit with LCD menu system
GSM Modem	Wavecom Fastrack Dual Band GSM/GPRS modem (900/1900 MHz for US Kit, 900/1800 MHz for International Kit)
Antenna	Wave Device Antenna. 90° Adjustable Knuckle Antenna (1850-1990 MHz for US Kit, 870-960MHz for International Kit)
SIM Card (US Kits only)	T-Mobile SIM card (Activation required)
Software Development System	
Software Compiler	Z-World's Dynamic C 8.x with TCP/IP stack
Software Libraries	SMS/GPRS modes, Modem-specific Library
Additional Libraries	Dynamic C PPP module, Generic Modem Library, TCP/IP, SMTP, POP3, Telnet
Sample Programs	For SMS and GPRS communication and control Machine2ME components. FTP datalogging
Menuing System	For display of SMS and GPRS communications
Included Accessories	
Cables	Programming Cable for RCM 10-pin ® DB15 Conversion Cable Ethernet Crossover Cable
Documentation	M2M Applications Kit Getting Started Manual RCM3200 Getting Started Manual Full Documentation on CD
Power Supplies (US Kits Only)	9 V DC adapter for RCM3200 12 V DC, 1 Amp (min.) for GSM Modem. Power cable included.

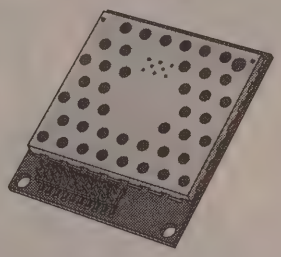
AEROCOMM Embedded Wireless Modules

900 MHZ AC4490 SERIES - SERVER/CLIENT PROTOCOL

Compact AC4490 900MHz transceivers can replace miles of cable in harsh industrial environments. Using field-proven FHSS technology that needs no additional site licensing*, AC4490s reject interference, enable co-located system operation, increase output power and maintain data integrity.

AC4490s feature drop-in installation and a number of on-the-fly control commands, providing OEMs with a versatile interface for any application. They can be used as direct wire replacements, requiring no special host software for communication. All frequency hopping, synchronization and RF system data transmission/reception is performed by the transceiver.



Features:

- High 900MHz data rate: 115.2 Kbps
- Small form factor: 1.65 x 1.9 inches
- Operates in –40°C to +80°C temperatures
- Variable output power: 5mW to 1000mW
- One full watt enables 20-mile possible range
- Lowest cost one-watt module available

Parameter	AC4490-200	AC4490-1000
Interface	20-pin mini connector	20-pin mini connector
Frequency*	902-928 MHz (U.S)**	902-928 MHz (U.S)**
Modulation	FHSS FSK	FHSS FSK
Serial Interface Options	3V or 5V TTL	3V TTL
Serial Interface Data Rate	Up to 115.2 Kbps	Up to 115.2 Kbps
Output Power (w/ 3dBi antenna)	5mW-200mW variable	5mW-1000mW variable
Power Consumption†	68 mA typical @ 200mW	765 mA typical @ 1000mW
Channels	Up to 48 (U.S.)**	Up to 32 (U.S.)**
Security	One-byte system ID, DES	One-byte system ID, DES
Voltage	3.3V-5.5V	pin 10: 3.3V-5.5V pin 11: 3.3V +/-3%
Sensitivity	-99 dB @ full RF data rate	-99 dB @ full RF data rate
Range	Up to 4 miles (6.5 km)	Up to 20 miles (32 km)
Temperature	-40° to +80°C	-40° to +80°C
Humidity (non-condensing)	10% to 90%	10% to 90%
Dimensions	1.90 x 1.65 x 0.20 inches (49 x 42 x 5 mm)	1.90 x 1.65 x 0.20 inches (49 x 42 x 5 mm)
Weight	< 0.75 oz (< 21 g)	< 0.75 oz (< 21 g)
Antenna	Integrated and external dipole	External dipole

* The 900MHz frequency band is approved in the Americas and Australia an an unlicensed spectrum subject to approval by device.
** For products and specifications suited to non-U.S. countries, please contact AeroComm directly.
† Power consumption assumes 50% transmitter on-time.

For quantities of 100 and up, call for quote.

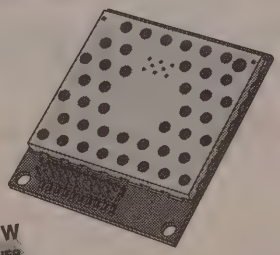
900 MHZ AC4790 SERIES - PEER/PEER PROTOCOL

High-performance AC4790 transceivers utilize AeroComm's "masterless" protocol, allowing each transceiver to communicate with any other in-range transceiver for true peer-to-peer operation.

Using field-proven 900MHz FHSS technology that needs no additional site licensing*, AC4790s reject interference, enable co-located system operation, increase output power and maintain data integrity.

AC4790's protocol features a dynamic addressing scheme, which simplifies the most efficient transmission path, so OEMs can design routing sequences that optimize the RF network. This makes AC4790 ideal for a wide variety of RF network. This makes AC4790 ideal for a wide variety of industrial applications that must rely on smooth, constant data flow.



NEW FROM SUPPLIER

Features:

- True peer-to-peer protocol
- Small form factor: 1.65 x 1.9 inches
- API commands to control packet routing
- Software-controlled sensitivity
- Remote radio discover

900 MHZ WIRELESS TRANSCEIVER MODULE DEVELOPMENT KITS AND ANTENNAS

AeroComm provides a complete development environment to help you integrate and test RF communication in a matter of minutes.

Development Kits Include:

- 2 Transceivers
- 2 Adapter Boards
- Software Utilities
- 2 AC Power Adapters
- 2 DB9 serial cables
- 2 USB cables
- 2 Dipole Antennas
- Documentation

System Requirements:

- Win® 95, 98, ME, NT, XP, or 2K
- Two PCs each with one serial port, or one PC with two serial ports

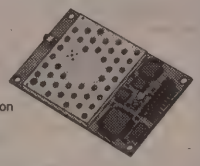
2.4 GHZ AC4424 SERIES - WIRELESS TRANSCEIVER MODULES, FLEXIBLE PROTOCOL



AC4424 is a 2.4GHz FHSS digital transceiver that represents a breakthrough in industrial RF communication. Comprised of a complete, agency-certified radio and sophisticated RF232® protocol, AC4424 simplifies the OEM's design effort and assures successful field operation.

RF232 makes AC4424 a drop-in module for seamless integration, easy operation and fast time-to-market. As each transceiver receives raw data, it manages protocol over-the-air to assure successful transmissions. Headers, data packet length and CRCs are not needed. The process is transparent to the OEM.

AC4424 modules are socket-compatible with AeroComm's 900MHz AC4490 transceivers, enabling OEMs to design once and subsequently interchange radios to accommodate new markets, regulations and environments.* Developer tools and support back every transceiver line.

* Although AC4424s will not talk to AC4490s, socket-compatibility allows for seamlessly interchanging the modules network-wide.
** Power consumption assumes 50% transmitter on-time.
† 32 channels in U.S.; 16 channels in Spain, 16 channels in France.

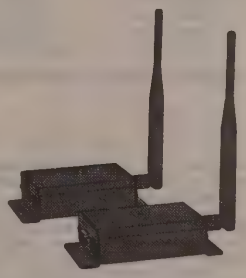
2.4 GHZ CONNEX MODEM™

ConnexModem is a powerful 2.4GHz radio transceiver combined with a 56K data/fax modem. The system can be set up in minutes to enable wireless communication between local RS232 devices and any standard phone line. Proprietary FHSS technology ensures reliable, secure transmissions even in RF-hostile environments.

The ConnexModem system is comprised of a remote node (ConnexPC, which enables local wireless data transmissions) and a telecom node (ConnexModem, which bridges the local wireless link to a telecom system for longer-range communication).

Features:
- Communicate to telecom lines thousands of feet away
- Check on the status of equipment via telephone and IP
- "Connect" internet appliances to distant phone jacks
- Talk around corners and through walls—no holes to drill or wires to hide

CM5124 Parameters:
- Standard Interface: ConnexModem: dual RJ11 ConnexLink: RS232 (DB9 male) RS485 or RS422 (RJ11)
- Interface Data Rate: Up to 56 Kbps
- Output Power: 200mW
- Input Power: 6VDC to 18VDC
- Power Consumption (typical): ConnexModem: 600mA, ConnexLink: 400mA
- Power Supply: AC transformer to 6VDC via 6-foot cable (183 cm)
- Electrical Requirements: Line voltage 100–120V (240V outside U.S.); Freq. 50–60Hz
- Transmission Range (typical): Up to 500 feet (152 m) indoors (actual depends on environment); Up to 3 (5 km) miles line of sight
- Operating Environment: -40° to +80°C 10% to 90% humidity



For quantities of 10 and up, call for quote.

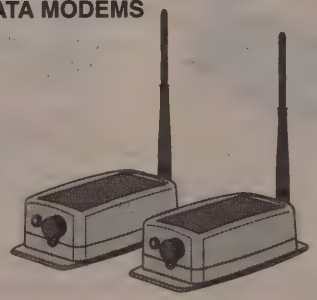
900MHZ ACE INDUSTRIAL WIRELESS DATA MODEMS

AeroComm's ACE RF data modems combine high performance and reliability with heavy-duty packaging designed to withstand harsh environmental conditions- splashing water, corrosive agents, dirt, ice and snow ACEs suit rugged industrial applications where outdoor communications and NEMA-4x ratings are essential. ACEs provide high output power to deliver line-of sight ranges up to 20 miles with high-gain antennas.

ACE modems are completely compatible with AeroComm's AC4490 transceivers and CL4490 commercial modems. This allows OEMs to construct systems which utilize ruggedized devices only where necessary, saving system costs.



ACE Product Highlights:

NEW FROM SUPPLIER

- NEMA-4x rated packaging

AEROCOMM Embedded Wireless Modules

AEROCOMM

900MHZ / 2.4 GHZ CONNEX LINK™

ConnexLink stand-alone transceivers can be set up in minutes to virtually cut the cables between RS232 or RS485 devices. Their flexibility and price allow users to quickly upgrade wired terminals to cordless operation in industrial, commercial, even residential applications.

ConnexLink Highlights:

- Durable industrial-grade enclosure
- Transmits around corners, through walls
- Reliable communication up to 288 Kbps
- Point-to-point & point-to-multipoint setups
- Quickly replace serial cable in both old and new equipment
- Move links from machine to machine without costly rewiring
- CL4790-1000 can be used for True Peer to Peer Protocol

900MHZ FHSS CONNEXNET™

ConnexNet provides a complete hardware and software solution for adding wireless network connectivity to serial-based applications. The transceiver serves as a conduit between the user and multiple destination devices via a local network or Internet connection. It integrates a fully developed TCP/IP network stack and OS using a variety of network protocols to make distant networking both easy and reliable.

Each unit is small and easily portable for use in mobile and temporary settings as well as for fixed installations. ConnexNet software enables custom configurations based on unique application requirements, and simplifies installation and setup. The network settings can be configured remotely over a network (password protected).

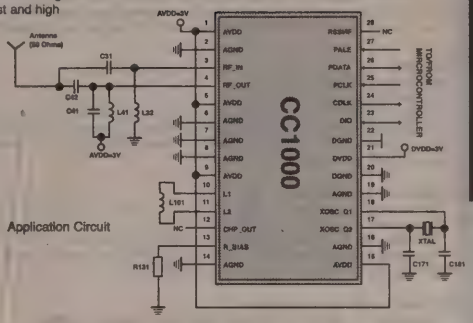
CHIPCON Single-Chip RF Transceivers

CC1000/CC1050 ULTRA-LOW POWER UHF TRANSCEIVER/TRANSMITTER CHIPS

The CC1000 is a true ultra-low-power single-chip RF transceiver for the 315, 433, 868, 915 MHz bands. It has been specifically designed to comply with the most stringent demands of the low power radio market. Based on a pure CMOS technology, this is the first product in the market that offers a unique combination of low cost and high integration, performance and flexibility, thus setting a new standard for short-range, wireless communication.

Features:
- Single-chip RF transceiver
- Programmable frequency: 300-1000MHz
- Very low current consumption: Rx: 7.4mA
- Very few external components required
- FSK modulation spectrum shaping (optional)
- Low supply voltage: 2.1-3.6V
- High receiver sensitivity: -110dBm
- RSSI output
- FSK data rate up to 76.8kBaud
- Programmable output power: -20 to 10dBm
- Crystal temperature drift compensation possible without use of external TCXO
- Programmable frequency in 250Hz steps
- Suitable for frequency hopping protocols
- No external RF switch /IF filter required
- Integrated bit synchronizer
- Single-port antenna connection
- Small 28-pin TSSOP package
- Complies with EN 300220 and FCC CFR 47, part 15

Applications:
- Home automation
- Remote keyless entry
- Automatic meter reading
- Wireless alarm and security systems
- Toys and PDAs
- Audio/voice
- 315/433/868/915 MHz SRD band systems



Application Circuit

CC1020/CC1021/CC1070 NARROWBAND UHF RF TRANSCEIVER/TRANSMITTER CHIPS

CC1020 Transceiver:
The industry's first single-chip FSK/ASK CMOS RF transceiver for narrowband applications in the 402-470 & 804-940 MHz range.

CC1021 Transceiver:
A multichannel FSK/ASK CMOS RF transceiver for narrowband applications, with channel spacings of 50kHz or higher, in the 402-470 & 804-940 MHz range.

CC1020/CC1021 Key Features:
- Frequency range: 402-470-MHz & 804-940 MHz
- Low current consumption: RX: 17.3mA
- Low supply voltage: 2.3-3.6V
- Very few external components required
- Small size: QFN 32 package
- Single port antenna connection
- Data rate up to 153.6kBaud
- ASK, FSK, and GSFK data modulation
- Complies with EN 300 220, FCC CFR47 part 15, and ARIB STD T-67

CC1070 Transmitter Only:
A true single-chip, low-power, low-cost CMOS FSK/GFSK/ASK/00K RF Transmitter for narrowband and multi-channel applications.

CC1070 Key Features:
- Frequency ranges: 402-470MHz & 804-940MHz
- Low supply voltage: 2.1-3.6V
- Very low current consumption
- Requires very few external components
- Data rate up to 153.6 kbps FSK/GFSK/ASK/OOK modulation formats
- Fully on-chip VCO
- Programmable frequency in steps less than 300Hz makes crystal temperature drift compensation possible without TCXO
- Single port antenna connection
- Complies with EN 300 220, FCC CFR 47 part 15, and ARIB STD-T67

CC1010 UHF RF TRANSCEIVER WITH ONBOARD 8051 MICROCONTROLLER CHIP

The industry's first truly complete RF System-on-Chip solution! On a single die, the award winning 300-1000MHz CMOS CC1000 RF Transceiver has been integrated with an industry standard 8051 microcontroller core. The CC1010 integrates a very low-power 300-1000MHz RF Transceiver and a 8051-Compatible Microcontroller that has 32 kB in-system programmable Flash, hardware DES encryption/decryption and a three channel 10-bit ADC. This means only a few external passive components are necessary to make a powerful embedded system with wireless communication capabilities, sensor interfacing possibilities, and a lot of processing power.

CC1010 Key Features:
- Programmable frequency range: 300-1000MHz
- High sensitivity: typically -107dBm @ 1.2, kbit/s
- Programmable output power: -20 to 10dBm
- Very low current consumption: RX: 9.1mA
- No external RF switch or IF filter required
- Fast PLL settling allows frequency hopping protocols
- FSK modulation with a data rate of up to 76.8kbit/s
- RSSI output which can be sampled by on-chip ADC
- Complies with EN 300 220 and FCC CFR47 part 15

8051-Compatible Microcontroller:
- High performance, 24MHz, low power
- Optimized 8051-core typically gives 2.5x the performance of a standard 8051
- Dual data pointers
- Idle and sleep modes
- In-circuit interactive debugging is supported for the Keil™ iVision IDE through a simple serial interface

Data & Non-volatile program memory:
- 32kB of non-volatile Flash memory in-system programmable through a simple SPI interface or by the 8051 core
- Typical Flash endurance: 20,000 write/erase cycles
- Programmable read & write lock of portions of Flash memory for software security
- 2048 + 128 Byte of internal SRAM

CHIPCON Single-Chip RF Transceivers

Chipcon

CC1100/CC1150 LOW-COST UHF TRANSCEIVER/TRANSMITTER CHIPS

The CC1100 multi-channel RF transceiver is the world's lowest total system cost radio intended for use in the 315, 433, 868, and 915 MHz frequency bands. With its very low power consumption and excellent radio performance, the CC1100 is a perfect solution for applications in for instance home and building automation, wireless alarm and security systems, and consumer electronics, to mention a few. The CC1100 transceiver is based on Chipcon's latest product platform, the SmartRF®04 Technology, which is built upon an advanced 0.18µm CMOS technology facilitating superior RF performance in combination with high-density and low-power integration of digital modules.

Features:
- Market's lowest system cost.
- Very few external components required.
- Very small footprint. The CC1100 comes in a 4x4mm, 20-pin QLP package.
- Reference design with two-layer PCB and all components mounted on the same side.
- CC1100's many powerful digital features make it easy to build a high-performance RF system using an inexpensive microcontroller.

Excellent Radio Performance:
- High sensitivity: -110dBm @ 1.2kbps
- Programmable data rate from 1.2-500kbps.
- Robust solution with excellent selectivity and blocking performance.
- Programmable output power up to +10dBm for all supported frequency bands.
- Ideal for multichannel operation: 50-500kHz channels

Very low power consumption:
- RX: 15.6mA, TX: 28.8mA @ +10dBm output power, Powerdown: 400mA.
- Burst mode data transmission with high over-the-air data rate reduces current consumption.
- Automatic RX polling using Wake-on-Radio: 1.8µA.

Applications:
- Home and building automation
- Automatic meter reading (AMR)
- Wireless alarm and security systems
- Industrial monitoring and control
- Wireless sensor networks
- Consumer electronics
- Ultra low-power wireless applications.
- Operating in the 315, 433, 868, 915 MHz ISM/SRD bands

CC2500/CC2550 2.4 GHZ LOW COST RF TRANSCEIVER/TRANSMITTER CHIPS

The CC2500 is a highly integrated multichannel RF transceiver designed for low-power wireless applications in the 2.4GHz Industrial Scientific Medical (ISM) band. The CC2500 is part of Chipcon's SmartRF04 Technology platform based on an advanced 0.18µm CMOS technology facilitating superior RF performance in combination with high-density and low-power integration of digital modules. The CC2500 can be used in a wide range of applications, such as wireless game controllers, wireless keyboard/mouse, consumer electronics, wireless audio, and sports, and leisure equipment.

Key Features:
- Market's lowest system cost.
- Very low unit price per chip.
- Very few external components required; all are low cost type.
- Reference design with two layer PCB with all components mounted on the same side.
- Very small footprint. The CC2500 comes in a 4x4mm, 20-pin QFP package.
- CC2500's many powerful digital features allow building a high-performance. RF system using an inexpensive microcontroller.

Very Low Power Consumption:
- RX: 15.6mA, TX: 21.6mA @ 0dBm output power
- Burst mode data transmission with high over-the-air data rate reduces current consumption.

Excellent Radio Performance:
- High sensitivity (PER: -98dBm @ 10kbps, PER: -88dBm @ 250kbps)
- Programmable data rate from 1.2-500kbps.
- Robust solution with excellent selectivity and blocking performance.
- Programmable output power up to 0dBm.
- Ideal for multichannel operation (50-500kHz channels).
- Full packet handling including preamble generation, sync word insertion/detection, address check, flexible packet length, and automatic CRC.
- Programmable carrier sense indicator and digital RSSI output enables adaptive channel selection with increased robustness of the communication link.

Applications:
- Wireless game controllers
- Wireless keyboard/consumer electronics
- Wireless audio
- Sports and leisure equipment

CHIPCON Single-Chip RF Transceivers

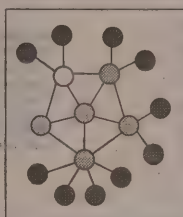
Chipcon

CC2420 2.4 GHZ RF TRANSCEIVER CHIP FOR IEEE 802.15.4 AND ZIGBEE™

The CC2420 is a low-cost transceiver designed specifically for low-power, low-voltage RF transceiver applications in the 2.4GHz unlicensed ISM band. It is the first commercially available RF compliant with the IEEE 802.15.4 standard and the first RF-IC that can be qualified for use in 2.4GHz ZigBee™ products. For the CC2420 RF transceiver, Chipcon provides IEEE/802.15.4 MAC software free of charge.

WHAT IS ZIGBEE?

The ZigBee standard has been developed by the ZigBee Alliance, an association of companies working together, to enable reliable, cost-effective, low-power, wirelessly networked monitoring and control products based on an open global standard. The goal of the ZigBee Alliance is to provide the consumer with ultimate flexibility, mobility, and ease of use by building wireless intelligence and capabilities into every day devices. ZigBee technology will be embedded in a wide range of products and applications across consumer, commercial, industrial, and government markets worldwide. For the first time, companies will have a standards-based wireless platform optimized for the unique needs of remote monitoring and control applications, including simplicity, reliability, low-cost, and low-power. The ZigBee communication standard is essential for the growth of wireless home and building automation applications where various end products need to communicate with each other.



ZIGBEE MESH NETWORKING

The PHY and MAC layers are defined by IEEE 802.15.4. ZigBee enables reliable and secure mesh, star and cluster-tree network topologies with interoperable application profiles.

Mesh networks allow for high levels of reliability and scalability by providing routes through the network.

- PAN COORDINATOR (Full Function Device)
- COORDINATOR (Full Function Device)
- DEVICE (Reduced or Full Function Device)

WHY ZIGBEE?

Other short-range standards, such as Bluetooth and Wi-Fi, are not designed for low power monitoring and control applications. With ZigBee, however, the case is different. ZigBee is the only standard that specifically addresses the typical requirements for wireless control and monitoring applications, such as:

- Large number of nodes/sensors
- Very low system/node costs
- Operation for years on inexpensive batteries
- Reliable and secure links between network nodes
- Easy deployment and configuration
- Global solutions

Applications:

- Home and building automation
- Industrial monitoring and control
- Sensor networks
- Automotive networks
- Intelligent toys
- Consumer electronics

CC2420 Key Features:

- True single-chip 2.4 GHz IEEE 802.15.4/ZigBee(tm) RF transceiver w/MAC support
- Suitable for FFDs (Full Function Devices) & RFDs (Reduced Function Devices) defined by IEEE 802.15.4 & ZigBeetm
- DSSS modem w/ 2 Mchips/s & 250kbps effective data rate
- Low current consumption: RX: 19.7mA, TX: 17.4mA
- Low supply voltage with internal voltage regulator: 2.1V -3.6V
- No external RF switch/filter needed
- Programmable output power
- I/Q low-IF receiver
- I/Q direct up-conversion transmitter
- Few external components
- Packet handling with 128 byte (RX) +128 byte (TX) data buffering
- Digital RSSI/LQI support
- Hardware MAC encryption and authentication (AES-128)
- Battery monitor
- QLP-48 package (7x7 mm)
- Complies with EN 300 440, FCC CFR 47 part 15, and ARIB STD-T66
- Powerful, flexible development tools available
- Easy-to-use software for performance evaluation

839-2420EMK	CC2420EMK	Evaluation Module Kit - two CC2420EM evaluation modules and two antennas	140.00
839-2420-ZIGBEE-DK	CC2420 ZIGBEE DK	Full Development Kit - five CC2420 DB and a CC2420 EB that together, with a CC2420EM, can utilize the capability of running Chipcon's packet sniffer with the new ZigBee packet parser addition. Z-Stack object code, tools, and documentation will be provided as an End Customer distribution package, available for download from the Chipcon ZigBee developer site	5000.00

CC2400 2.4 GHZ RF TRANSCEIVER CHIP

The CC2400 is a true low-cost, low-power single-chip 2.4 GHz ISM band transceiver with extensive hardware features. When cost, size, and world-wide compliance are major design criteria, the CC2400 provides the optimum solution for an effective and reliable two-way wireless digital communication link.

Key Features:

- True single-chip 2400 - 2483.5 MHz RF Transceiver
- GFSK and FSK modulation
- Very low current consumption (RX: 24 mA)
- High sensitivity: -85dBm @ 1Mbps, BER = 10-3
- Programmable over-the-air data rate: 10kbps, 250kbps, or 1Mbps
- Low chip core supply voltage: 1.6-2.0V
- Flexible I/O supply voltage: 1.6-3.6V
- Requires very few external components
- Programmable output power
- Programmable baseband modem
- Digital RSSI carrier sense output
- Agile frequency synthesizer
- Packet handling hardware support
  - Preamble generator with programmable length
  - Programmable synchronization word insertion/detection
  - CRC-16 computation over the data field
  - 8B/10B line coding option
- Data buffering: 32 byte FIFO
- Easy-to-use software for generating the CC2400 configuration data
- Small size (QFN-48 package) 7x7mm
- Complies with EN 300 440, FCC CFR47 part 15, & ARIB STD-T66

Applications :

- Game controllers
- Wireless headsets
- Sports and leisure equipment
- Wireless mouse and keyboards
- Remote controls
- Audio/voice applications
- Joysticks

DLP DESIGN IEEE 802.15.4 / ZigBee™ Modules

The DLP-RF1 and DLP-RF2 OEM Modules are short-range, low-power, 2.4-GHz, unlicensed worldwide ISM band transceivers designed around the IEEE 802.15.4 Wireless Standard. Both support point-to-point and star network configuration using preprogrammed firmware.

The RF1 and RF2 are ready for either direct design into finished product or as a quick wire replacement within a home or office application. The units come preprogrammed with DLP Design's Serial Interface Packet Processor (SIPP™) firmware based upon Freescale's SMAC RF IC control firmware. If the SIPP™ firmware does not meet the requirements of the project at hand, then the BDM interface is available for reprogramming the microcontroller with user firmware.

Application Areas:
- Remote control and wire replacement in industrial systems
- Wireless sensor networks
- Home automation and control
- Factory automation
- Heating and cooling systems
- Inventory management and RFID tagging
- Human interface devices
- Remote entertainment control
- Wireless toys

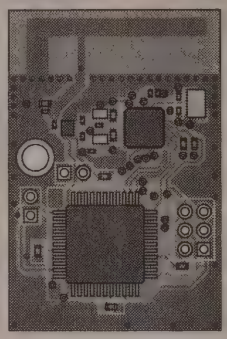
Features:
- IEEE 802.15.4 Compliant & ZigBee ready
- Freescale MC13192 RF Transceiver IC
- Freescale MC9S08GT60 Microcontroller
- Carrier-sense, multiple-access technology
- Range: >700 feet, outdoor line of sight
- Royalty-free USB drivers
- USB interface programming as easy as RS232C
- Agency approvals in place for immediate deployment in the US, Canada, and Europe
- 16 Channels (2.405GHz to 2.480GHz)
- Microcontroller pre-programmed with SIPP firmware
- <35 microamp low-power mode
- Antenna Integral to PCB Design–No External Antenna to Purchase and Mount SIPP™ firmware

DLP-RF2 - 2.4 GHZ OEM RF TRANSCEIVER MODULE

The DLP-RF2 combines a Freescale™ MC13192 2.4GHz Direct-Sequence, Spread-Spectrum RF Transceiver IC and Freescale MC9S08GT60 microcontroller to form an IEEE 802.15.4 compliant, ZigBee™ ready, short-range transceiver module. The DLP-RF2 connects to user electronics via a standard, 20-pin male header.

The MC9S08GT60 microcontroller is preprogrammed with DLP Design's Serial Interface Packet Processor (SIPP™ firmware) for accessing the transceiver functions via simple serial calls. Interface to an external serial host microcontroller/DSP/FPGA, etc. is accomplished via a simple 2-wire (RX, TX, and ground) interface.

The SIPP firmware in the DLP-RF2 resides at the application layer and is based on Freescale's SMAC. The SIPP firmware provides basic access to DLP-RF2 functionality: Packet receive and transmit, transceiver settings, EEPROM access, etc. The DLP-RF2 can also operate without a serial host controller. Basic digital I/O, A/D conversions, temperature measurement, and latching/non-latching relay control are available via the SIPP firmware. The MC9S08GT60 can be reprogrammed (if desired) with user-supplied firmware via a 6-pin BDM header that is compatible with the P&E USB-ML-12 and device programmers (purchased separately).



DLP-RF2 (TTL Serial Interface)

DLP-RF2

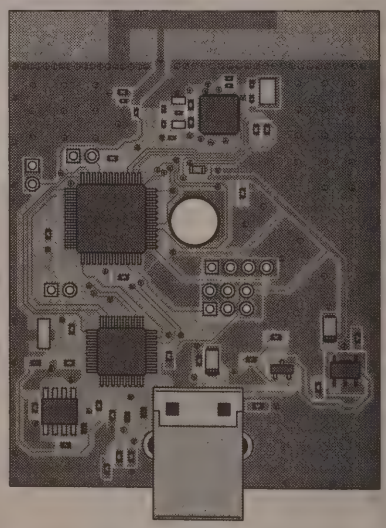
DLP-RF1 - 2.4 GHZ OEM RF USB TRANSCEIVER MODULE WITH USB INTERFACE

The DLP-RF1 combines a USB interface, Freescale™ MC13192 2.4GHz Direct-Sequence Spread Spectrum RF Transceiver IC and Freescale MC9S08GT60 microcontroller to form an IEEE 802.15.4 compliant, ZigBee™ ready, short-range transceiver module.

The MC9S08GT60 microcontroller is preprogrammed with DLP Design's Serial Interface Packet Processor (SIPP™ firmware) for accessing the transceiver functions via simple serial calls. The application programming required for accessing the module via USB is functionally identical to that used to access the RS232C ports on a standard Windows/Linux/Mac PC via the use of royalty-free Virtual COM Port (VCP) drivers. (No USB driver development is required for most applications.) The SIPP firmware in the DLP-RF1 resides at the application layer and is based on Freescale's SMAC. The SIPP firmware provides basic access to DLP-RF1 functionality: packet receive and transmit, transceiver settings, EEPROM access, etc.



DLP-RF1 (Host Interface)

DLP-RF2 Development Tools

A 20-pin interface header is provided for each of these development tools to allow quick connection to the DLP-RF2 transceiver.

The **DLP-RF2-SENS** provides example designs for a temperature/humidity sensor, door switch input, and a system for measuring battery power. This developer's tool demonstrates the low-power mode of operation in which the module remains in Sleep Mode drawing less than 40 microamps of current from two AAA batteries until either the door switch input detects a change or the timer wakes up the transceiver to check in with the system controller.

The **DLP-RF2-RELAY** also demonstrates the low-power mode of operation while providing a battery power measurement system and door switch input together with two latching relays. While in Sleep Mode, the total system current drawn from two AA batteries is less than 40 microamps regardless of the state of the relays.

The **DLP-RF2-PROTO** is intended to enable the designer to quickly progress in the development of hardware and software associated with wireless networking projects. This board offers a number of flexible tools to accommodate numerous modes of operation:

DLP-RF2 Proto Board Features:
- BDM Programming Interface
- Easy-to-Use USB Interface for Modeling Serial Host Firmware on a PC
- RS232C (DB9) Interface for Connection to a Legacy Peripheral
- Buffered LED Indication of 8 Selected Digital I/O Lines
- Low-Power Mode Jumper
- Prototyping Breadboard
- Three Power Sources: USB Port, DC Jack (4-15VDC), or 9-Volt Battery Clips
- A/D and Voltage Reference Setups

MC13192 DEVELOPER'S STARTER KIT

Freescale Semiconductor's MC13191/92 Developer's Starter Kit is a cost-effective, reusable development kit used to implement wireless network designs compatible with the IEEE® 802.15.4 standard. The kit contains all the hardware, software and documentation necessary to create proprietary and standards-based peer-to-peer and star networks.

MC13192DSK Features:

- Two 2.4 GHz wireless nodes compatible with the IEEE 802.15.4 standard
  - MC13192 2.4 GHz RF data modem
  - MC9S08GT60 low-voltage, low-power 8-bit MCU for baseband operations
    - Integrated sensors
      - MMA6261Q 1.5g X-Y-axis accelerometer
      - MMA1260D 1.5g Z-axis accelerometer
    - Printed transmit-and-receive antennae
    - Onboard expansion capabilities for external application-specific development activities
    - Onboard BDM port for MCU Flash reprogramming and in-circuit hardware debugging
    - RS-232 port for monitoring and Flash programming
    - LEDs and switches for demonstration, monitoring and control
    - Connections for nine-volt battery or external power supply
- Hardware supports Freescale's IEEE 802.15.4 MAC and example SMAC software
- Preprogrammed accelerometer demonstration and additional downloadable sample applications
- Metrowerks' CodeWarrior Development Studio for HCS08 special edition

MC13193 DEVELOPER'S KIT

Freescale Semiconductor's MC13193 Developer's Kit is a cost-effective, reusable development kit used to implement wireless network designs compatible with the IEEE® 802.15.4 standard. The kit contains all the hardware, software and documentation necessary to create proprietary and standards-based peer-to-peer and star networks.

MC13193EVB Features:

- Affordable demonstration system
- SMAC and IEEE 802.15.4 network development and ZigBee Z-Stack
- 2 Evaluation Board (EVB)
  - Based on Freescale's MC13192 and MC9S08GT60 MCU
  - Optimized antenna implementation using single printed-F antenna
  - Optional LNA to increase sensitivity
  - SMA connector for RF measurement
  - LEDs and switches for demonstration monitoring and control
  - Onboard Background Debug Module port for MCU flash reprogramming and in-circuit hardware debugging
  - RS-232 and USB port for monitoring and Flash programming
  - Range approximately 600 line-of-sight
- Power Adapters, Batteries and Cables
- USB Multilink BDM Programmer/Debugger (13193EVB-BDM-A00 only)
- Includes Metrowerks CodeWarrior™ Development Studio for HCS08 Special Edition
- SMAC Source Code and Sample Apps
- IEEE 802.15.4 Object Code and Test Tools
- ZigBee Z-Stack

MC13192 RF DAUGHTER CARD

Freescale Semiconductor offers a comprehensive, end-to-end platform solution enabled by ZigBee™ technology, beginning with the MC13192 RF data modem. The MC13192 RF modem daughter card is a low-cost development board that provides a simple interface to Freescale's MC13192 transceiver.

MC13192RFC Features:

- Compliant with the IEEE 802.15.4 standard and ZigBee technology-ready
- Operates in the 2.4 GHz frequency band
- Comprehensive transceiver data modem with fully packetized data out
- Low number of external components. Includes on-chip low-noise amplifier, 1.0 mW power amplifier, voltage controlled oscillator, full spread-spectrum encoding and decoding compatible with the IEEE 802.15.4 standard
- Engineered to support 250 Kbps O-QPSK data in 2.0 MHz channels, per the IEEE 802.15.4 specification
- Sixteen dynamically selectable channels
- Low power consumption
- Multiple power-down modes enabling standard alkaline battery lifetimes from months to years
- Power supply range: 2.0V to 3.4V operating voltage with on-chip regulator
- Data and control interface via standard serial peripheral interface (SPI)
- Programmable clock output that can be used by MCU
- Extended temperature operation range: -40°C to +85°C
- 5 mm x 5 mm QFN-32 Pb-free package ZigBee Technology

MC13193 EVALUATION KIT

The 13193-EVK is Freescale Semiconductor's latest addition of hardware tools for the ZigBee™-compliant platform. The 13193-EVK builds on the success of the 13192 Developer's Starter Kit (13192DSK-A00), by adding full ZigBee capabilities for demonstration and development. This scalable solution provides wireless network functionality from simple proprietary applications through robust ZigBee applications. The kits contains all the necessary hardware and software to demonstrate and develop solutions based on Freescale's MC13191 and Simple MAC software for proprietary applications, the MC13192 for IEEE® 802.15.4 compliant applications and the MC13193 for ZigBee-compliant applications. Users can demonstrate and develop wireless solutions that support simple point-to-point, star and complex mesh networks.

MC13193EVK Features:

- Five 2.4GHz wireless nodes based on the Freescale ZigBee-compliant platform
- 802.15.4 packet sniffer
- Provides reference designs from IC to antenna
- Onboard BDM port for MCU flash reprogramming and in-circuit hardware debugging
- RS-232 port for monitoring and Flash programming
- LEDs and switches for demonstration, monitoring and control
- Connections for 9-Volt battery or external power supply (included in kit)
- SMAC, 802.15.4 and ZigBee compatible
- Includes Metrowerks CodeWarrior Development Studio for HCS08
- ZigBee protocol stack, sample applications and utilities

RABBIT Wireless Application Kits

BLUETOOTH RADIO MODULE APPLICATION KIT

Bluetooth Application Kit The Bluetooth Application Kit provides all of the hardware and software necessary to develop a Bluetooth application. The Application Kit includes an RCM3100, EmbeddedBlue eb506-AHC-IN Bluetooth Radio Module, prototyping board, and miscellaneous cables and hardware. The Application Kit also includes the Dynamic C Integrated Development Environment, Bluetooth drivers, libraries, sample programs, and manuals.

Features and Benefits :

- Bluetooth radio modules plug directly into supported RCMs and SBCs
- Simple serial UART communications and control
- Seamless connectivity with any Bluetooth device
- 2.4 GHz FHSS (Frequency Hopping Spread Spectrum) technology ensures high reliability and is robust to interference
- Low current consumption for long battery life
- Complete with sample applications and source code
- Internal Surface-mount antenna.

Features	EmbeddedBlue eb506-ACH-IN
Transmit Power	4dBm (max) class 2 operation
Open Field Range	More than 50 meters (164 feet)
Receiver Sensitivity	-85dBm
Operating Temperature	0° to 70° C
Supply Power	3.3 VDC
Interfaces	3.3 V logic level UART Baud rate: 9.6 k – 230.4 k
Connectors	Two 17-pin 2 mm headers
Antenna	Internal surface mount
Bluetooth Support	Version 1.2 compliant (L2CAP, RFCOMM, SDP, SPP)
Firmware	Upgradeable via PC application

694—101-1040		Bluetooth Application Kit	339.00

WI-FI (802.11B) APPLICATION KIT

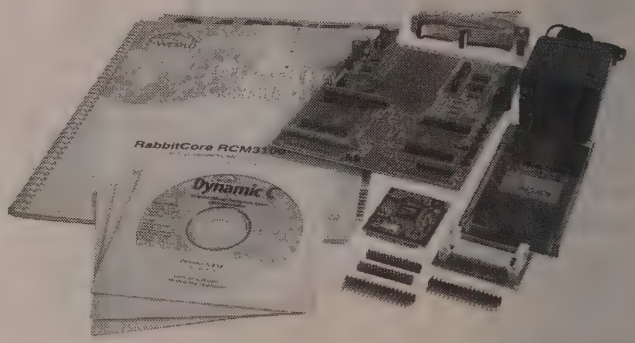
Integrating Wi-Fi (IEEE 802.11b) with a RabbitCore™ Development Kit, embedded system integrators can now enable a wireless embedded system. Wireless connectivity eliminates Ethernet cables allowing for greater flexibility and mobility of wireless embedded Networks.

Z-World's Wi-Fi Applications Kit provides all the tools necessary to sample and design communications from a Rabbit-based device to a WiFi-enabled device (i.e. PC Laptop or any device using a Compact Flash based Wi-Fi card). The libraries and sample programs allow for a Wi-Fi card to send and receive data to/from a RabbitCore module (RCM) over a wireless connection. The RCM can also send/receive email from any PC or device with a compatible Wi-Fi card. The Wi-Fi Applications Kit includes Z-World's Dynamic C software with royalty-free TCP/IP stack.

Features and Benefits :

- Kit developed w/ LinkSys WCF12 Wi-Fi Card
- Other compatible WI-Fi cards are Sandisk, Netgear, SMC, and D-Link
- Seamless connectivity with any Bluetooth device
- 2.4 GHz FHSS (Frequency Hopping Spread Spectrum) technology ensures high reliability and is robust to interference
- Low current consumption for long battery life
- Complete with sample applications and source code
- Internal Surface-mount antenna.

Features	Wi-Fi Application Kit
Microprocessor Core Module	RCM3100 RabbitCore module @ 29.4 MHz
Prototyping Board	Standard RCM3100 Prototyping Board
Serial Ports	RS-232 (2 3-wire or 1 5-wire). Additional CMOS ports available on RCM3100
Protocol	IEEE 802.11b (Wi-Fi) 11Mbps, 2.4 GHz
Compact Flash Connector	Type 1 Compact Flash Adapter: I/O CF based 802.11b Dual 2 x 17, 0.1" pitch socket strip
Software Compiler	Dynamic C with TCP/IP stack



MOUSER STOCK NO. Mfr.	Mfr. Part No.	Description	Price Each
694—101-0911		Wi-Fi (802.11b) Application Kit	599.00

694—101-0998		Wi-Fi add on Kit for RCM3400	199.00
694—101-0999		Wi-Fi add on Kit for RCM3600-3700	199.00
694—101-1000		Wi-Fi add on Kit for PowerCore Flex	199.00

GPRS/GSM APPLICATION KIT

Cell phones are not the only devices that can communicate in a GSM network –a Rabbit-based control device is also on the list. Imagine your machines notifying you when they need servicing change settings from anywhere in the world upload data wirelessly send commands from one machine to another receive vehicle location/conditions via e-mail.

Z-World's GPRS/GSM Application Kit provides all the tools necessary to sample and develop applications that combine a Rabbit-based control device with a GSM/GPRS modem. The libraries and sample programs allow for a device connected to the cellular network to send SMS (text) messages to a RabbitCore module (RCM) that can interpret messages as commands and in turn execute control functions. The RCM can also send/receive GPRS e-mail wirelessly to/from any PC, GSM device, or cell phone. The LCD/keypad module included in the GPRS/GSM Application Kit incorporates a menu system that provides for an easy interface to read or send text messages and e-mail.

Features and Benefits :

- Hardware/Software for wireless RCM communication and control via GPRS/GSM.
- EnforaTM Spider SA-GL Quad Band wireless modem and antenna.
- GUI and Keypad configuration menu system.
- Royalty-free TCP/IP stack in source code.
- Sample programs/libraries for generic modem operation.
- Fully integrated development software: compiler, editor, and debugger for control applications.

Features	GPRS/GSM Application Kit
Microprocessor Core Module	RCM3100 RabbitCore module @29.4MHz
Prototyping Board	Standard RCM3100 Prototyping Board
Serial Ports	6 CMOS-compatible ports available on RCM3100
Display	122 x 32 Keypad/Display Unit with LCD menu system
GSM Modem	Enfora Spider SA-GL Quad Band GSM/GPRS modem
Antenna	1/2 Wave Device R/A Antenna. (1850-1990 MHz)
SIM Card (Sold separately)	Available through wireless service provider or AIRDESK
Software Compiler	Dynamic CTM with TCP/IP stack
Software Libraries	GPRS/SMS modes, Modem-specific Library
Additional Libraries	Dynamic C PPP module, Generic Modem Library
Sample Programs	For SMS and GPRS communications and control. FTP datalogging,TCP/IP, SMTP, POP3, Telnet
Menuing System	For display of SMS and GPRS communications
Power Supplies	12VDC adapter for RCM3100, 5V DC for Enfora Modem

RADIOTRONIX Embedded Wireless Modules

Radiotronix

Radiotronix innovates, manufactures, and markets embedded wireless modules for the burgeoning low-data rate, low-power wireless market space. Radiotronix products are designed to be complete wireless solutions in IC-style packaging that make it fast and easy for any engineer to embed wireless connectivity in any product.

WI232 MODULES - WIRELESS UART TO UART SOLUTION

Features:
- Small Size - .8" x .935 x .08"
- PHY and MAC layer protocol built in
- CSMA medium access control
- Channel quality of service indicator
- 114 dB link budget in DTS mode
- 5 volt tolerant I/O
- Data encryption / encoding for PGP
- 16 bit CRC data checking
- True UART to RF solution
- Range up to 1500 ft. LOS
- Data Rate: 152.34 kbit/sec.

Applications:
Automated Meter Reading, RFID, Home Automation, Wireless Security Systems, Industrial

Embedded RF Modules

The WI232DTS module combines a state-of-the art, low power wireless transceiver with a multipoint-to-multipoint protocol controller to form a wireless communication solution, capable of replacing wires in any RS-232/422/485 application. The module is designed to need no special addressing or formatting of data.

For quantities of 500 and up, call for quote.

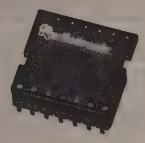
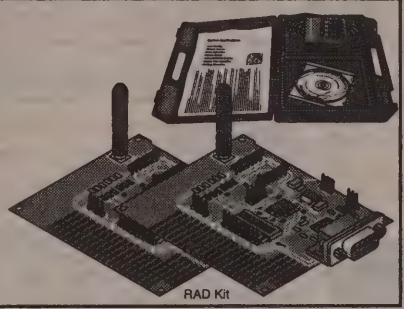
RAD Kit

EWD-900-HDTC MODULE (868/915 MHZ)

Data



EWD-900-HDTC Module



RAD Kit

Applications:
Automatic Meter Reading, Wireless Lighting, Industrial Automation, RFID, Home Automation

Features:
- 32-bit Unique ID
- High Performance - Low Cost
- Low Power Consumption
- Small Size - .7"x.7"x.20"
- Quick Time-to Market
- Data Rate: 76.8 kbit/sec.

EWD-900-HDTC (Half Duplex Data Transceiver) Module
The EWD-900-HDTC is an embedded wireless module for unlicensed operation in the United States and around the world. The EWD-900-HDTC is a fully integrated half duplex wireless FSK data transceiver is suitable for the United States (902-928MHz) or United Kingdom (868MHz). The basic design of the transceiver can be scaled from 300MHz to 1GHz, allowing operation in countries around the world.
. The transceiver contains built-in data encoding and decoding, simplifying the interface and software of the host microcontroller. It can send and receive data using either Manchester encoding or un-encoded from a UART.

RK-900-HDTC RAD (Rapid Development) Kit
The RAD (Rapid Development) Kit contains 2 RAD boards, 4 EWD-900-HDT modules, 2 serial cables, 2 wall transformers and documentary/software CD. The RAD board can function as a wireless modem for transparent wireless communication between two PC's. It can also operate in evaluation mode to support range testing. Kit comes programmed with firmware that allows the boards to be operated in two different modes: Program Mode and Wireless Link Mode.

For quantities of 25 and up, call for quote.

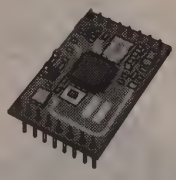
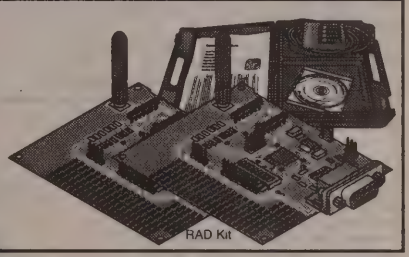
EWM-900-FDTC MODULE (902-928 MHZ)

Audio/Data



EWM-900-FDTC Module



RAD Kit

EWM-900-FDTC (Full Duplex Audio/Data Transceiver) Modules
The EWM-900-FDTC is the first modular RF product in the world to completely encapsulate a 900 MHz full-duplex audio/data transceiver into a single hybrid component. These revolutionary embedded wireless modules™ allow any engineer to design wireless products. The only external RF component required is an antenna. No production tuning adjustments are required. No RF experience or special test equipment is needed.

EWM-900-FDTC RAD (Rapid Development) Kit
The RAD kit contains 2 RAD boards,
2 EWM-900-FDTC-BS module, 2 EWM-900-FDTC-HS module, (4) AAA batteries, and documentation/ software CD. This kit is battery powered and can be used for stand-alone development or with a laptop for development and range testing. Special software allows the designer to manipulate the control register bits, perform BER testing, and monitor local and remote RSSI levels.

Applications:
Wireless Headsets, Wireless Intercoms, Industrial Automation, Wireless Microphones

Features:
- Extended Range - Up to 1,000 Feet
- Small Size - 1.22"x.83"x.4"
- High Performance - Low Cost
- Point to Multi-point
- Low Power Consumption

For quantities of 25 and up, call for quote.

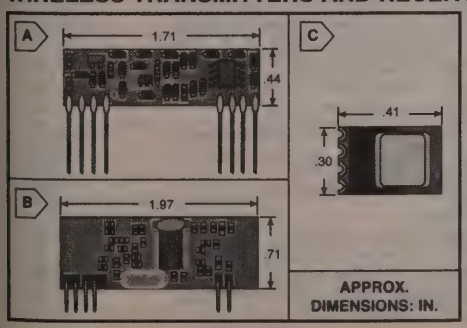
WIRELESS TRANSMITTERS AND RECEIVERS



Radiotronix RF transmitter and receiver modules offer a cost effective, high-performance solution for remote control type applications and are ideal for remote control applications where low-cost and longer range are required.

Features:
- Very Small Package
- Low Cost
- Long Range
- Minimal RF Experience needed

Applications:
Keyless Entry, Remote Control, Wireless Sensors, Gaming, RFID

For quantities of 100 and up, call for quote.

Z-WORLD Single Board Computers

BL2500 COYOTE

Gives OEM designers extremely low-cost embedded control for high-volume applications such as product control, factory equipment control, access control, HVAC, and vending machines. Two standard models—one with Ethernet, one without—feature the Rabbit 3000™ microprocessor at 29.4 MHz, with 256K Flash and 128K SRAM.

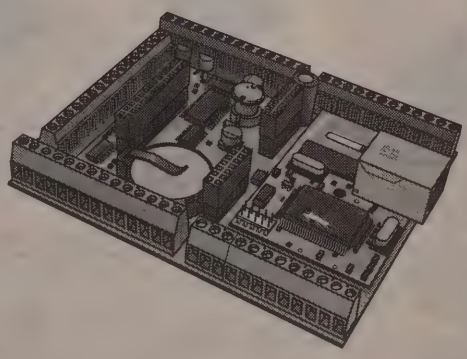
Specifications:

Feature	BL2500	BL2510
Microprocessor	Rabbit 3000™ at 29.4 MHz	
Ethernet Port	10Base-T, RJ-45	N/A
Flash Memory	256K (standard)	
SRAM	128K (standard)	
LED's	4-User-programmable	
Digital Inputs	16: 15 protected to ±36 VDC, 1 protected to +5 –36V; threshold is 1.5 V nom.	
Digital Outputs	8, sink up to 200 mA each, 36 V DC max. standoff voltage	
Analog Inputs	One 10-bit resolution, 8-bit accuracy, input range 0.1–3.1 V, 10 samples/s	
Analog Outputs	Two 9-bit PWM, 0.1–3.1 VDC, 17ms settling time	
Serial Ports	6 serial ports: 1 RS-485, 2 RS-232 or one RS-232 (with CTS/RTS), 1 CMOS level asynchronous or clocked serial port, 1 expansion serial port multiplexed to two RS-422 clocked SPI ports, 1 CMOS compatible serial port for programming/debug	
Serial Rate	Max. async = CLK/8, Max. sync = CLK/2	
Real-Time Clock	Yes	
Timers	Ten 8-bit timers (6 cascadable from the first) and one 10-bit timer with 2 match registers	
Watchdog/Supervisor	Yes	
Power	8 – 40 V DC 1 W typical w/ no load	8 – 40 V DC 0.8 W typical w/ no load
Backup Battery	3 V lithium coin-type, 1000 mA•h, supports RTC & SRAM	
Operating Temperature	–40° to +70°C	
Humidity	5 – 95%, noncondensing	
Connectors	5 polarized 9-pin Molex® type terminals with 0.1" pitch, Two 4-pin 0.156" pitch Molex type, two 0.156" pitch 2-pin Molex type, two RJ-45, one 0.1" pitch 2x5 IDC, one 2 mm pitch 2x5 IDC programming port	
Board Size	3.95" x 3.95" x 1.16" (100 x 100 x 29 mm)	3.95" x 3.95" x 0.80" (100 x 100 x 20 mm)

BL2100 SMARTCAT

Designed for medium-scale control and monitoring applications, the Smartcat is a high-performance single-board computer that gives OEM designers Ethernet and keypad/display options all in one low-cost package. The Smartcat offers plenty of sinking/sourcing digital I/O with A/D and D/A, providing comprehensive integrated control capabilities in a compact 4.14" x 3.41" (105 x 87 mm) form factor. Ethernet models are ideal for remotely monitoring and supervising another programmable system or web-enabling new or existing products. The Ethernet interface is fully supported by software to enable network and Internet connectivity.



Specifications:

*13–36 V DC supply voltage required

Feature	BL2100	BL2110	BL2120	BL2130
Microprocessor	Rabbit 2000™ @ 22.1 MHz			
Ethernet Port	10Base-T, RJ-45, link and activity LEDs		None

Z-WORLD Single Board Computers

BL2000 WILDCAT

The Wildcat gives OEM designers optional Ethernet connectivity in a low-cost, high-performance single-board computer. These compact boards are rich with the digital I/O, A/D, and D/A designers need for embedded control and monitoring applications, and the Wildcat's compact board size of 4.15" x 3.43" (105 x 87 mm) allows for easy integration. Ethernet models are ideal for remotely monitoring and supervising another programmable system or web-enabling new or existing products.

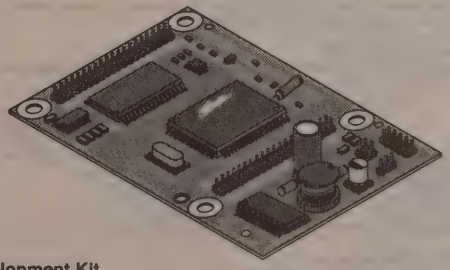
Keypad/Display	See our "OP" products for serial display options			
Digital Inputs	11: protected to ±36 VDC			
Digital Outputs	8: sink 200 mA, 2: sink 750 mA, 40 VDC max.			
Analog Inputs	Four 12-bit resolution 1 MW, ±10 VDC, up to 4,000 samples/sec.	Four 10-bit resolution 1 MW, ±10 VDC, up to 4,000 samples/sec.	Four 12-bit resolution 1 MW, ±10 VDC, up to 4,000 samples/sec.	Four 10-bit resolution 1 MW, ±10 VDC, up to 4,000 samples/sec.
Analog Outputs	Two 12-bit resolution, 0–4 VDC, update rate 12 kHz	None	Two 12-bit resolution, 0–4 VDC, update rate 12 kHz	None
Dual Purpose Analog or Digital Inputs	5 at 12 kW, 12-bit resolution, 0–48 VDC	7 at 12 kW, 10-bit resolution, 0–48 VDC	5 at 12 kW, 12-bit resolution, 0–48 VDC	7 at 12 kW, 10-bit resolution, 0–48 VDC
Relay Outputs	SPDT, 1 A @ 30 VDC, 0.3 A @ 120 VAC Uses 1 digital output			
Serial Ports	4 total: two 3-wire (or one 5-wire) RS-232, 1 RS-485, and one 5 V CMOS-compatible (programming)			
Serial Rate	Max. burst rate = CLK/32 Max. sustained rate = burst/2			
Connectors	Screw terminals support max. 14 AWG/1.5 mm2			
Real-Time Clock	Yes			
Timers	Five 8-bit timers (four cascadable from the first) and one 10-bit timer with 2 match registers			
Watchdog/Supervisor	Yes			
Power	9–40 VDC or 24 VAC ±10%, 1.5 W max., power jack			
Operating Temp	–40°C to 70°C			
Humidity	5–95%, non-condensing			
Board Size	3.43" x 4.15" x 0.82" (87 x 105 x 21 mm)			
Enclosure Size	4.9" x 5.6" x 1.1" (124 x 142 x 28 mm)			
LED's	8 total: Power On, Microprocessor Error, Ethernet Link, Ethernet Activity, 4 output status		6 total: Power On, Microprocessor Error, 4 output status	

BL1800 JACKRABBIT

The Jackrabbit is Z-World's most compact and lowest cost C-programmable single-board computer. The Jackrabbit is the perfect solution for applications that have significant cost and size constraints but need a dependable SBC. Fast number crunching is provided by a Rabbit 2000 microprocessor operating at up to 29.5 MHz.



Specifications:

Feature	BL1800	BL1810	BL1820
Microprocessor	Rabbit 2000 @ 29.5 MHz	Rabbit 2000 @ 14.7 MHz	
Flash	256K	128K	
SRAM	128K		
Backup Battery	3 V lithium coin-type, 950 mA·h, supports RTC and SRAM		None
Keypad/Display	See our "OP" products for serial display options		
Digital Inputs	6 CMOS-compatible		7 CMOS-compatible
Digital Outputs	8 total: 4 CMOS-compatible, 3 sink up to 1 amp each, 1 sources up to 0.5 amps, 30 VDC max.	8 total: 4 CMOS-compatible, 3 sink up to 200 mA each, 1 sources up to 100 mA, 30 VDC max.	9 total: 5 CMOS-compatible, 3 sink up to 200 mA each, 1 sources up to 100 mA, 30 VDC max.
Configurable I/O	14 total CMOS-compatible: 8 bytewide and 6 by bit		15 total CMOS-compatible: 8 bytewide and 7 by bit
Analog Inputs	One 9-bit resolution, 8-bit accuracy, 0.1–2.8 V input range, 10 samples/sec.		
Analog Outputs	Two 9-bit PWM, one 0.1–2.8 VDC, one 0.7–3.5 VDC, update rate 50 Hz		
Serial Ports	4 total: two 3-wire (or one 5-wire) RS-232, one RS-485, and one 5 V CMOS-compatible (programming). 2 configurable as sync.		4 total: two 3-wire (or one 5-wire) RS-232 and two 5 V CMOS-compatible (1 programming). 2 configurable as sync.
Serial Rate	Max. burst rate = CLK/32 (async) Max. sustained rate = burst/2		
Connectors	Two 2 x 20, 2 mm IDC headers		
Real-Time Clock	Yes		
Timers	Five 8-bit timers (four cascadable from the first) and one 10-bit timer with 2 match registers		
Watchdog/Supervisor	Yes		
Power	8–40 VDC, 1.2 W max.	7.5–25 VDC, 100 mA	
Operating Temp	–40°C to +70°C		
Humidity	5–95%, non-condensing		
Board Size	3.50" x 2.50" x 0.94" (89 x 64 x 24 mm)

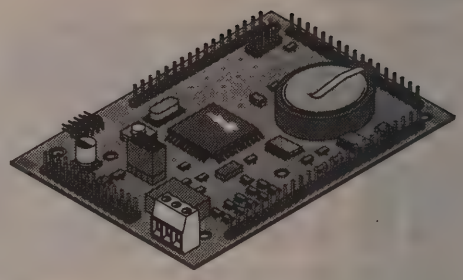
Z-WORLD Single Board Computers

LP3500 FOX

The LP3500 Fox is a low-power single-board computer designed to operate reliably virtually any place it is deployed, especially where power is limited, such as in portable, hand-held, battery-powered, and remote monitoring systems. The LP3500 features built-in analog and digital I/O and consumes less than 20 mA when fully operational and less than 100 µA in power-save mode.



Specifications:

Feature	LP3500	LP3510
Microprocessor	Low-EMI Rabbit 3000™ at up to 7.4 MHz	
Flash	512K (2 x 256K)	256K
SRAM	512K (2 x 256K)	128K
Backup Battery	Socketed 3 V lithium coin-type, 265 mA·h, supports RTC and SRAM	
Keypad/Display	Optional keypad/display module with 7 keys and 122 _ 32 graphic display, easy to use menuing software	
Digital Inputs	16 protected to ±36 V DC	
Digital Outputs	10 total: 8 sink and 2 source 200 mA each, 36 V DC max.	
Relay	1 SPDT, 1 A, 30 V DC, bi-stable	None
Analog Inputs	Eight 11-bit single-ended or four 12-bit differential, 1MW input impedance, up to 200 samples/sec. Multiple software-controlled programmable gain voltage ranges from 0-1 V to 0-20 V. 4 channels can be set individually for 4-20mA with plug-in jumpers 1 channel has software-selectable power voltage monitoring option	None
Analog Outputs	Unfiltered PWM, 1 kW output impedance	None
Serial Ports	6 total: 1 RS-485 3 RS-232 (three 3-wire OR one 5-wire and one 3-wire 1 logic level serial interface for optional add-ons 1 3 V CMOS-compatible(programming)	
Serial Rate	Max. asynchronous baud rate = CLK/8	
Real-Time Clock	Yes	
Timers	Ten 8-bit timers (6 cascadable from the first) and one 10-bit timer with 2 match registers	
Watchdog/Supervisor	Yes	
Main Power	3–30 V DC, 20 mA max. @ 7.4 MHz, 100 µA max. @ 2 kHz	
Backup Power	Used to reduce current in power-save mode, 2.7–3.3 V @ 100µA max	
Operating Temp	–40° to +70°C	
Humidity	5–95%, noncondensing	
I/O Connectors	Two 1 _ 17, 0.1" pitch headers	
Board Size	3.65" _ 2.60" _ 0.45" (93 x 66 x 11 mm)

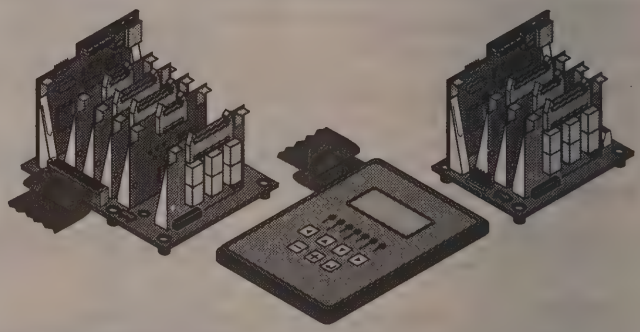
SR9000 SMART START SYSTEM

The Smart Star is a modular and expandable embedded control system designed for demanding real-time control and data acquisition applications. Multiple I/O card options--including digital, A/D, D/A, and relays--allow users to closely match their specific I/O needs. The Smart Star CPU card comes in both Ethernet and non-Ethernet versions, and a cost-effective keypad/display is also available.



Ethernet connectivity - CPU card with or without Ethernet
Flexible functionality - modular configuration to easily interchange or replace individual I/O cards
Multiple I/O card options - digital I/O, A/D, D/A, relay
Expandable - up to 168 I/O
Cost-effective - low cost per I/O
Optional keyboard/display - backlit 122 x 32 pixel graphic LCD with 7 user-relegendable keys, 7 LEDs

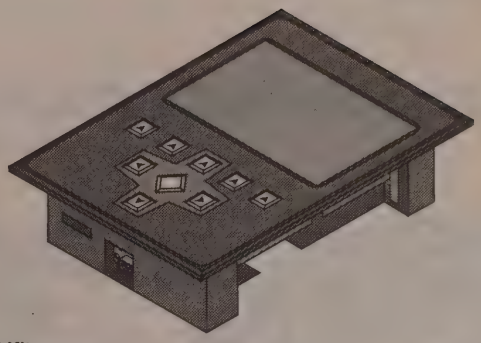
OP7200 EDISPLAY

The OP7200 eDisplay is an intelligent operator interface that offers rugged I/O, built-in Ethernet connectivity, and optional A/D and touchscreen capabilities. The compact eDisplay is an ideal data acquisition and display device for OEM products and stand-alone systems such as factory floor controls. The unit's 10Base-T Ethernet facilitates remote diagnostics, control, and communication, including sending and receiving E-mails and alerts.



Specifications:

Feature	OP7200	OP7210
Microprocessor	Rabbit 2000™ at 22.1 MHz	
Ethernet Port	10Base-T, RJ-45	
Flash	256K	
SRAM	128K	
Backup Battery	Socketed 3 V lithium coin-type, 265 mA·h, supports RTC and SRAM, connection for user-supplied external battery	
Keypad/Display	1/4 VGA (320 _ 240 pixels) with programmable on/off white LED backlight, 9-key tactile feedback keypad	
	4096 x 4096 analog touchscreen	No touchscreen
LEDs	4: Power On, Microprocessor Error, Ethernet Link Alive, Ethernet Activity	
Digital Inputs	19 protected to ±36 VDC	16 protected to ±36 VDC
Digital Outputs	8: individually configurable in software; sink up to 350 mA, source up to 250 mA, or tri-state; 40 VDC max.	
Analog Inputs	Eight 11-bit single-ended or four 12-bit differential, 200 kW input impedance, 2.5 ksamples/sec. Eight software-controlled programmable gain/voltage ranges from 0–1 V to 0–20 V.	None
Serial Ports	4 CMOS-compatible: 1 RS-485 (or I/O expansion port), 2 RS-232 (one 5-wire or two 3-wire), One 5V CMOS-compatible (programmable)	
Serial Rate	Max. burst rate = CLK/32, Max. sustained rate = CLK/64	
Real-Time Clock	Yes	
Timers	Five 8-bit timers (4 cascadable from the first) and one 10-bit timer with 2 match registers	
Watchdog/Supervisor	Yes	
Power	9–40 VDC or 24 VAC, 4 W max.	
Operating Temp	–10° to +65°C	
Humidity	20–70%, noncondensing	
I/O Connectors	Screw terminals support max. 14 AWG/1.5 mm2 (standard)	
Product Size	5.67" x 4.41" x 1.70" (144 x 112 x 43 mm)	
Display Area	3.0" x 2.2" (76 x 56 mm)

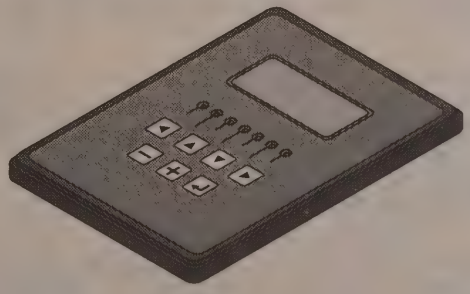
OP6800 MINICOM

The MiniCom is a low-cost, C-programmable operator interface and single-board computer that offers Ethernet connectivity, plenty of industrialized I/O, a graphic LCD, and keypad. The MiniCom's compact 4.5" x 3.6" (112 x 91 mm) form factor makes it ideal for use in designs and areas with size constraints. Available in both Ethernet-enabled and non-Ethernet versions, the MiniCom provides comprehensive integrated control, display, and networking capabilities via Internet/Ethernet or serial communications.



Specifications:

Feature	OP6800	OP6810
Microprocessor	Rabbit 2000 at 22.1 MHz	
Ethernet Port	10Base-T, RJ-45	None
Flash	256K	128K
SRAM	128K	128K
Backup Battery	Connection for user-supplied battery (to support RTC and SRAM)	
Keypad/Display	122 x 32 pixel graphic LCD in two stacked sections (with programmable backlight), user-relegendable keypad with 7-key / 7-LED interface	
LEDs	7 hardware- or software-driven: 1 red, 4 green, 2 yellow	
Digital Inputs	13 total: 8 protected to ±36 VDC, 5 protected to ±25 VDC	
Digital Outputs	11 total: sink 200 mA, 40 VDC max., 4 with built-in inductive load-protection diode	
Serial Ports	4 total: two 3-wire or one 5-wire RS-232, 1 RS-485, and one 5 V CMOS-compatible (programming)	
Serial Rate	Max. burst rate = CLK/32 Max. sustained rate = burst/2	
Connectors	2 x 20, 0.1" pitch ribbon-cable header	
Real-Time Clock	Yes	
Timers	Five 8-bit timers (four cascadable from the first) and one 10-bit timer with 2 match registers	
Watchdog/Supervisor	Yes	
Power	9–36 VDC, 1.5 W max.	
Operating Temp	0–50°C	
Humidity	5–95%, non-condensing	
Product Size	4.5" x 3.6" x 1.33" (112 x 91 x 33 mm)

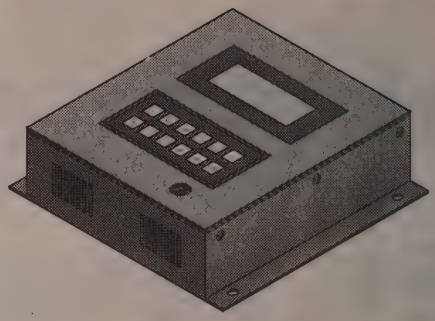
Z-WORLD Single Board Computers

OP6700 INTELLICOM

The Intellicom is a C-programmable, 12-key graphic display with Ethernet for network connectivity and a VFD option for applications requiring high visibility. To accommodate users' installation preferences, the versatile Intellicom can be either wall or panel mounted.



Specifications:

Feature	OP6700	OP6600
Microprocessor	Rabbit 2000 at 18.432 MHz	
Ethernet Port	10Base-T, RJ-45	None
Flash	512K (2 x 256)	256K
SRAM	128K	
Backup Battery	Socketed board with 3 V lithium coin-type, 1,000 mA-h, supports RTC and SRAM	
Keypad/Display	2 x 6 domed tactile keypad with customizable legend, supertwist 4 x 20 LCD with backlighting	
Digital Inputs	4 protected to ±36 VDC	
Digital Outputs	4 sink 200 mA, 40 VDC max.	
Speaker Outputs	Software-adjustable frequency and volume	
Serial Ports	3 total: one 5 V CMOS-compatible (programming) and either two 3-wire RS-232, one 3-wire RS-232 and one RS-485, or one 5-wire RS-232	
Serial Rate	Max. burst rate = CLK/32 Max. sustained rate = burst/2	
Connectors	Screw terminals	
Real-Time Clock	Yes	
Timers	Five 8-bit timers (four cascadable from the first) and one 10-bit timer with 2 match registers	
Watchdog/Supervisor	Yes	
Power	9–40 VDC, 2.4 W (backlighting on)	
Operating Temp	0–50°C	
Humidity	5–95%, non-condensing	
Board Size	4.7" x 4.3" x 0.8" (119 x 109 x 20 mm)	
Enclosure	6.7" x 5.7" x 2.0" (170 x 145 x 51 mm)

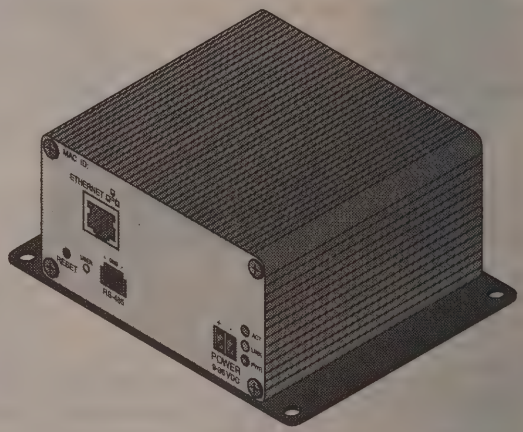
EM1500 SERIAL-ETHERNET BRIDGE

The EM1500 Serial-Ethernet Bridge is a device that converts multi-point serial communications to a TCP/IP network. The EM1500 connects to and network enables as many as 4 RS-232 serial devices simultaneously, while also acting as master on a multi-drop RS-485 network. In addition, the EM1500 provides an SPDT relay, 2 digital open collector outputs and 3 digital inputs suitable for interfacing to mechanical switches or logic level circuits.

Success in today's marketplace demands rapid, low-cost access to information. The EM1500 is designed to allow easy setup and monitoring via a "black box" approach. No programming is needed. The tight integration of hardware and software offers unparalleled reliability. Quick configuration over Ethernet, using a web browser or the stand-alone GUI configuration program, is easy and convenient.

The EM1500 interfaces with all types of serial devices: modems, sensors, card readers, bar scanners, printers, etc. Having 2 EM1500s allows the creation of a transparent serial bridge, thereby using some of the more advanced software features, such as packaging and protocol conversions.



Hardware Features:
- 10/100Base-T Ethernet
- 4 Serial Ports
- Guaranteed throughput 600 Kpbs (subject to network throughput)
- Serial ports 3 & 4 are either independent RS-232 ports up to 120 Kbps or TTL
- RS-485 up to 230.4 Kbps
- Easily interface legacy serial devices to Ethernet
- Extend the communication distance between 2 serial devices
- Metal enclosure for industrial applications

Software Features:
- Web browser interface for remote configuration
- GUI for easy configuration and monitoring
- Secure remote configuration
- AT command set emulation

Specifications:

Feature	EM1500
Microprocessor	Rabbit 3000 at 44.2 MHz
Ethernet	10/100Base-T, RJ-45
Flash	512K/256K data
SRAM	512K program execution
Backup Battery	3 V lithium coin type, 950 mAh
Relay	SPDT, 1 A @ 30 VDC, 0.3 A @ 120 VAC
Digital Inputs	3 protected to ± 36 V
Digital Outputs	2 sinking up to 750 mA, > -0.5V; < (Vin + 0.5V).
Serial Ports	1 DTE RS-232, 1 DCE RS-232, 1 RS-485 half duplex, 1 or 2 configurable serial port(s): Two 3-wire, One 5-wire, or one 9-wire (TTL only)
Serial Rate	75-230.4 Kpbs, 7/8 data bits, N/O/E/M/S parity, 1 stop, min thru-put: 600 Kbps
Serial buffer	1020 bytes
Configuration GUI	Supports WIN32, x86 Linux
Flow Control (RS-232)	None, XON/XOFF, RTS/CTS, DTR/DSR, DCD set independently for each directions (Tx, Rx)
Protocols	TCP/IP, telnet, RFC2217, DHCP, ARP, ICMP, DNS
LEDs	4: PWR (red), ACT (yellow), LINK (green), USER (red and green)
Power	9-36 VDC @ 1.5 W max
Operating Temp	–40°C to +70°C
Humidity	5–95%, noncondensing
Connectors	2 DB9 (1 male, 1 female), 1: 1x9 IDC, 0.1" pitch header, 1: 1x3 IDC, 0.1" pitch header 1: 2x5 IDC, 0.1" pitch header, RJ – 45, 1: 2 Position screw terminal
Enclosure Size	3.56" x 4.18 " x 1.72" (90 x 106 x 44 mm)

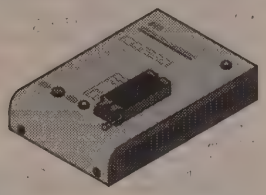
BK PRECISION PROGRAMMERS

Each programmer has been designed for ease-of-use and reliable performance. Whether you are working with PLCC, SOIC, TSOP, DIP, TQFP, SSOP, PSOP or QFP, B+K Precision has an extensive line of socket adapters to interface with any IC package. These programmers are a must for anyone that tests, repairs, or programs any electronic device that uses a memory IC. Fast and reliable, you can depend upon B+K Precision programmers.

Device Programmer

Features:

- EPROM, EEPROM, Flash, NVRAM and serial EEPROM capability
- Low cost
- 32 pin DIL ZIF (Zero Insertion Force) socket accepts both 300/600 mil devices up to 32 pin
- Parallel printer port interface
- Easy to use control program, DOS and Windows 95/98/Me/NT/2000/XP compatible
- One year warranty



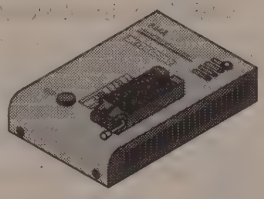
B&K Part Number 848

615-848	EEPROM Programmer, Single Socket	$249.00

Device Programmer

Features:

- Small, fast and powerful programmer
- 40 pin DIL ZIF (Zero Insertion Force) socket accepts both 300/600 mil devices up to 40 pins
- In-circuit serial programming (ISP) capability included
- High-speed IEEE 1284 printer-port interface, up to 1MB/sec. transfer rate
- Easy to use control program, DOS and Windows 95/98/Me/NT/2000/XP compatible
- One year warranty



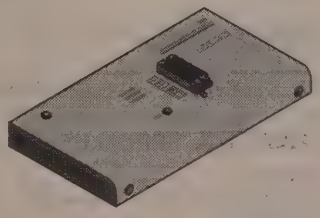
B&K Part Number 844A

615-844A	Device Programmer (Windows software included)	$420.00

Universal Device Programmer

Features:

- Fast and accurate programming
- 48 pin DIL ZIF (Zero Insertion Force) socket accepts both 300/600 mil devices up to 48 pin
- 48 pin ZIF socket, no adapter required for any DIP device up to 48 pins
- Parallel printer port interface
- Windows 95/98/Me/NT/2000 compatible
- One year warranty



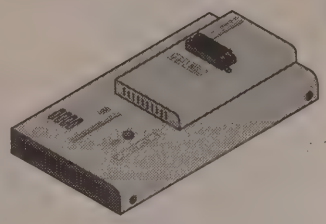
B&K Part Number 864

615-864	Universal Programmer	$695.00

Universal Device Programmer

Features:

- Fast and accurate programming
- 48 pin DIL ZIF (Zero Insertion Force) socket accepts both 300/600 mil devices up to 48 pins
- 48 pin ZIF socket, no adapter required for any DIP device up to 48 pins
- Parallel printer port interface
- Windows 95/98/Me/NT/2000/XP compatible
- One year warranty



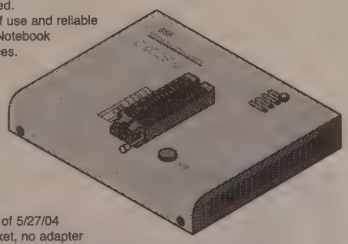
B&K Part Number 865

615-865	Universal Programmer (Windows based software included)	$995.00

Universal Device Programmer with USB Interface

Features:

- The 866 is a universal device programmer with an extensive device library that is constantly updated.
- This programmer has been designed for ease of use and reliable performance and it is ideal for use with Laptop/Notebook computers that do not have parallel port interfaces.
- Whether you are working with PLCC, SOIC, TSOP, DIP, TQFP, SSOP, PSOP or QFP, B+K Precision has an extensive line of socket adapters to interface with any IC package.
- This programmer is a must for anyone that Tests, Repairs, or Programs any electronic device that uses a memory IC.
- 48 pin DIL ZIF (Zero Insertion Force) socket accepts both 300/600 mil devices up to 48 pin
- Over 12,438 supported devices (9,734 devices supported via USB interface) as of 5/27/04
- Fast and accurate programming 48 pin ZIF socket, no adapter required for any DIP device up to 48 pins
- Connector for in-circuit programming (ISP) Windows 95/98/Me/NT/2000/XP compatible



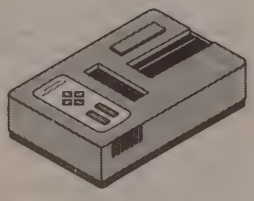
B&K Part Number 866

615-866	Universal Device Programmer with USB Interface	$995.00

Stand Alone Universal Programmer

Features:

- 48 Pin DIP ZIF socket universal pin drivers
- Auto run mode starts programming automatically upon detection of chip insertion
- Supports down to 1.8V low voltage devices
- Supports Windows2000/NT/9x (XP compatible)
- 7 key keypad • Internal CPU
- 16x2 LCD display • 4Mbits data buffer
- Flash memory for programming data and algorithms.
- Programming algorithms for more than 3,000 devices are supported.
- Store more than 30 algorithms at one time.
- Ideal for volume programming or field service operations.
- One year warranty



B&K Part Number 869

615-869	Stand-Alone Universal Programmer	$995.00

BK PRECISION ERASERS

Features:

- **615-850**: UV-EPROM eraser with small dimensions, high erasing efficiency, and simple operation. Up to 5 EPROMs in 40-pin DIP packages can be erased simultaneously. A built-in timer is preset to an optimum erasing period.
- **615-851**: Heavy duty EPROM eraser that can simultaneously erase up to 40 24 pin EPROMs. It has an all-metal case plus an advanced designed chip drawer that prevents UV radiation from being a hazard to the user. The chip drawer is lined with conductive foam to prevent electrostatic damage to the chips.

Specifications:

- Timer Setting: **615-850**:15 min., 12VDC/500mA (AC/DC adapter Included)
  615-851: 60 min., 100-120VAC 50/60Hz
- UV Bulb Wattage: **615-850**: 4W; **615-851**: 10W
- Supplied: **615-850**: AC/DC adapter, Pad, Manual
  615-851: AC Power cord, Manual

XELTEK Universal Programmers & EPROM Erasers

XELTEK

XELTEK SUPERPRO-3000U AND SUPERPRO-3000U-100

These high-speed, USB connected universal programmers provide a scaleable programming solution, used singly for development or with up to 4 units clustered for low volume production. With up to 100 universal pin drivers, low voltage device support down to 1.5V and broad universal adapter range, it supports over 12,000 devices.

Features:

- Over 20, 000 devices supported including memories, microcontrollers and programmable logic
- 48-Pin ZIF socket, no adapters required for 300/600 mil DIP devices up to 48 pins
- 48 universal pin drivers - full functionality on every pin maximizes adapter flexibility
- Optional 100-Pin PEP module with 100 universal pin drivers (standard on SP-3000U-100)
- Universal adapters support all devices that come in same package
- Low voltage device support – down to 1.5V for latest generation devices
- Operates in standalone mode for manufacturing and service – built in keyboard and LCD display for operation without host PC
- Auto-Sense and Batch mode simplifies and speeds up programming work flows
- Auto Serial number adds unique ID to programmed device for identification & tracking
- Broad operating system support – Windows 95/98/Me/2000/NT/XP
- USB connectivity to host PC or USB hub for high speed download
- Free software updates from internet – new device updates released monthly
- High speed operation
- Includes TTL and SRAM test
- 1-Year warranty

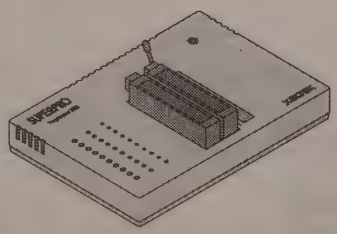
674—SP3000U		High Performance Universal Programmer 48 Pin	995.00
674—SP3000U-100		High Performance Universal Programmer 100 Pin	1245.00
674—PEP3000		100 Pin Adapter for 3000U	295.00
674—128MEG		128 Meg Flash Card	80.00

XELTEK SUPERPRO-580U

Features:

- Programs high-density Flash memory devices at near theoretical minimum programming times. (Program+verify INTEL28F320W18, 32Mb less than 13.5s)
- Standard 48 pin universal pin-drivers come with universal package adapters to support all types of devices in same package with a single adapter. No adapters are needed for DIL devices.
- Advanced hardware features minimized Bounce noise.
- Supports 16,000+ devices from up to 80 IC manufacturers including MEMORY, MCU, PLD.
- Pin continuity and wrong chip insertion check prevent chips from accident damage.
- Over-current and over-voltage protection for programmer hardware.
- Software supports Windows 98/Me/NT/2000/XP. (Free life-time software update.)
- Operator friendly control software combines many powerful functions with ease of use. Recognizes file formats and detects large file offset automatically.



Device Supported:

- EPROM, Paged EPROM, Parallel and Serial EEPROM, FPGA Configuration Serial PROM, FLASH Memory (NOR and NAND), BPROM, NVRAM, SPLD, CPLD, EPLD, Firmware HUB, Microcontroller, MCU, Standard Logic.

Socket Adapters Supported:

DIP, SDIP, PLCC, JLCC, SOIC, QFP, TQFP, VQFP, TSOP, TSOPII, SOP, P SOP, TSSOP, SON, EBGA, FBGA, VFBGA, μBGA, CSP, SCSP, etc.

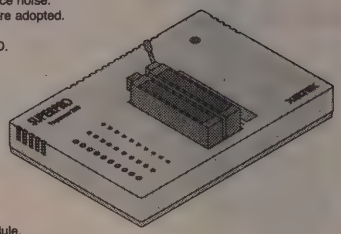
674—SUPERPRO-580U		USB Interfaced Universal Device Programmer	695.00

XELTEK SUPERPRO-280U

Features:

- Programs high-density Flash memory devices.
- Standard 48 pin universal pin-drivers come with universal package adapters to support all types of devices in same package with a single adapter. No adapters are needed for DIL devices.
- Advanced hardware features minimized Bounce noise. Only IC manufacturers approved algorithms are adopted.
- Supports 10,000+ devices from up to 80 IC manufacturers including MEMORY, MCU, PLD.
- Free life-time software update.
- Pin continuity and wrong chip insertion check prevent chips from accident damage.
- Over-current and over-voltage protection for programmer hardware.
- Software supports Windows 98/Me/NT/2000/XP.
- Operator friendly control software combines many powerful functions with ease of use.
- PC Interface: USB
- One year warranty.
- Items included: programming unit, DIL48 Module, AC adapter, Program CD-ROM, USB Cable, User's Guide



Device Support:

- EPROM, Paged EPROM, Parallel and Serial EEPROM, FPGA Configuration Serial PROM, FLASH Memory (NOR and NAND), BPROM, NVRAM, SPLD, CPLD, EPLD, Firmware HUB, Microcontroller, MCU, Standard Logic.

Socket Adapters Supported:

- DIP, SDIP, PLCC, JLCC, SOIC, QFP, TQFP, VQFP, TSOP, TSOPII, SOP, P SOP, TSSOP, SON, EBGA, FBGA, VFBGA, μBGA, CSP, SCSP, etc.

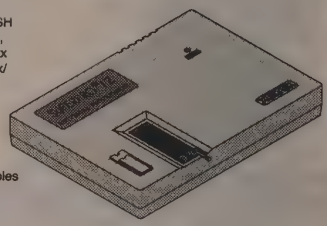
674—SUPERPRO-280U		USB Interfaced Universal Device Programmer	549.00

XELTEK SUPERPRO-Z

Features:

- 40 Pin Low Cost Universal Programmer
- 3000+ devices supported, Most E/EPROM, FLASH
- GAL, EP3xx/6xx/9xx, PEEL, PALCE, PLUS, PLS, PLH, PLC, ATV, ATF, CPL, 85Cxxx,5Cxxx,DS12xx
- Microcontrollers 87xx/ 89xx/ Z86Exx/ TMS320xxx/ D77Pxx/ D75Pxx/ D78Pxx/ PD75xxx/
- HD6370xxx/PIC16Cxx/17Cxx, COP87xx, and PSD3XX
- DOS Shell, Change directory, Print, Quit
- Printer Port Interfaces, parallel communication, uses address 278H,378H, 3BCH
- Easy interface to LAPTOP, PC, PS/2 or compatibles
- Mouse support, user friendly menu driven software interface
- High speed programming, Cost effective Hardware and Flexible Software
- Supports 2000+ devices
- Supports most E(E)PROM, Series E(E)PROM, and Flash
- Entry Level Product



For quantities of 5 and up, call for quote.

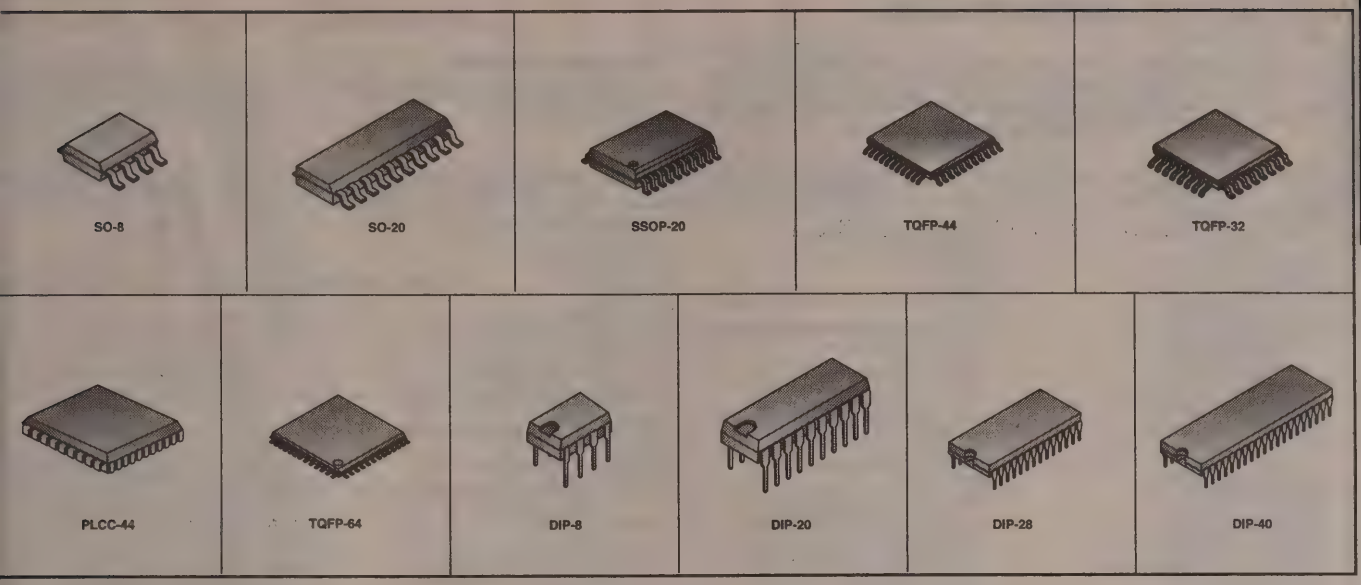
ATMEL RISC Microcontrollers



ATMEL 8-BIT RISC MICROCONTROLLERS

Atmel's AVR microcontrollers have a RISC core running single cycle instructions and a well- defined I/O structure that limits the need for external components. Internal oscillators, timers, UART, SPI, pull-up resistors, pulse width modulation, ADC, analog comparator and watch dog timers are some of the features you will find in AVR devices. AVR instructions are tuned to decrease the size of the program whether the code is written in C or Assembly. With on-chip in-system programmable Flash and EEPROM, the AVR is a perfect choice in order to optimize cost and get product to the market quickly.

For quantities of 100 and up, call for quote.

FAIRCHILD ACE Microcontrollers

FAIRCHILD SEMICONDUCTOR

FAIRCHILD ACEX™ MICROCONTROLLERS

ACEx™ is a family of Arithmetic Control Engine products, primarily intended for battery-powered applications. Operating voltages range down to 1.8V, while standby current consumptions is only 100nA at 3.3V. For portable, battery-powered systems, where minimizing PCB space is of paramount importance, the miniaturized TSSOP-8 package is ideal. ACEx™ Microcontroller family members include powerful on-chip peripherals: multifunction 16-Bit timer, 10-Bit ADC/DAC converter and hardware bit coder.

User Programmable Options:

- Upper Disable Block (Protect Data EEPROM Last 32 bytes)
- Clock Mode: Internal, External Clock, External RC, External Crystal or Resonator
- Brownout Enable
- Read Disable Bit
- Write Disable Bit
- Clock Timing

ACE1001

- Arithmetic Controller Engine
- 1K bytes on-board code EEPROM
- 64 bytes data EEPROM
- 64 bytes RAM
- Watchdog
- Multi-input wake-up 3 I/O pins
- 8-bit Timer1 with PWM output
- On-chip oscillator
  - -No external components
  - -1μs instruction cycle time
- On-chip Power-on Reset
- Brown-out Reset
- Programmable read and write disable functions
- Memory mapped I/O
- Multilevel Low Voltage Detection
- Fully static CMOS
  - -Low power HALT mode (100nA @ 3.3V)
  - -Power saving IDLE mode
- Single supply operation
  - -1.8 - 5.5V (ACE1001L)
  - -2.2 - 5.5V (ACE1001)
- Software selectable I/O options
  - -Push-pull outputs with tri-state option
  - -Weak pull-up or high impedance inputs
- 40 years data retention
- 1,000,000 writes

ACE1502

- Arithmetic Controller Engine
- 2K bytes on-board code EEPROM
- 64 bytes data EEPROM
- 64 bytes RAM
- Watchdog
- Multi-input wake-up on all eight general purpose I/O pins
- 16-bit multifunction timer with difference capture
- Hardware Bit-Coder (HBC)
- On-chip oscillator
  - -No external components
  - -1μs instruction cycle time ±2% accuracy
- Instruction set geared for block encryption
- On-chip Power-on Reset
- Programmable read & write disable functions
- Memory mapped I/O
- 32-level Low Voltage Detection
- Brown-out Reset
- Software selectable I/O option
  - -Push-pull outputs with tri-state option
  - -Weak pull-up or high impedance inputs
- Fully static CMOS
  - -Low power HALT mode (250nA @ 3.6V)
  - -Power saving IDLE mode
- Single supply operation
  - -1.8-3.6V
- 40 years data retention
- 1.8V data EEPROM min writing voltage
- 1,000,000 data changes
- In-circuit programming

ACE8000

- Arithmetic Controller Engine
- 1K bytes on-board code EEPROM
- 64 bytes data EEPROM
- Fast Startup (<10μS)
- 64 bytes RAM
- Watchdog
- Multi-input wake-up 3 I/O pins
- 8-bit Timer1 with PWM output
- On-chip oscillator
  - -No external components
  - -1μs instruction cycle time
- On-chip Power-on Reset
  - -External Reset pin option (ACE8000)
- Brown-out Reset
- Programmable read and write disable functions
- Memory mapped I/O
- Multilevel Low Voltage Detection
- Fully static CMOS
  - -Low power HALT mode (100nA @ 3.3V)
  - -Power saving IDLE mode
- Single supply operation
  - -2.2 - 5.5V
- Software selectable I/O options
  - -Push-pull outputs with tri-state option
  - -Weak pull-up or high impedance inputs
- 40 years data retention
- 1,000,000 writes

ACE8001

- Arithmetic Controller Engine
- 1K bytes on-board code EEPROM
- 64 bytes data EEPROM
- Fast Startup (<10μS)
- 64 bytes RAM
- Watchdog
- Multi-input wake-up 3 I/O pins
- 8-bit Timer1 with PWM output
- On-chip oscillator
  - -No external components
  - -1μs instruction cycle time
- On-chip Power-on Reset
  - -External Reset pin option (ACE8000)
- Brown-out Reset
- Programmable read and write disable functions
- Memory mapped I/O
- Multilevel Low Voltage Detection
- Fully static CMOS
  - -Low power HALT mode (100nA @ 3.3V)
  - -Power saving IDLE mode
- Single supply operation
  - -2.2 - 5.5V
- Software selectable I/O options
  - -Push-pull outputs with tri-state option
  - -Weak pull-up or high impedance inputs
- 40 years data retention
- 1,000,000 writes

Block & Connection Diagrams

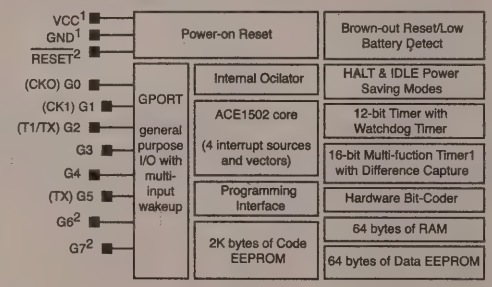
ACE1502:

- (1) 100nf decoupling capacitor recommended
- (2) Available only in the 14-pin package option

ACE1001 & ACE8000/8001:

- (1) 100nf decoupling capacitor recommended
- (2) Input only

ACE1502



ACE1001 & ACE8000/8001

MPC8245 INTEGRATED HOST PROCESSOR

The MPC8245 Integrated Host Processor fits applications where cost, space, power consumption and performance are critical requirements. This device provides a high level of integration, reducing chip count from five discrete chips to one, thereby significantly reducing system component cost. High integration results in a simplified board design, less power consumption and a faster-time-to-market solution. This cost-effective, general purpose integrated processor targets systems using PCI interfaces in networking infrastructure, telecommunications, and other embedded markets. It can be used for control processing in applications such as routers, switches, network storage applications and image display systems.

For quantities 250 and up, call for quote.

32-BIT EMBEDDED PROCESSORS

The MPC5200 is based on a 400 MHz MPC603e PowerPC core with an integrated double precision Floating Point Unit (FPU) that is qualified at -40 to 85 degrees C. The MPC5200 was designed for fast data throughput and processing. The integrated BestComm DMA controller offloads the main MPC603e core from I/O intensive data transfers. An integrated Double Data Rate (DDR) memory controller accelerates data access with an effective memory bus speed of 266 MHz. A high-speed PCI interface backed by the BestComm DMA controller and DDR memory support enables high-speed data transfers in and out of the MPC5200. The MPC5200 is manufactured in 0.13 micron technology.

For quantities 250 and up, call for quote.

MC68360 QUAD INTEGRATED COMMUNICATION CONTROLLER

The MC68360 Quad Integrated Communication Controller is a versatile one-chip integrated microprocessor and peripheral combination family that can be used in a variety of controller applications. The MC68360 particularly excels in communications activities. The QUICC can be described as a next-generation MC68302, with higher performance in all areas of device operation, increased flexibility, and higher integration. The term "quad" comes from the fact that there are four serial communications controllers (SCCs) on the device. However, there are actually seven serial channels which include four SCCs, two serial management controllers (SMCs), and one serial peripheral interface (SPI).

For quantities 250 and up, call for quote.

freescale™ semiconductor

MC56F8300DSK KIT

Freescale's advanced 56F8300 Developers Start Kit brings demonstration, evaluation and development capabilities to the 56F8300 series of Digital Signal Controllers (DSCs). This comprehensive kit includes a demonstration board that utilizes the 60 MIPS 56F8323 DSC with on-chip oscillator to illustrate the enhanced capabilities of the 56F8300 Series. To demonstrate some typical 56F8300 applications in which processing power must be combined with remote sensing capabilities, the MC56F8300DSK integrates Freescale's MC33794 E-field sensor. It also features a built-in JTAG-to-parallel port command converter, with parallel cable included, providing fast and simple out-of-the-box debugging.

Kit Contents:

- MC56F8300DSK Board
- Parallel cable, DB25, M/F
- Universal power supply
- Code-Warrior™ CD for Freescale MC56F8300DSK
- Software, training and documentation CD
- Preprogrammed sample applications

MOUSER STOCK NO.	Freescale Part No.	Price Each
841-MC56F8300DSK	MC56F8300DSK	$89.00

MC56F8323EVM KIT

The MC56F8323EVM is a low-cost kit that contains everything you need to quickly evaluate the features and capabilities of the MC56F8322 and MC56F8323 digital signal controllers silicon and tools.

Kit Contents:

- MC56F8323EVM board
- Installation guide
- Switch mode power supply (12 Volt)
- Parallel cable
- CodeWarrior™
- Development studio for 56800/E special edition

MOUSER STOCK NO.	Freescale Part No.	Price Each
841-MC56F8323EVM	MC56F8323EVM	$337.95

DSP56303EVM KIT

The DSP56303 Evaluation Module is designed as a low-cost platform for developing real-time software and hardware products to support applications in wireless, telecommunications and multimedia products using multi-line voice/date/fax processing, videoconferencing, audio applications, control and general digital signal multi-line voice/date/fax processing, videoconferencing, audio applications, control and general digital signal processing. PC-compatible computer (90MHz or higher) running Windows 95 or NT4 with an RS-232 serial port. 12 Mbytes RAM, 3-1/2 inch diskette drive, CD-ROM drive, hard drive with 20 Mbytes of free disk space. Power supply 7-9 V AC or DC 500 mA with 2.1 mm coaxial connector not included.

Kit Contents:

- DSP56303EVM board
- DSP56300 literature
- Suite56 for Freescale DSP 563xx
- Freescale The DSP56300 Family Documentation
- Domain Technologies Debugger for DSP563xxEVM

MOUSER STOCK NO.	Freescale Part No.	Price Each
841-DSP56303EVM	DSP56303EVM	$282.63

DSP56309EVM KIT

The DSP56309 Evaluation Module is a low-cost platform for developing real-time software and hardware products to support a new generation of wireless, telecommunications and multimedia applications. The DSP56309EVM targets applications requiring a large amount of on-chip memory, such as wireless infrastructure applications. PC compatible computer (Pentium-90 MHz or higher) running Windows 95 (or higher) with an RS-232 serial port. Requires Power supply 7-9 V DC, 500mA, (not included).

Kit Contents:

- DSP56309EVM Board
- GUI Debugger Software Disk
- Assembler Linker-Test files disk
- DSP56309EVM User's Manual and Other Documentation

MOUSER STOCK NO.	Freescale Part No.	Price Each
841-DSP56309EVM	DSP56309EVM	$310.95

DSP56311EVM KIT

The DSP56311 Evaluation Module (EVM) is used to demonstrate the abilities of the DSP56311 device and provide a hardware tool to allow development of applications that use the DSP56311. The DSP56311EVM includes a DSP56311 device, peripheral expansion connectors, external memory and a voice codec. The peripheral expansion connectors allow for signal monitoring and user-feature expendability.

Kit Contents:

- DSP56311EVM Board
- Parallel port extender cable
- Plastic standoffs and plastic screws
- DSP56300 Tools Software
- Device and Tools Documentation
- Tutorial/example software
- DSP56311EVM Development Tools Release Notes
- DSP56311EVM Product Installation Guide

MOUSER STOCK NO.	Freescale Part No.	Price Each
841-DSP56311EVM	DSP56311EVM	$395.68

DSP56F800DEMO KIT

The 56F800 Demonstration kit is a low-cost kit that contains everything you need to quickly evaluate the features and capabilities of the DSP56F801FA60 and DSP56F802TA60 silicon and tools. It also provides an efficient and cost-effective vehicle for hardware and software development.

Kit Contents:

- Demo board
- Complimentary CodeWarrior™ license (8K word program memory limit)
- SDK CD
- Parallel cable
- Instructions for kit
- Training CD
- US Power Supply

MOUSER STOCK NO.	Freescale Part No.	Price Each
841-DSP56F800DEMO	DSP56F800DEMO	$56.47

DSP56F801EVM KIT

The DSP56F801EVM Kit is a low cost kit that contains everything you need to quickly evaluate the features and capabilities of the DSP56F801 silicon and tools. It can be used standalone or in conjunction with our broad range of modular motion control development hardware. The DSP56F801EVM Kit is targeted for use on PC Compatible systems running Windows 95, Windows 98 and Windows NT 4.0.

Kit Contents:

- DSP56F801EVM Installation Guide
- DSP56F801 Evaluation Module Board
- 12 Volt universal switching mode power supply
- IEEE 1284 parallel port cable DB25 male to DB25 female
- Metrowerks CodeWarrior™ for Freescale DSP evaluation CD-ROM (30 day)
- Embedded Software Development Kit (SDK) CD-ROM

MOUSER STOCK NO.	Freescale Part No.	Price Each
841-DSP56F801EVM	DSP56F801EVM	$338.09

DSP56F803EVM KIT

The DSP56F803EVM Kit is a low cost kit that contains everything you need to quickly evaluate the features and capabilities of the DSP56F803 silicon and tools. It can be used standalone or in conjunction with our broad range of modular motion control development hardware. The DSP56F803EVM Kit is targeted for use on PC Compatible systems running Windows 95, Windows 98 and Windows NT 4.0.

Kit Contents:

- DSP56F803EVM Installation Guide
- DSP56F803 Evaluation Module Board
- 12 Volt universal switching mode power supply
- IEEE 1284 parallel port cable DB25 male to DB25 female
- Metrowerks CodeWarrior™ for Freescale DSP evaluation CD-ROM (30 day)
- Embedded Software Development Kit (SDK) CD-ROM

MOUSER STOCK NO.	Freescale Part No.	Price Each
841-DSP56F803EVM	DSP56F803EVM	$337.82

DSP56F805EVM KIT

The DSP56F805EVM Kit is a low cost kit that contains everything you need to quickly evaluate the features and capabilities of the DSP56F805 silicon and tools. It can be used standalone or in conjunction with our broad range of modular motion control development hardware. This kit is targeted for use on PC Compatible systems running Windows 95, Windows 98 and Windows NT 4.0.

Kit Contents:

- DSP56F805EVM Installation Guide and DSP56F805 Evaluation Module Board
- 12 Volt universal switching mode power supply
- IEEE 1284 parallel port cable DB25 male to DB25 female
- Metrowerks CodeWarrior™ for Freescale DSP evaluation CD-ROM (30 day)
- Embedded Software Development Kit (SDK) CD-ROM

MOUSER STOCK NO.	Freescale Part No.	Price Each
841-DSP56F805EVM	DSP56F805EVM	$337.95

DSP56F807EVM KIT

The DSP56F807EVM Kit is a low cost kit that contains everything you need to quickly evaluate the features and capabilities of the DSP56F807 silicon and tools. It can be used standalone or in conjunction with our broad range of modular motion control development hardware. This kit is targeted for use on PC Compatible systems running Windows 95, Windows 98 and Windows NT 4.0.

Kit Contents:

- DSP56F807EVM Installation Guide and DSP56F807 Evaluation Module Board
- 12 Volt universal switching mode power supply
- IEEE 1284 parallel port cable DB25 male to DB25 female
- Metrowerks CodeWarrior™ for Freescale DSP evaluation CD-ROM (30 day)
- Embedded Software Development Kit (SDK) CD-ROM

MOUSER STOCK NO.	Freescale Part No.	Price Each
841-DSP56F807EVM	DSP56F807EVM	$338.09

DSP56F826EVM KIT

The DSP56F826EVM Kit is a low cost kit that contains everything you need to quickly evaluate the features and capabilities of the DSP56F826 silicon and tools. It can be used standalone, or in conjunction with our broad range of modular motion control development hardware. This kit is targeted for use on PC Compatible systems running Windows 95, Windows 98 and Windows NT 4.0.

Kit Contents:

- DSP56F826EVM Installation Guide and DSP56F826 Evaluation Module Board
- 12 Volt universal switching mode power supply
- IEEE 1284 parallel port cable DB25 male to DB25 female
- Codec sample rate selector
- Peripheral Daughter Card Expansion Connector to allow the user to connect his own SCI, SSI, SPI or GPIO compatible peripheral to the DSP
- Memory Daughter Card Expansion Connector to allow the user to connect his own memory or memory device to the DSP
- 16-Bit stereo codec interface
- Metrowerks CodeWarrior™ for Freescale DSP evaluation CD-ROM (30 day)
- Embedded Software Development Kit (SDK) CD-ROM

MOUSER STOCK NO.	Freescale Part No.	Price Each
841-DSP56F826EVM	DSP56F826EVM	$309.88

MICROCHIP PICMicro Microcontroller Family

MICROCHIP

♦ Surface Mount Device

Microchip's RISC-based PICmicro® MCUs are designed for applications requiring high performance and low cost. The PICmicro® MCU portfolio is comprised of more than 140 products and features a variety of memory configurations, low voltage and power, small footprint and ease-of-use. There is a great deal of "smarts" packed into a tiny space in our minimal footprint 8-bit MCUs. As your designs grow in complexity, the code you write (later) can be easily transitioned to larger Microchip MCUs with more peripheral resources. A seamless product migration path between PICmicro® MCU families provides for complete upward compatibility in embedded control designs. If you already know the specifications you need for you application, you can select that criteria through Microchip's parametric search engine. The criteria used in this selection process are: Program Memory, Data RAM, Memory Type and Package. If you are not yet familiar with Microchip's PICmicro® MCUs the following information will help you get started. PICmicro® MCUs combine high performance, low cost, and small package size, offering the best price/performance ratio in the industry. Microchip offers five families of 8-bit MCUs to best fit your needs.

PIC10FXXX 6 PIN, 8BIT FLASH MCU'S. "THE WORLDS SMALLEST MICROCONTROLLER."

High-Performance RISC CPU:

- Only 33 single-word instructions to learn
- All single-cycle instructions except for program branches, which are two-cycle
- 12-bit wide instructions
- 2-level deep hardware stack
- Direct, Indirect and Relative Addressing modes for data and instructions
- 8-bit wide data path
- 8 Special Function Hardware registers
- Operating speed: 4 MHz internal clock
  1μs instruction cycle

Special Microcontroller Features:

- 4 MHz precision internal oscillator: Factory calibrated to ±1%
- In-Circuit Serial Programming™ (ICSP™)
- In-Circuit Debugging (ICD) support
- Power-on Reset (POR)
- Device Reset Timer (DRT)
- Watchdog Timer (WDT) with dedicated on-chip RC oscillator for reliable operation
- Programmable code protection
- Multiplexed MCLR input pin
- Internal weak pull-ups on I/O pins
- Power-saving Sleep mode
- Wake-up from Sleep on pin change

Low-Power Features/CMOS Technology:

- Operating Current: < 350 μA @ 2V, 4 MHz
- Standby Current: 100 nA @ 2V, typical
- Low-power, high-speed Flash technology:
  100,000 Flash endurance
  > 40 year retention
- Fully static design
- Wide operating voltage range: 2.0V to 5.5V
- Wide temperature range: Industrial: -40°C to +85°C
  Extended: -40°C to +125°C

MICROCHIP PICMicro Microcontroller Family

MICROCHIP

IC16CXXX/PIC16FXXX Family: 14-bit program word:
With the introduction of new PIC16CXXX/PIC16FXXX family members, Microchip now provides the industry's highest performance Analog-to-Digital onverter capability at 12-bits for an MCU. The PIC16CXXX/PIC16FXXX family offers a wide-range of options, from 18- to 68-pin packages as well as w to highest levels of peripheral integration. This family has a 14-bit wide instruction set, interrupt handling capability and a deep, 8-level hardware tack. The PIC16CXXX/PIC16FXXX family provides the performance and versatility to meet the more demanding requirements of today's cost-sensitive arketplace for mid-range applications.

MICROCHIP PIC16CXXX MCUS

Features:

Upwardly Compatible with PIC16C5x/PIC12Cxxx, 4-12 Interrupts, 100-500ns Instruction Execution, 35 Instructions, 4/5 Oscillator Selections. CSPTM; BOR/PBOR.

MICROCHIP PIC16FXXX FLASH MCUS

Features:

Upwardly Compatible with PIC16Cxxx/PIC16C5x/PIC12Cxxx, 4-12 Interrupts, 200ns Instruction Execution, 35 Instructions, 4 Oscillator Selections, 25mA Source/Sink per I/O. ICSPTM; BOR/PBOR; 2-8 bit, 1-16 bit Timer; 1-WDT.

MICROCHIP PIC18FXXX FLASH MCUS

PIC18FXXX Flash MCU Family: enhanced 16-bit program word:

The PIC18FXXX is a family of high performance, CMOS, fully static MCUs with integrated analog-to-digital (A/D) converter. The PIC18FXXX has enhanced core features, 32 level-deep stack, and multiple internal and external interrupts sources. The separate instruction and data busses of the Harvard architecture allow a 16-bit wide instruction word with the separate 8-bit wide data. The two-stage instruction pipeline allows all instructions to execute in a single cycle, except for program branches, which require two cycles. A total of 77 instructions (reduced instruction set) are available. Additionally, a large register set gives some of the architectural innovations used to achieve a very high performance of 10 MIPS for an MCU. The PIC18FXXX family has special features to reduce external components, thus reducing cost, enhancing system reliability and reducing power consumption. These include programmable Low Voltage Detect (LVD) and programmable Brown-Out Detect (BOD).

Features:

- Upwardly Compatible with PIC18CXXX/PIC17C7XX/PIC16CXX/PIC16C5X/PIC12CXXX, 77 Instructions, C Compiler Efficient Instruction Set, Software Stack Capability, Table Read/Write, 10 MIPS, 4x PLL, Switchable Oscillator Sources, 25mA Source/Sink per I/O.

MICROCHIP dsPIC 16-Bit Digital Signal Controller

MICROCHIP

The dsPIC® Digital Signal Controller (DSC) from Microchip is a powerful 16-bit (data) modified Harvard RISC machine that combines the control advantages of a high-performance 16-bit microcontroller (MCU) with the high computation speed of a fully implemented digital signal processor (DSP) to produce a tightly coupled single-chip single-instruction stream solution for embedded systems design.

These dsPIC devices reach speeds of up to 30 MIPS, are very efficient for C programming, and have Flash, data EEPROM, powerful peripherals and a variety of software libraries that allow high performance embedded solutions to be designed effortlessly and in a short amount of time. With a familiar microcontroller architecture and design environment, these dsPIC digital signal controllers target applications such as motor control and power conversion, high-speed sensors, speech and audio, internet and modem connectivity, telecom, encryption and automotive applications.

MICROCHIP DSPIC30F MOTOR CONTROL & POWER CONVERSION 16-BIT DIGITAL SIGNAL CONTROLLER

- 28, 40, 44, 64, and 80-pin packages scale to fit a wide range of I/O requirements
- Powerful peripherals needed for motor control and power conversion applications:
  - Motor control specific PWMs with dead-time compensation
  - Fast A/D converters with quad sample and hold circuits
  - Motor feedback quadrature encoder interface
  - Multiple serial interfaces including CAN, UART, SPI, and I2C

MICROCHIP DSPIC30F SENSOR 16-BIT DIGITAL SIGNAL CONTROLLER

- Low-cost, high-performance devices
- 18 and 28-pin packages designed for space constrained applications
- Critical peripherals needed for sensor applications:
- 16-bit timer/Input capture/output compare/standard PWMs
- 12-bit A/D converters in 8 or 10 channel options
- Multiple serial interfaces including CAN, UART, SPI, and I2C

MICROCHIP DSPIC30F GENERAL PURPOSE 16-BIT DIGITAL SIGNAL CONTROLLER

- 40, 44, 64, and 80-pin packages scale to fit a wide range of I/O requirements
- Robust complement of powerful peripherals for a wide range of applications:
- 16-bit timer/Input capture/output compare/standard PWMs
- 12-bit A/D converters
- Multiple serial interfaces including CAN, UART, SPI, and I2C
- Codec interface supports the I2S and AC97 processes

MICROCHIP Demonstration Boards & Kits

PICDEM Z ZIGBEE™ DEMONSTRATION KIT

The PICDEM™ Z demonstration kit is an easy-to-use ZigBee™ Technology wireless communication protocol development and demonstration platform. The demonstration kit includes the ZigBee protocol stack and two PICDEM Z boards, each with an RF daughter card. The demonstration board is also equipped with a 6-pin modular connector to interface directly with Microchip's MPLAB® ICD 2 in-circuit debugger (DV164005).

Key Features of the PICDEM Z Demonstration Kit Includes:

- ZigBee software stack supporting RFD (Reduced Function Device), FFD (Full Function Device) and Coordinator
- PIC18LF4620 MCU featuring nanoWatt Technology, 64 KB Flash memory and robust integrated peripherals
- RF transceiver and antenna interface via daughter card for flexibility
- Supports 2.4 GHz frequency band via Chipcon CC2420 RF transceiver
- ICSP and MPLAB ICD 2 interface connector
- RS-232 interface
- 9V DC to 3.3V DC regulator
- Temperature sensor (Microchip TC77), LEDs and button switches to support demonstration

PICKIT™ 1 8/14-PIN FLASH STARTER KIT

The PICkit™ 1 FLASH Starter Kit is a low-cost development kit with an easy-to-use interface for programming Microchip's 8-/14-pin FLASH family of microcontrollers. This starter kit is designed to help the user get up to speed quickly using PIC® microcontrollers.
The kit provides everything needed to program, evaluate and develop applications using Microchip's powerful 8-/14-pin FLASH family of microcontrollers. Instructions are provided in a series of seven tutorials that cover I/O, Interrupts, A/D Converters, Comparators, Data Tables and Timers. All source code files for the tutorials are furnished.

Features:

- PICkit 1 Circuit Board with 8-pin PIC12F675
- PICkit 1 FLASH Starter Kit CD-ROM, including the HI-TECH PICC™ LITE C Compiler
- Software and Hardware "Tips 'n Tricks" for 8-pin FLASH PIC Microcontrollers booklet
- USB Interface Cable
- MPLAB® Integrated Development Environment CD-ROM

System Requirements/Supported Operating Systems:

- Windows 98 Second Edition
- Windows ME
- Windows 2000
- Windows XP
- Available USB Port

Important Note: The PICkit(tm) 1 FLASH Starter Kit software will not run on Windows 98 1st edition.

DO NOT INSTALL THIS SOFTWARE ON WINDOWS 98 1ST EDITION

MICROCHIP PLAB® ICE 2000 AND MPLAB® ICE 4000 EMULATOR SYSTEMS

How Do I Order MPLAB ICE?

Ordering MPLAB ICE is as easy as 1, 2, and 3!
1: Choose your PICmicro MCU.
2: Choose your PICmicro package.
3: Find the right line on the next few pages for MPLAB ICE part numbers. You're ready to order.

MPLAB ICE is a modular emulator system with interchangeable components allowing the system to be easily configured to emulate different PICmicro MCUs. Since this emulator supports package-specific emulation, customers need to know which device and package they intend to emulate. Then, the customer can use the Cross Reference Parts List on the following pages to identify the part numbers required to complete an MPLAB ICE system.

A complete system consists of:
- An emulator pod (including among other things the host-to-pod parallel cable and power supply)
- A processor module
- A device adapter
- A transition socket

An MPLAB ICE emulator system is ordered as separate components. Knowing the terms will make it easy to order and use the MPLAB ICE emulator system. Read more about each component:

- **Emulator Pod:**
  The MPLAB ICE 2000 and MPLAB ICE 4000 are full-featured emulator pods containing a main board with an additional board for expanded trace memory and complex control logic. The pods come with a standard parallel interface cable that connects the pods to the parallel port of the PC and a power supply. MPLAB ICE 4000 also includes a USB interface cable that connects the pod to the USB port.
- **Processor Module:**
  The processor module is a PICmicro, device-specific module that is inserted into the emulator pod. The processor module contains the emulator chip, logic, and low-voltage circuitry. A flex cable extends from the processor module and is connected to the device adapter at the target application.
- **Device Adapter:**
  The device adapter provides a common interface for the PICmicro MCU being emulated. This adapter contains a special device that provides an oscillator clock allowing the user to accurately emulate the RC characteristics of the PICmicro MCU. The device adapter provides emulation support for standard DIP and PLCC styles. For emulation support of other packages, a transition socket is needed along with the device adapter.
- **Transition Socket:**
  The transition sockets are available in various styles to allow the common device adapter to be translated to support surface-mount packages, such as SOIC, SSOP, PQFP, TQFP and MLF.

ki Semiconductor ML67Q4050/4060 SERIES

he World's Smallest ARM®

e Advantage Microcontroller™ 4050 Series and 4060 Series are the latest product offerings in Oki Semiconductor's growing lineup of ARM® products. These devices use the 32-bit ARM7TDMI™ core with a oice of either 64KBytes or 128KBytes of 32-bit wide, zero wait state embedded Flash.

e architecture allows full speed zero wait state execution of 32-bit ARM code from Flash and SRAM. These devices contain 16KBytes of SRAM, multiple serial channels (UARTs, I^2C, I^2S and SPI), as well multiple timers, A/D converter channels, RTC, WDT, direct drive LED capability, and direct interfaces to Oki's ML7029 ADPCM and MSM7716 Linear Codecs.

h no external bus, the 4060 Series has the world's smallest packaged ARM-based microcontroller (5.09 mm x 4.84 mm W-CSP package option.) The 4050 Series expands on the base feature set with an ernal address and data bus and additional I/O capabilities. The integration of the ARM core, capable of executing either the 32-bit ARM or the 16-bit THUMB instructions, a robust offering of peripherals and low-power consumption feature targets these parts to a variety of consumer, medical and industrial applications.

etures:

- lax Frequency (Single Cycle FLASH): 33.333 MHz
- ystem Timer: 1
- MA: 2 Channel
- 3-bit Real Time Clock: 1
- 3-bit Watchdog Timer: 1
- 16-bit Flexible Timer (AR/IC/OC/PW): 6 Channel
- 10-bit A/D: 4
- Multi-Master I^2C: 1
- Master/Slave SPI with FIFOs: 2
- 9-bit capable UARTS with FIFOs
- 2 channels
- Serial I/O: 1 channel
- I^2S: 1 channel
- GPIO 40/108

For quantities 50 and up, call for quote.

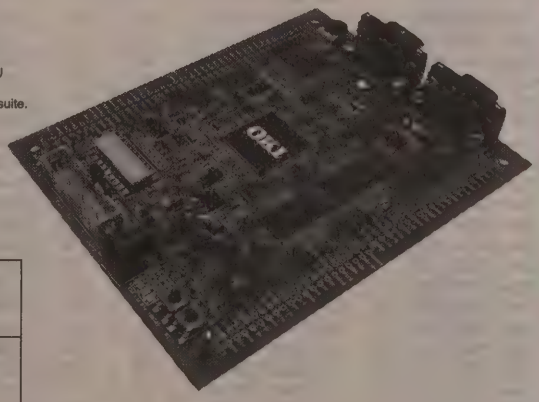
ki Semiconductor ADVANTAGE MICROCONTROLLER KIT™

e Advantage Microcontroller Evaluation (AME) Kit contains all that is needed to evaluate and write software for Oki's 4050 and 4060 Series rocontrollers. Based on a concept of modularity, Oki has developed the AME processor board which provides everything necessary for MCU ration and gives easy access to all I/O and peripherals of the device. The AME-51 board supports the 4050/4060 Series and is the key nponent in the AME-51 evaluation kit. The kit also contains a USB JTAG ICE and a 32KB code limited IAR KickStart software development suite.



MOUSER STOCK NO.	Oki Semiconductor Part No.	Description	Price Each
8-AME67Q4051-1	AME67Q4051-1	Advantage Microcontroller Evaluation kit including the modular AME-51 board, sample source code, 32K limited C-Compiler, USB-JTAG debugger, and power source. Supports evaluation and development of Oki's 4050 and 4060 Series Microcontrollers.	249.00

SILICON LABS Development Kits and Microcontrollers

SILICON LABORATORIES

MICROCONTROLLER DEVELOPMENT KITS

Silicon Labs development kits provide a comprehensive integrated development environment for unobtrusive real-time debug IN YOUR TARGET SYSTEM. Common debugging features such as breakpoints, read/write memory, run, halt, and single-stepping are all supported. There is no need to purchase expensive emulator-based HW. These kits are complete with all hardware, software, cables and power supply. The user needs only to provide a PC running Windows (95/98/NT/2000/XP) with a free COM port.

MOUSER STOCK NO.	Silicon Labs Part No.	Description	Price Each
634-C8051F005DK-G	C8051F005DK	Development Kit for C8051F000, F001, F002, F005, F006, F010, F011, F012, F015, F016, F017, F018 and F019 MCUs	99.00
634-C8051F020DK-G	C8051F020DK	Development Kit for C8051F020, F021, F022, and F023 MCUs	129.00

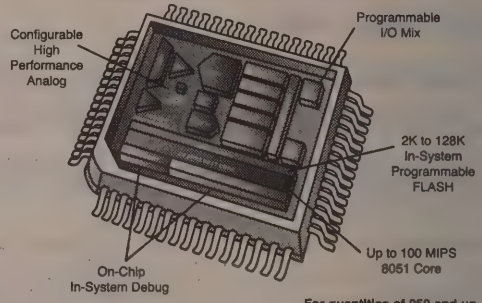
C8051F HIGH PERFORMANCE MIXED-SIGNAL MICROCONTROLLERS

Silicon Laboratories' mixed-signal microcontrollers integrate world-class analog, a high-speed pipelined 8051 CPU, ISP Flash memory and on-chip JTAG based debug in each device. Configurable high-performance analog, up to 100 MIPS core and in-system programmability provide the user with complete design flexibility, improved time-to-market, superior system performance and greater end product differentiation

Features:
- 20 to 100 MIPS 8051 CPU
- 32 to 128KB Flash memory
- 256 to 8448KB RAM
- 1024-bit ADC with up to 1 Msps
- Up to 12-bit DACs
- Up to three comparators
- Voltage reference
- Temperature sensor
- 45 16-bit Timers
- 36 channel PCA
- 864 Digital I/O
- 16 x 16 MAC

Applications:
- Industrial and process feedback control systems
- Instrumentation
- Test systems
- Point-of-sale terminals
- Satellite radio systems
- Cellular base stations
- Fiber optics systems
- Portable and stationary test equipment
- Weigh scales
- Smart transmitters
- Automatic Test Equipment (ATE)

Typical Silicon Labs MCU Chip



Configurable High Performance Analog
Programmable I/O Mix
2K to 128K In-System Programmable FLASH
Up to 100 MIPS 8051 Core
On-Chip In-System Debug

For quantities of 250 and up, call for quot

8051F200 Family

e C8051F200 family offers a 25MIPS 8051 CPU, in-system programmability, and in-system debugging capabilities. All family members have 8K bytes of in-system programmable FLASH and up to 1280 bytes of SRAM. Built-in debug pport circuitry enables low-cost, in-system debugging via JTAG interface (see Development Kit). On-board hardware digital peripherals include UART and SPI™ serial interfaces and three 16-Bit timers. Optional analog peripherals lude up to a 12-Bit 100ksps ADC and two comparators. Each I/O port pin can be configured in firmware as either digital I/O or as an ADC input. Ideal for a wide range of generalpurpose, embedded applications.

8051F040 Family with CAN Bus

C8051F040 family features the same 25MIPS 8051 code-compatible CPU, in-system programming/debugging, and analog and digital peripherals. In addition, it has an integrated CAN 2.0B controller with 32 message objects, each its own filter mask. The 'F040 parts also have a +/- 60V Programmable Gain Difference Amplifier. Available in a 100-pin or 64-pin TQFP with up to 64 Digital I/O, it also has a fully parallel External Memory Interface (EMIF) for data rage, two UART's, a SPI Bus, and an SMBus. There are two independent ADC's, one 12-bit 100ksps, and the other 8-Bit 500ksps each with its own input multiplexer, as well as two 12-bit DAC's, a voltage reference, and a temperature sor. All 'F040 family members have 64K bytes of in-system programmable FLASH memory and 4352 bytes of SRAM.

For quantities of 250 and up, call for quote.

8051F320 FAMILY WITH USB 2.0 BUS

C8051F320 devices feature an integrated USB 2.0 function controller integrated PHY and clock circuits. No crystal or external components required! The devices also include a 24MIPS 8051 code-compatible d, in-system programming/debugging, 16Kbytes Flash, 2304 Bytes , a 10-bit ADC and many other peripherals. Available in the tiny 5 x n 28-pin MLP package or 32-pin LQPF, these devices provide a true le-chip solution for embedded USB applications.

NO CRYSTAL OR EXTERNAL COMPONENTS REQUIRED!

SB TO UART BRIDGE-SINGLE CHIP SOLUTION

gle-chip USB to UART bridge that converts data traffic between USB and UART formats.

tures:
- 8 Function Controller and Transceiver
- grated 1024-byte EEPROM
- grammable Baud rates
- grated clock no external crystal required
- USB specification 2.0 compliant 12 Mbps
- EEPROM security lock function
- Integrated transceiver no external resistors required
- USB suspend states supported

Example Applications:
- Upgrade of RS-232 legacy devices to USB
- Cellular phone USB interface cable
- PDA interface cable
- USB to RS-232 serial adapter

Specifications:
- Self-powered: 3.0 - 3.6 V
- USB bus powered: 4.0 - 5.25 V
- Temperature Range: -40 to 85° C

For quantities of 250 and up, call for quote.

KEIL SOFTWARE MCU DEVELOPMENT TOOLS

Keil Software makes C compilers, macro assemblers, real-time kernels, debuggers, simulators, integrated environments, and evaluation boards for the 8051, 251, ARM, and XC16x/C16x/ST10 microcontroller families.

8051 MCU DEVELOPMENT TOOLS FOR CLASSIC AND EXTENDED 8051 DEVICES

MOUSER STOCK NO.	Keil Software Part No.	Description	Price Each
830-PK51	PK51	C51 V8 Professional Developer's Suite - Includes CA51 + µVision Simulator and Target Debugger, Extended Device Support, LX51 Code Packing Linker, ISD51 In-System Debugger, and RTX Tiny RTOS	2895.00
830-CA51	CA51	C51 V8 Compiler - Includes A51 + C Compiler	1695.00
830-A51	A51	A51 V8 Assembler - Includes Assembler, Utilities, and µVision IDE	495.00
830-MCBX51	MCBX51	8051/251 Single Board Comp. - Includes 2K- Limited 8051/251 Tools with Assemble/Compiler/Debug/Simulator/Monitor	295.00
830-ULINK	ULINK	USB-JTAG Adapter - Connects PC's USB Port to Hardware's JTAG Interface	300.00

LPC DEVELOPMENT TOOLS FOR PHILIPS 89LPC9xx DEVICES

MOUSER STOCK NO.	Keil Software Part No.	Description	Price Each
830-MCB900	MCB900	Prototype Board for Phillips 89LPC9xx - Includes µVision LPC Studio and 4K-Limited Tools with Assembler/Compiler/Debugger/Simulator	60.00
830-EPM900	EPM900	Emulator/Programmer for Philips 89LPC9xx - Includes µVision LPC Studio and 4K-Limited Tools with Assembler/Compiler/Debugger/ Simulator	200.00

251 MCU DEVELOPMENT TOOLS FOR ATMEL, INTEL, AND SANYO DEVICES

MOUSER STOCK NO.	Keil Software Part No.	Description	Price Each
830-DK251	DK251	C251-V3 Developer's Suite - Includes CA251 + µVision Simulator and Target Debugger	2595.00
830-CA251	CA251	C251 V3 Compiler - Includes A251 + C Compiler	1795.00
830-A251	A251	A251 V3 Assembler - Includes Assembler, Utilities, and µVision IDE	695.00
830-MCBX51	MCBX51	8051/251 Single Board Computer - Includes 2K- Limited 8051/251 Tools with Assembler/Compiler/ Debugger/Simulator/Monitor	295.00

ARM MCU DEVELOPMENT TOOLS FOR ARM-POWERED DEVICES

MOUSER STOCK NO.	Keil Software Part No.	Description	Price Each
830-PK-ARM	PK-ARM	C166 V5 Professional Developer's Suite - Includes all components of the CA-ARM, the µVision IDE, Debugger, and Simulator, and ARTX Tiny RTOS	4095.00
830-CA-ARM	CA-ARM	CARM V2 C Compiler for ARM - Includes Assembler, C Compiler, Run-Time Libraries, Utilities, and µVision IDE	2695.00
830-DB-ARM	DB-ARM	Debugger/Simulator for ARM - Includes the µVision IDE, Debugger, and Simulator, ULINK USB-JTAG Adapter, and Keil Evaluation Assembler, Compiler, and Linker. Supports GNU, ADS/RealView, and Keil tools.	2295.00
830-AR-ARM	AR-ARM	Advanced RTX Real-Time Operating System for ARM - includes Flash File System and TCP/IP Networking Support.	4195.00
830-MCBSTR7	MCBSTR7	MCBSTR7 Eval Board - uses the new STMicroelectronics STR710FZ2 controller - Includes everything that is required for a single-chip STR7 system — USB, CAN, and two UART interfaces, analog input (via potentiometer), and 8 LEDs	149.00
830-MCB2100	MCB2100	LPC211x/212x Single-Board Computer with CAN & JTAG - Includes Evaluation Keil ARM Tools with Assembler/ Compiler/Debugger/ Simulator	149.00
830-MCB2130	MCB2130	LCP213x Single-Board Computer with JTAG - Includes Evaluation Keil ARM Tools with Assembler/Compiler/Debugger/Simulator	149.00
830-MCB2140	MCB2140	LPC214x Evaluation USB Board - Uses the new Philips LPC2148 ARM Power Microcontroller, Includes an eval version of the Keil Development Suite for ARM that includes extensive example projects on the usage of the LPC2100 devices	149.00
830-ULINK	ULINK	USB-JTAG Adapter - Connects PC's USB Port to Hardware's JTAG Interface	300.00

C166 MCU DEVELOPMENT TOOLS FOR XC16x/C16x/ST10

MOUSER STOCK NO.	Keil Software Part No.	Description	Price Each
830-PK166	PK166	C166 V5 Pro Developer's Suite - Includes all components of the CA166 + µVision Simulator and Target Debugger	3495.00
830-CA166	CA166	C166 V5 Compiler - Includes all components of the A166 + C166 Compiler, EC++ Compiler, Run Time Libraries, and RTX166 Tiny RTOS	2395.00
830-A166	A166	A166 V5 Assembler - Includes Assembler, Utilities, and µVision IDE	695.00
830-AR166	AR166	Advanced RTX Real-Time Operating System for C16x/XC16x/ST10 - Includes Flash File System and TCP/IP Networking Support	3495.00
830-MCB167NET	MCB167NET	C167 Single Board Computer with CAN & Ethernet - Includes 4K-Limited XC16x/C16x/ST Tools with Assembler/Compiler/ Debugger/ Simulator/ Monitor	295.00
830-MCBXC167-BASIC	MCBXC167-BASIC	XC167 Single Board Computer - Includes 4K-Limited XC16x/C16x/ST10 Tools with Assembler/ Compiler/ Debugger/ Simulator / Monitor	149.00
830-MCBXC167-NET	MCBXC167-NET	XC167 Single Board Computer with CAN & Ethernet - Includes 4K-Limited XC16x/ C16x/ST10 Tools Assembler/ Compiler/Debugger/ Simulator/ Monitor	399.00
830-ULINK	ULINK	USB-JTAG Adapter - Connects PC's USB Port to Hardware's JTAG Interface	300.00

PC-LINT SYNTAX CHECKER - TIME-SAVING SOFTWARE PACKAGE

MOUSER STOCK NO.	Keil Software Part No.	Description	Price Each

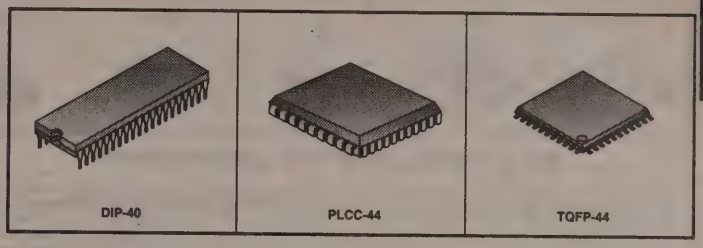
SST Microcontrollers

SST FLASHFLEX51 89 SERIES MICROCONTROLLERS

he FlashFlex51 Microcontrollers come with on-chip flash EEPROM program memory. The flash occupies 16, 32, or 64 Kbyte of internal program memory and can be programmed via a standard 87C5x OTP EPROM rogrammer fitted with a special adapter and firmware fro SST's device. During the power-on reset, the device can be configured as a slave to an external host for source code storage or as a master to an external host f an In-Application Programming (IAP) operation.

atures:

- Serial Interfaces: Enhanced UART and SPI Bus Interface (Master/Slave Operation)
- 8-bit 8051 Compatible Microcontroller (MCU) with Embedded SuperFlash Memory
  - Software Compatible
  - Development Toolset Compatible
  - Pin for Pin Package Compatible
- High Functional Timer / Counter Complement
  - Three 16-bit Timer / Counters
  - Programmable Watchdog Timer (WDT)
  - Programmable Counter Array (PCA)
- TTL and CMOS Compatible Logic Levels
- Three High-Current Drive Ports
- Low Power Modes
  - Power-down Mode with External Interrupt Wake Up
  - Idle Mode
- Brown-out Detection



For quantities 50 and up, call for quote.

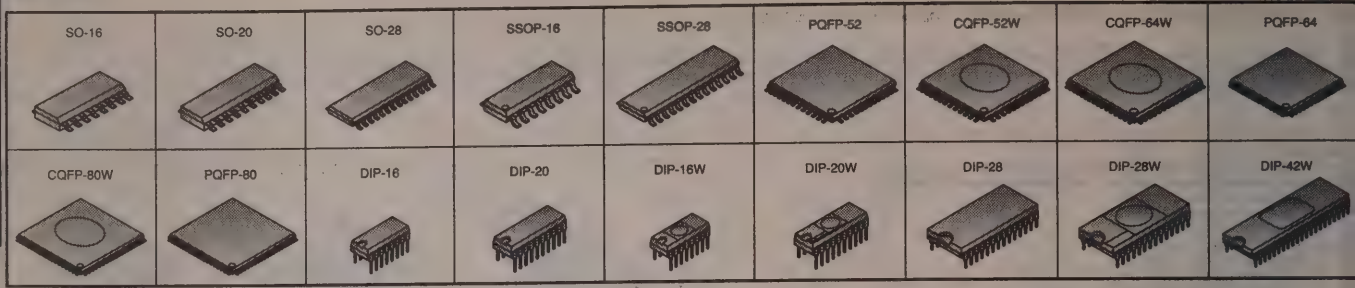
STMICROELECTRONICS Mature Standard 8 &16-Bit Microcontrollers



ST6 GENERAL PURPOSE CONTROL 8-BIT

The ST62 family is optimized for low to midrange 8-bit embedded control applications which are often subject to two conflicting requirements: obtaining both high noise immunity and low overall system cost. With a rich selection of peripherals and memory sizes including data EEPROM, the ST62 family is available in packages ranging from 16 to 100 pins, making it easy to find the product that matches the cost target. The ST62 family is based on a standard 8-bit CPU core, surrounded by a powerful range of peripherals. The ST62 family offers all the major functions needed for embedded control: RC oscillator, 32Khz internal oscillator, safe power-on, high-current buffers for directly driving LEDs and TRIACs (with zero-crossing detection directly from the mains), safety oscillator, 8-bit ADC, data EEPROM, LCD driver, SPI, UART, Auto-Reload Timer... Each device offers a different mix of peripherals, so you can pick the one with only those features required by your application and you only pay for the hardware you really need.

Abbreviations:

ART = Auto-reload timer
IC/OC = Input capture/output compare
LVD = Low-voltage detection
OSG = Oscillator safeguard
ROP = Readout protection
SPI = Serial peripheral interface
UART = Universal asynchronous receiver transmitter

MICROCONTROLLER DEVELOPMENT TOOLS

Emulators for the ST62 family

The ST6 real time development system is an advanced hardware development system designed and configured to provide comprehensive support for the ST6 family of microcontrollers.

Hardware Features:

- Real time emulation
- 32KB of emulation memory
- Breakpoint on a single address or on an address range
- Break events can be defined in program space or data space combined with up to 4 external signals
- 2 fully programmable signal inputs for hardware triggering or timing measurements
- Register read/write on-the-fly (without wait states)
- Selective trace in address range or start/stop mode
- Break on stack overflow
- 1Kbytes of real trace memory
- Tracing of up to 32 bits including external signals

Windows GNU Debugger for ST6 (included):

- Assembler source-level debugging
- On-line assembler/disassembler
- Log file capable of storing any displayed screen.
- Batch execution of debugger commands
- Software breakpoints definable on source or disassembled code, to stop execution when a chosen instruction is reached.
- Step-by-step execution on source and machine code. A function call can optionally be considered as a single instruction.
- Keeps a trace of memory access during program execution.
- Enables you to view the stack contents.
- View and modify the simulated/emulated ST6 memory and register contents.
- View and modify data symbol values in real time.
- Auto executes GDB6 command batch files, with or without the WGDB6 graphical interface, at start-up.

Package Contents:

- ST6-HDS2 emulator
- Power supply
- "MCU on CD" CD-ROM
- A set of probes (including SOP adapters)
- Parallel interface cable
- User manual

Software Features:

- IDE interface (ride) for Windows 95, Windows 98 and Windows NT
- C or assembler source-level debugging

MOUSER STOCK NO.		Description	Price Each

STMICROELECTRONICS Mature 8-Bit Microcontrollers

STMicroelectronics

MICROCONTROLLER PROGRAMMING TOOLS

EPROM Programmers for the ST62 Microcontroller Family

These EPROM programming boards can run either standalone or remote mode (connected to a PC). In standalone mode, the microcontrollers can be programmed by simply pressing a key to start copying the code from a master EPROM device or a master microcontroller. Two-color LEDs indicate if the operation has passed or failed. In the standalone mode an EPROM memory or a master microcontroller is plugged into the programming board. The code from the EPROM or the master microcontroller is read and programmed into the ST62 EPROM or OTP device. Both Verify and Blank Check functions are provided. In the remote mode, the programming board is connected to a PC through an RS-232 serial channel or a parallel port. Object code in either S19 or Intel Hex format is read from a disk file to program the ST62 EPROM or OTP device. The Windows software also offers Verify, Blank Check, and Read Master functions. The software allows various user friendly facilities, such as re-installing the same programming session, user selectable programming steps. It also allows serial numbering with auto-incrementation.

Hardware Features:

- Standalone and remote modes
- All packages supported (except SSOP)
- Programs both the ST62Exx EPROM and OTP microcontrollers

Software Features:

- Windows 95, 98 or NT software
- S19 or Intel Hex file formats

ST7 INDUSTRY STANDARD FAST CORE ARCHITECTURE 8-BIT

The ST7 core is based on an industry standard 8-bit architecture, extended by STMicroelectronics to improve support for high level language programming and to provide additional interrupt handling features. The accumulator-based core has six internal registers including a 16-bit program counter. The instruction set has 63 instructions with 17 addressing modes offering 8x8-bit unsigned multiply, true bit manipulation, various bit/byte transfer modes and powerful branching logic. Peripheral resources are handled via dedicated interrupts and registers.

- Fast multiplication: 11 cycles or 1.37 µsecs for 8 x 8 bits (16-bit result)
- Rich choice of addressing modes for efficient handling of data in RAM (fast manipulation of tables).
- Direct memory addressing (no page handling overhead)
- Up to 16 interrupt vectors for flexible interrupt management.
- Fast interrupt response: 1.5µs typical (with 5-byte context save).
- Powerful bit manipulation instructions

Abbreviations:

CAN = Controller area network
ISP = In-situ programming
I2C = Inter-integrated circuit
LVD = Low-voltage detection
ROP = Readout protection
SPI = Serial peripheral interface
SCI = Serial communications interface
SWG = Square wave generator
WDG = Watchdog timer

STMICROELECTRONICS Mature 8 & 16-Bit Microcontrollers

ST7 EVALUATION BOARDS

SAFE ST7 Evaluation Board

These evaluations boards are intended to help in the evaluation of the behavior of ST7 microcontrollers, as well as complete solutions including MCU firmware and PC software.

Embedded Peripherals:

- Integrated LVD/AVD (low voltage detector/auxiliary voltage detector) to avoid external circuitry and data loses
- Safe backup clock (CSS: clock security system)
- High sink I/Os (up to 50mA) to drive directly LEDs and buzzers
- IAP: In-application programming
- ICP: Flash in-circuit programming

Target Devices:

ST72260, ST72262, ST72264 soldered on the board, pre-programmed with examples of software applications that demonstrates the safe behavior of the ST7LITEx, ST7226x and ST72F32x.

MOUSER STOCK NO.		Supported Devices	Price Each
Mfr.	Mfr. Part Number		
511—ST7FOPTIONS-EVAL		ST7LITEx, ST7226x and ST72F32x	354.20

ST7 TRAINING & EVALUATION BOARDS

ST training and evaluation kits are prototype target boards with basic features designed for evaluating sample devices and for self-training on ST7 devices. They offer the following benefits:

Self Training:

Many exercises in the user manual will allow designers to familarize themselves with the ST7 and peripherals and reduce development times.

Evaluation:

- Designers can perform tests and evaluate all the peripherals of the ST7: SPI, I2C, SCI, CAN, etc.

Programming:

- The board is equipped with the ISP/ICC connector to allow flash in-situ programming

Features:

- ISP/ICC connector
- RS-232 connector
- Trimmer
- LCD, LED's
- Reset button
- External interupt management
- Buzzer
- Prototype area
- Power supply

Supplimental Hardware

Hardware Compatibility:

- ST7MDT20-EVC/US: In TQFP-64 (socket CAB) EMU2B, DVP2, inDART, STICK, EPB2
- ST7MDT20-EVY/US: In TQFP-64 (socket Yamaichi) EMU2B, EMU3, DVP2, DVP3, inDART, STICK, EPB2

ST7 INDART IN-CIRCUIT DEBUGGER

STMicroelectronics partners with SofTec Microsystems to provide the ST7 community with low-cost, but very powerful tools. These kits provide you with everything you need to write, download and in-circuit debug user code for all flash-based ST7 microcontrollers. inDART-ST7 takes advantage of the STVD7 ST integrated development environment (ST7 Visual Debug) and the ICP (in-circuit programming) capability. inDART offers hardware and software debugging features such as real-time code execution, stepping and breakpoints.

EMULATORS FOR THE ST7 FAMILY

The ST7 real time development system consists of various hardware and software components, which together form a flexible and sophisticated system designed to provide compreshensive development support for the ST7 family of microcontrollers.

Features:

- A common hardware development system mainframe supports the entire ST7 family of microcontrollers.
- 64K bytes of user modifiable and configurable emulation RAM, allows memory mapping of all ST7 family devices as well as modelling hypothetical memory configurations.
- Logic analyzer events may trigger a breakpoint or simply define data capture parameters, in accordance to user preferences.
- Simple connection of the emulator system to the host PC via RS-232 serial channel or parallel port.
- Log files allow storage and subsequent redisplay of any display screen for subsequent analysis
- Real-time source level emulation allows viewing and breakpoint setting on high level source code rather than on disassembled target code for optimum user friednliness.
- Unlimited breakpoints may be set for any op-code fetch or any address access, and conditions may be defined for the generation of 2 external synchronization signals.
- 1K by 32-bit wide trace memory for logic analyzer allows complex and sequential events to be defined on any combination of address and data, as well as 3 internal and 5 external logic signals.
- Emulation system may be driven by a Windows-based GNU debugger software or DOS software running on host PC, allowing full control and monitoring of hardware resources.
- Multiple windows allow concurrent real-time display of source code, microcontroller resources, internal registers, trace data, etc.
- Command files can be used to execute a set of debugger commands in batch mode.
- Editable configuration files ensure tailoring of working environmen to user preferences.

ST7 ENGINEERING PROGRAMMING BOARD (EPB)

The ST7 EPB series of programming boards are able to program all ST7 microcontrollers with OTP, EPROM, EEPROM or flash memories, regardless of socket type. Certain programming boards also support ISP (in-situ programming) or ICP (in-circuit programming). These boards are driven by ST programming software (ST Visual Programmer (STVP7), which includes all useful functions such as verify, blank check, read master and others.

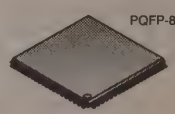
ST9 HIGH PERFORMANCE MATURE CORE ARCHITECTURE 8/16-BIT

The rapidly growing area of real-time applications represents one of the most demanding operating environments for today's microcontrollers. Processors are required to execute complex control algorithms, within a defined minimum response time. With the increasing complexity of embedded control applications, a significant increase in CPU performances and peripheral functionality over conventional 8-bit controllers is required. Designed to meet market needs for cost-effective, high-performance MCUs, the ST9 family bridges the gap between the worlds of 8 and 16-bit microcontrollers and covers a large range of requirements in the high-end 8-bit and low-end 16-bit applications. With an ST9 microcontroller you have the 16-bit performance (sophisticated data manipulation, real time event handling) and the 8-bit advantages (price, noise, power consumption,...). With the ST9 family, STMicroelectronics offers significant performance and flexibility advantages over traditional 8-bit microcontrollers. It is the unequaled solution for more performance. It provides innovative answers to your embedded control requirements with competitive MCU solutions for today and tomorrow.



Abbreviations:

PLL = Phase locked loop
SCI = Serial communcations interfac
SPI = Serial peripheral interface

STMICROELECTRONICS Mature 8 & 16-Bit Microcontrollers

ST9 EVALUATION BOARD

he aim of this Evaluation Board is to provide the user with a ready-to-use hardware environment for ST9 general urpose microcontrollers. The kit contains the hardware required for testing the principal peripherals, such as mers, SPI and SCI interfaces, A/D converters and I/O Ports. This kit, however, does not cover CAN and J1850 evices, but a wire-wrap area, available for connecting specific components, is included and can be used to onnect CAN or J1850 transceivers. If the same peripheral is present several times on the MCU (e.g. the ultifunction timer on the ST92F120/F124/F150/F250) the board may be used to test at least one of them, but not lways all of them.

Kit Includes:

- Motherboard for ST9 Evaluation Board
- ST92F120-PQFP100 daughterboard
- ST92F150-TQFP64 daughterboard
- AC/DC adapter
- RS232 serial cable (male-Male)

EMULATORS FOR THE ST9 FAMILY

he ST9 real time development system consists of various hardware and software components, which together orm a flexible and sophisticated system designed to provide comprehensive development support for the ST9 amily of microcontrollers.

ardware Features:

Clock source selectable
- 4 MHz oscillator on probe
- 5 MHz oscillator on probe
- 5 MHz quartz on probe
- TTL source from application

Application power up detection
9 external input triggers
- 1 input trigger on subclic connector
- 8 input triggers from analyzer probe

2 output triggers (TTL levels)

Emulator Description:

- Mainboard is included in a box powered by an external power supply.
- Microcontroller specific probe
- Windows based IDE STVD9 software running under Windows 95/98/NT4.0.
- Emulator is connected to the user application through the probe: ST90158-EMU2B adapts to QFP80 or TQFP80 package.
- Emulator connected to a host PC or compatible with a standard parallel cable 3V or 5V +/- 10% operating voltage.
- Up to 24 MHz internal clock operation at 5V and 16 MHz at 3V.

ST9 ENGINEERING PROGRAMMING BOARD (EPB)

These engineering programming boards (EPB) feature in-system programming capability for ST9 flash devices. Gang programmers are provided by various third-party vendors. The programming board is linked via a parallel port to a host PC running the ST9 Visual Programmer software (STVP9). This software interface allows you to customize and control the programming.

Hardware Features:

- Programs all the ST9 EPROM, OTP and Flash microcontrollers
- Supports In Situ Programming (ISP) for Flash devices.

Hardware Features:

- View & verify microcontroller's memory contents
- Program executable files into microcontrollers
- Motorola S19 or Intel Hex file formats
- Either create a project that defines how to program the microcontroller or load the files whose contents you want to program and then execute the program.

ST10 FAST MATURE CORE WITH ADVANCED INTERRUPT MANAGEMENT 16-BIT

TMicroelectronics' ST10 processor core has been conceived specifically for embedded applications in custom system-on-chip products for manding markets like hard disk, CD-ROM drives, DVD, car radio devices and engine management units. The ST10 architecture is a 16-bit instruction word MOS microcontroller with 4-stage pipeline. Clocked at 40MHz, it executes speed critical routines, so instructions typically execute in 50ns. uilding on ST's experience in embedded cores, the ST10 architecture is also based on an analysis of the real needs of system designers and software gineers in some of the fastest-moving segments of the industry, where high performance, low power consumption and fast time to market are all essential.

Abbreviations:

CAN = Controller area network
CAPCOM = Capture compare
PEC = Peripheral event controller
PWM = Pulse width modulator
USART = Universal sync/async receiver transmitter

CURRENT STANDARD 8-BIT MICROCONTROLLERS

T7 Industry Standard Fast Core Architecture 8-Bit

e ST7 core is based on an industry standard 8-bit architecture, extended by STMicroelectronics to improve support for high level language programming and to provide ditional interrupt handling features. The accumulator-based core has six internal registers including a 16-bit program counter. The instruction set has 63 instructions with 17 dressing modes offering 8x8-bit unsigned multiply, true bit manipulation, various bit/byte transfer modes and powerful branching logic. Peripheral resources are handled via dicated interrupts and registers.

Fast multiplication: 11 cycles or 1.37 µsecs for 8 x 8 bits (16-bit result).
Rich choice of addressing modes for efficient handling of data in RAM (fast manipulation of tables).
Direct memory addressing (no page handling overhead).

- Up to 16 interrupt vectors for flexible interrupt management.
- Fast interrupt response: 1.5µs typical (with 5-byte context save).
- Powerful bit manipulation instructions

Abbreviations:

ADC = Analog to digital converter
DALI = Digital addressable lighting interface
IAP = In-application programming
ICP = In-circuit programming
I2C = Inter-integrated circuit
PLL = Phase locked loop
ROP = Readout protection
SCI = Serial communications interface
SPI = Serial peripheral interface
SWG = Square wave generator
USB = Universal serial bus

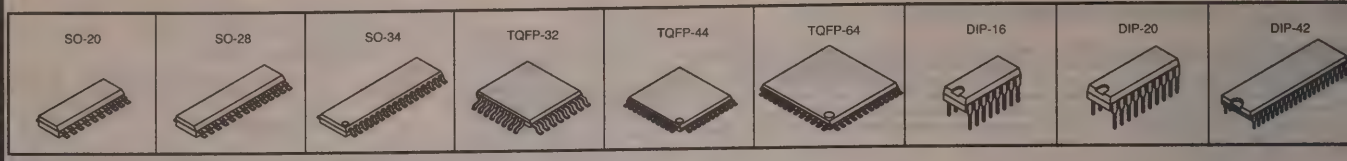
STMICROELECTRONICS 8-Bit Microcontrollers

STMicroelectronics



CURRENT STANDARD 8-BIT MICROCONTROLLERS (Cont.)

ST7 Industry Standard Fast Core Architecture 8-Bit

The ST7 core is based on an industry standard 8-bit architecture, extended by STMicroelectronics to improve support for high level language programming and to provide additional interrupt handling features. The accumulator-based core has six internal registers including a 16-bit program counter. The instruction set has 63 instructions with 17 addressing modes offering 8x8-bit unsigned multiply, true bit manipulation, various bit/byte transfer modes and powerful branching logic. Peripheral resources are handled via dedicated interrupts and registers.

- Fast multiplication: 11 cycles or 1.37 µsecs for 8 x 8 bits (16-bit result).
- Rich choice of addressing modes for efficient handling of data in RAM (fast manipulation of tables).
- Direct memory addressing (no page handling overhead).
- Up to 16 interrupt vectors for flexible interrupt management.
- Fast interrupt response: 1.5µs typical (with 5-byte context save).
- Powerful bit manipulation instructions

Abbreviations:
ADC = Analog to digital converter
DALI = Digital addressable lighting interface
IAP = In-application programming
ICP = In-circuit programming
I2C = Inter-integrated circuit
PLL = Phase locked loop
ROP = Readout protection
SCI = Serial communications interface
SPI = Serial peripheral interface
SWG = Square wave generator
USB = Universal serial bus

ST7FMC THREE-PHASE MOTOR CONTROL STANDARD FAST CORE ARCHITECTURE

ST7FMC Three-Phase Motor Control Standard Fast Core Architecture 8-Bit The ST7MC family is built around an industry-standard 8-bit core. All devices feature standard MCU peripherals, and ST's on-chip motor control peripheral, the Motor Control Cell, which consists mainly of a three-phase Pulse Width Modulator multiplexed on six high-sink outputs, with a highly flexible Back EMF (BEMF) zero-crossing detector and co-processor unit for the sensorless control of permanent magnet Brushless Direct Current (BLDC) motors. ST's patented 'three resistors' sensorless control method - in conjunction with on-chip comparators, op-amp - provides the lowest possible system cost and the highest system integration for BLDC motor control.

Abbreviations:
IAP = In-application programming
ICD = In-circuit debugging
ICP = In-circuit programming
LVD = Low-voltage detection
PLL = Phase locked loop
ROP = Readout protection
RTC = Real time clock timer
SCI = Serial communications interface
SPI = Serial peripheral interface

ST7 EVALUATION BOARDS

AFE ST7 Evaluation Board

ese evaluations boards are intended to help in the evaluation of the behavior of ST7 microcontrollers, as well as mplete solutions including MCU firmware and PC software.

mbedded Peripherals:

ntegrated LVD/AVD (low voltage detector/auxiliary
oltage detector) to avoid external circuitry and data loses
afe backup clock (CSS: clock security system)
igh sink I/Os (up to 50mA) to drive directly
EDs and buzzers
AP: In-application programming
CP: Flash in-circuit programming

rget Devices:

72260, ST72262, ST72264 soldered on the
rd, pre-programmed with examples of software
lications that demonstrates the safe behavior
he ST7LITEx, ST7226x and ST72F32x.

MOTOR CONTROLLER STARTER KITS

ee easy steps to design a brushless motor into an application

Demonstration

Firstly, run the kit BLDC motor, or your own BLDC or Induction motor in open loop, by selecting basic settings on the Graphical User Interface (GUI).

Evaluation

In a few days, explore all the features by running the motor using various control strategies with the GUI and its advanced settings. Save the settings by generating header files. Flash the ST7MC microcontroller, run motor and apply changes to real-time settings to tune the drive parameters.

Development

Within a few weeks, use the generated header files and the ST7MC optimized C software library supplied (source code of the ST7MC kit firmware) and build the final application around it. Develop the application using the real-time debugging feature of the STXF-INDART/USB (included) and the associated STVD7.

mponents:

T7MC inverter and control board
- ST7FMC in DIP56 package
- 10A inverter stage
- UART, Lin transceiver, ICC connector
- External power stage
- Wrapping area, push buttons, trimmers
- 3-phase motor control output

TXF-INDART/USB
- Real-time in circuit debugging
- In-circuit programming
- USB connection to PC

T7MC library, Optimized C library for 3 phase BLDC induction motors compressors
complete set of documentation
ne isolation board for high-voltage motor operation
LDC motor (24V BLDC blower)
ll connection cables
duction motor (optional)
asy to Use GUI to simply evaluate most of advanced registers of the ST7FMC

y Benefits:

eady to run within minutes (require a Windows 98/ME/200/XP PC, and a power supply for the motor
llows real-time control and monitor from PC GUI or standalone operation through on-board push
uttons and trimmers
ame hardware and software platform for BLDC and induction three-phase motors.
TXF-INDART/USB (supplied) Flash programming and real-time in circuit debugging capability
llows some hardware and software platform to be used from evaluation to an advanced development stage
lost of the advanced registers of the ST7MC motor control cell can be set through the kit's
indows GUI, allowing extensive evaluation before coding or modifying any C Software
y-pass connector for external inverter power stage connection

MOUSER STOCK NO.	Mfr. Part Number	Description	Price Each
r.			
1—ST7MC-KIT/BLDC		Demonstration, evaluation and development kit for the ST7MC. Includes firmware, GUI, ST7MC samples, a 12VDC-240VAC 1000W inverter board, isolation board, STXF-INDART/USB low cost in circuit debugger/programmer and 24V BLDC motor	875.00
1—ST7MC-MOTAND		240V/800W selni three-phase induction motor for use with the ST7MC-KIT using induction motor default values (for evaluation purposes)	245.00

ST7 INDART IN-CIRCUIT DEBUGGER

STMicroelectronics partners with SofTec Microsystems to provide the ST7 community with low-cost, but very powerful tools. These kits provide you with everything you need to write, download and in-circuit debug user code for all flash-based ST7 microcontrollers. inDART-ST7 takes advantage of the STVD7 ST integrated development environment (ST7 Visual Debug) and the ICP (in-circuit programming) capability. InDART offers hardware and software debugging features such as real-time code execution, stepping and breakpoints.

MOUSER STOCK NO.	Mfr. Part Number	Supported Devices	Price Each
511—ST7FLITE0-INDART		ST7LITE0x	208.60
511—ST7F264-INDART		ST7226x	278.60
511—ST7C334-INDART		ST72311, ST72124, ST72314, ST72334	258.70

ST7 DEVELOPMENT KITS

The ST7-DVP3 consists of two boards. The main emulation board (MEB) is identical for every ST7-DVP3 development kit and the target evaluation board (TEB) is specific to one, or a family of ST7MCUs. Therefore, what makes each ST7-DVP3 development kit distinct (and defines its emulation capabilities) is the type of TEB it contains. The ST7MDT20-DVP3 TEB is capable of emulating all of the microcontrollers listed in the supported devices, however, to perform in-situ emulation (where the development kit is connected to your application board as if it were the actual microcontroller), you need to have the appropriate connectors.

The in-circuit emulation of TQFP devices requires the purchase of an optional package, in addition to the standard package.

MOUSER STOCK NO.	Mfr. Part Number	Supported Devices	Price Each
511—ST7MDT20-DVP3		ST72321J7, ST72321J9, ST72324J2, ST72324J4, ST72324J6, ST72324K2, ST72324K4, ST72324K6	1260.00

511—ST7MDT20-T64/DVP		ST72321R6, ST72321R7, ST72321R9, ST72521R6, ST72521R7, ST72521R9	655.20
511—ST7MDT20-T80/DVP		ST72521M9	413.00

EMULATORS FOR THE ST7 FAMILY

The ST7 real time development system consists of various hardware and software components, which together form a flexible and sophisticated system designed to provide comprehensive development support for the ST7 family of microcontrollers.

Features:

- A common hardware development system mainframe supports the entire ST7 family of microcontrollers.
- 64K bytes of user modifiable and configurable emulation RAM, allows memory mapping of all ST7 family devices as well as modeling hypothetical memory configurations.
- Logic analyzer events may trigger a breakpoint or simply define data capture parameters, in accordance to user preferences.
- Simple connection of the emulator system to the host PC via RS-232 serial channel or parallel port.
- Log files allow storage and subsequent redisplay of any display screen for subsequent analysis
- Real-time source level emulation allows viewing and breakpoint setting on high level source code rather than on disassembled target code for optimum user friendliness.
- Unlimited breakpoints may be set for any op-code fetch or any address access, and conditions may be defined for the generation of 2 external synchronization signals.
- 1K by 32-bit wide trace memory for logic analyzer allows complex and sequential events to be defined on any combination of address and data, as well as 3 internal and 5 external logic signals.
- Emulation system may be driven by a Windows-based GNU debugger software or DOS software running on host PC, allowing full control and monitoring of hardware resources.
- Multiple windows allow concurrent real-time display of source code, microcontroller resources, internal registers, trace data, etc.
- Command files can be used to execute a set of debugger commands in batch mode.
- Editable configuration files ensure tailoring of working environment to user preferences.

STMICROELECTRONICS Current 8 & 16-Bit Microcontrollers

USB EVALUATION BOARDS

Demonstration Items

Embedded Peripherals:
- Low speed USB

PC Software:
- ST7MDTULS-EVAL: Driver and API for DFU application
- ST7USB-EVAL/232: None

Microcontroller firmwares:
- ST7MDTULS-EVAL: USB library, HID functions, DFU capability
- ST7USB-EVAL/232: USB library, HID functions, UART by I.Os, bridge flow control

Evaluation Items

Hardware:
- ST7MDTULS-EVAL: 2 sockets: SDIP42 (ST7262), SDIP32 (ST7263B)
- ST7USB-EVAL/232: 9 pin RS-232 interface

PC Software:
- ST7MDTULS-EVAL: HID application with the Microsoft driver. DFU example with ST driver
- ST7USB-EVAL/232: Application example with the Microsoft HID driver

Emulator:
- ST7MDTULS-EVAL: MDTU3 for ST7263B, MDTU2 for ST7262
- ST7USB-EVAL/232: MDTU2

MCU Programming:
- ST7MDTULS-EVAL: None
- ST7USB-EVAL/232: ICC connector

MOUSER STOCK NO. Mfr.	Mfr. Part Number	Supported Devices	Price Each

511	ST7USB-EVAL/232	ST7261x Series	89.60

ST7 TRAINING & EVALUATION BOARDS

ST training and evaluation kits are prototype target boards with basic features designed for evaluating sample devices and for self-training on ST7 devices. They offer the following benefits:

Self Training:
Many exercises in the user manual will allow designers to familiarize themselves with the ST7 and peripherals and reduce development times.

Evaluation:
- Designers can perform tests and evaluate all the peripherals of the ST7: SPI, I2C, SCI, CAN, etc.

Programming:
- The board is equipped with the ISP/ICC connector to allow flash in-situ programming

Features:
- ISP/ICC connector
- RS-232 connector
- Trimmer
- LCD, LED's
- Reset button
- External interrupt management
- Buzzer
- Prototype area
- Power supply

Supplemental Hardware

Hardware Compatibility:
- ST7MDT20-EVC/US: In TQFP-64 (socket CAB) EMU2B, DVP2, inDART, STICK, EPB2
- ST7MDT20-EVY/US: In TQFP-64 (socket Yamaichi) EMU2B, EMU3, DVP2, DVP3, inDART, STICK, EPB2

ST7 ENGINEERING PROGRAMMING BOARD (EPB)

The ST7 EPB series of programming boards is able to program all ST7 microcontrollers with OTP, EPROM, EEPROM or flash memories, regardless of socket type. Certain programming boards also support ISP (in-situ programming) or ICP (in-circuit programming). These boards are driven by ST programming software (ST Visual Programmer (STVP7), which includes all useful functions such as verify, blank check, read master and others.

ST7 FLASH STICK (ST IN-CIRCUIT COMMUNICATION KIT)

The ST in-circuit communications kit (STICK) is an ideal introduction to the world of ST7 flash microcontrollers. It is a complete kit for programming the flash ST7 microcontroller. The STICK acts as a communications interface between your PC and the ST7 flash microcontroller soldered on your application board. It can program ST7 flash devices powered with any voltage within their datasheet specified range.

Features:
- ST7 visual programmer software (STVP7)
- Interface board
- Power supply
- All necessary cables

ST9 HIGH PERFORMANCE STANDARD CORE ARCHITECTURE 8/16-BIT

The rapidly growing area of real-time applications represents one of the most demanding operating environments for today's microcontrollers. Processors are required to execute complex control algorithms, within a defined minimum response time. With the increasing complexity of embedded control applications, a significant increase in CPU performances and peripheral functionality over conventional 8-bit controllers is required. Designed to meet market needs for cost-effective, high-performance MCUs, the ST9 family bridges the gap between the worlds of 8 and 16-bit microcontrollers and covers a large range of requirements in the high-end 8-bit and low-end 16-bit applications. With an ST9 microcontroller you have the 16-bit performance (sophisticated data manipulation, real time event handling) and the 8-bit advantages (price, noise, power consumption,...). With the ST9 family, STMicroelectronics offers significant performance and flexibility advantages over traditional 8-bit microcontrollers. It is the unequaled solution for more performance. It provides innovative answers to your embedded control requirements with competitive MCU solutions for today and tomorrow.

Abbreviations:

ST9 EVALUATION BOARD

aim of this Evaluation Board is to provide the user with a ready-to-use hardware ironment for ST9 general purpose microcontrollers. The kit contains the hardware uired for testing the principal peripherals, such as timers, SPI and SCI interfaces, converters and I/O Ports. This kit, however, does not cover CAN and J1850 ices, but a wire-wrap area, available for connecting specific components, is uded and can be used to connect CAN or J1850 transceivers. If the same pheral is present several times on the MCU (e.g. the multifunction timer on the 2F120/F124/F150/F250) the board may be used to test at least one of them, but always all of them.

- Motherboard for ST9 Evaluation Board
- ST92F120-PQFP100 daughterboard
- ST92F150-TQFP64 daughterboard
- AC/DC adaptor
- RS232 serial cable (male-Male)

EMULATORS FOR THE ST9 FAMILY

ST9 real time development system consists of various hardware and software components, ch together form a flexible and sophisticated system designed to provide comprehensive elopment support for the ST9 family of microcontrollers.

rdware Features:

lock source selectable
4 MHz oscillator on probe
5 MHz oscillator on probe
5 MHz quartz on probe
TTL source from application
pplication power up detection
external input triggers
1 input trigger on subclic connector
8 input triggers from analyzer probe
output triggers (TTL levels)

ulator Description:

lainboard is included in a box powered by an external ower supply.
licrocontroller specific probe
Vindows based IDE STVD9 software running nder Windows 95/98/NT4.0.
mulator is connected to the user application through the robe: ST90158-EMU2B adapts to QFP80 or TQFP80 package.
mulator connected to a host PC or compatible with a standard arallel cable 3V or 5V +/- 10% operating voltage.
p to 24 MHz internal clock operation at 5V and 16 MHz at 3V.

ST9 ENGINEERING PROGRAMMING BOARD (EPB)

These engineering programming boards (EPB) feature in-system programming capability for ST9 flash devices. Gang programmers are provided by various third-party vendors. The programming board is linked via a parallel port to a host PC running the ST9 Visual Programmer software (STVP9). This software interface allows you to customize and control the programming.

Hardware Features:

- Programs all the ST9 EPROM, OTP and Flash microcontrollers
- Supports In Situ Programming (ISP) for Flash devices.

Software Features:

- View & verify microcontroller's memory contents
- Program executable files into microcontrollers
- Motorola S19 or Intel Hex file formats
- Either create a project that defines how to program the microcontroller or load the files whose contents you want to program and then execute the program.
- Motorola S19 or Intel Hex file formats

ST10 FAST STANDARD CORE WITH ADVANCED INTERRUPT MANAGEMENT 16-BIT

icroelectronics' ST10 processor core has been conceived specifically for embedded applications in custom em-on-chip products for demanding markets like hard disk, CD-ROM drives, DVD, car radio devices and engine agement units. The ST10 architecture is a 16-bit instruction word CMOS microcontroller with 4-stage pipeline. cked at 40MHz, it executes speed critical routines ,so instructions typically execute in 50ns. Building on ST's erience in embedded cores, the ST10 architecture is also based on an analysis of the real needs of system gners and software engineers in some of the fastest-moving segments of the industry, where high performance, power consumption and fast time to market are all essential.

CAN = Controller area network
CAPCOM = Capture compare
MAC = Multiply accumulator
PEC = Peripheral event controller

STR710F SERIES ARM™ CORE 16/32-BIT

Invest in a microcontroller that can grow to meet expanding performance requirements and allows you to reuse your software and hardware investment. The STR710F series is ideal for embedded applications requiring a compact yet powerful MCU, or versatile scalable solutions such as user interfaces, factory automation systems and point-of sale applications. Built on leading ARM™ architecture, the STR710F series makes you extremely responsive to emerging requirements, enabling you to implement changes rapidly at low cost.

Key Benefits:

- Shortens your development cycle and adapts easily to your customers' expectations
- Best-in-class Flash random access times:
  - up to 48MHz with 0 wait states (with acceleration)
  - up to 30MHz with 0 wait states (without acceleration) with no penalty from context switches and branches. This allows deterministic and optimum behavior ideal for real time applications
- Small, low pin-count TQFP64 package
- TQFP144 package with external memory bus

Key Features:

- Industry standard ARM7TDMI RISC 16/32 bit CPU
- 128K / 256K embedded Flash
- 16 /64K high-speed SRAM
- Versatile package options
- Up to 10 communication interfaces including CAN, USB, HDLC, MMC and smartcard interface
- Four low power modes
- Extensive application development tools including a low-cost kit based on the popular ARM RealView® Developer Suite.

Abbreviations:
CAN = Controller area network
EMI = External memory interface
HDLC = High level data link controller
I2C = Inter-integrated circuit
RTC Real time clock
SC = Smart card
SCI = Serial communications interface
SPI = Serial peripheral interface
UART = Universal asynchronous receiver transmitter
USB = Universal serial bus
WDG = Watch dog timer

ST7 ARM LOW COST STARTER KIT

The starter kits are complete, cost effective solutions for starting application development and evaluating STMicroelectronic's ARM™-core based microcontrollers. They come with all the hardware and software developers need to start developing applications for STR711F and STR712F devices, including the KickStart Development Board with STR71xF microcontroller, the IAR JLink-KS USB-to-JTAG debugger and IAR Embedded Workbench® integrated development environment with 32KB KickStart version of the C/C++ compiler, built in Flash loader and sample projects covering all STR71xF peripherals.

Kit includes:

- **KickStartTM Development Board**
  - 20-pin JTAG interface connector
  - 5V power supply from JLink-KS USB connection furnished via JTAG connection (no external power supply required)
  - Optional external 5-9V power supply
  - Two LEDs
  - External oscillator
  - Two push buttons
  - Reset button
  - RS232 drivers
  - Two UART DB9 connectors
  - Two SPI ports
  - Two I2C ports
  - Potentiometer connected to ADC
  - CAN connector (STR712-SK/IAR)
  - STR712FR2 microcontroller (STR712-SK/IAR)
  - USB connector (STR711-SK/IAR)
  - STR711FR2 microcontroller (STR711-SK/IAR)
- **Additional support files**
  - Sample projects for STR711F and STR712F peripherals
  - STR71xF standard and USB libraries
  - Quick start guide
- **JLink-KS:**
  - Supplies 5V from USB connection via pin 19 of the JTAG connector (no additional power supply required)
  - Download speed up to 50KB/sec
  - Maximum JTAG speed 8MHz
  - Auto speed recognition
  - 20-pin standard JTAG connector
  - USB and 20-pin flat cable included
  - Supported platforms: Microsoft® Windows® 2000 and XP
- **Software CD with:**
  - IAR Embedded Workbench®
  - KickStart 32KB C/C++ compiler
  - C-SPY™ debugger
  - Complete integration with JLink-KS
  - Editor, linker and librarian tools
  - Built-in Flash programming visualSTATE®
  - Powerful code generator creates C/C++ that is absolutely consistent with the system design
  - Advanced verification and validation tools
  - 20-state version included
  - Automatic generation of design documentation

REALVIEW DEVELOPER KIT FOR ST7 ARM™ MICROCONTROLLERS

The RealView Developer Kit for ST is a powerful complete, low-cost development solution that allows you to build, debug and optimize applications for any STR71x, STR720 microcontroller. It includes the RealView C compilation tools, windows-based debugger and the RealView ICE Micro Edition (RVICE-ME) JTAG run control unit, all developed specifically for our line of STR7 devices.

Kit includes:

- Realview C complier
- Windows based debugger
- Realview ICE Micro Edition JTAG run control device

STR7 ARM™ EVALUATION BOARD

The STR710-EVAL board is a complete development platform for the STR71x series. The STR710-EVAL board is a cost effective, flexible and open design to demonstrate the capability of the STR71x series of flash micro-controllers and to enable rapid evaluation of the STR71x devices and available peripherals. It includes the high performance STR710FZ2T6 ARM7TDMITM device that boasts 256 Kbytes embedded flash with best-in-class random access time, 64 Kbytes on-chip high speed SRAM as well as up to 10 serial communication interfaces, including USB and CAN.

Main Components

- STR710F processor running at 48 MHz
- EMI SRAM 4 Mbytes (2Mx16)
- EMI flash 4 Mbytes (2Mx16)
- SPI serial flash
- I2C EEPROM
- LCD display

Features:

- Support for the following interfaces:
  - USB
  - CAN
  - RS232
- LED displays
- Buzzer
- Test Buttons
- JTAG connector

EZ80F91 FLASH MICROCONTROLLER

Features:

- eZ80 core operating at 50MHz
- On-chip 10/100BaseT Ethernet MAC
- 256KB on-chip Flash memory
- 16KB on-chip SRAM
- Power management features supporting Sleep, Halt, and peripheral power-down controls
- Glueless external bus supporting eZ80, Z80, Intel, and Motorola modes
- 32 GPIO
- IrDA compatible Infrared Encoder/Decoder
- Two independent UARTs with multidrop mode
- SPI and I2C ports
- Four, 16-bit counter/timers with I/O capability
- Watch Dog Timer with selectable clock inputs
- Real-time clock with on-chip 32KHz oscillator
- Full-feature PLL
- JTAG and ZiLOG Debug Interfaces
- Interrupt controller supporting internal and external maskable interrupts as well as non-maskable interrupts input
- New DMA-like eZ80 instructions

Description:

The eZ80F91 is the flagship device of the eZ80Acclaim! family of Flash Microcontrollers (MCUs). With 50MHz speed and an on-chip Ethernet MAC, designers now have the necessary performance to execute complex applications quickly and efficiently. Combining 256KB of Flash with 16KB SRAM, the eZ80F91 provides the memory needed to implement communication protocol stacks and achieve the flexibility when performing in-system updates of application firmware. Complementing the high performance, the eZ80F91 offers a rich set of serial communication peripherals to address application designs ranging from consumer electronics and point-of-sale terminals to security systems and industrial control.

EZ80F92 FLASH MICROCONTROLLER

Features:

- eZ80 core operating at 20MHz
- Up to 128KB on-chip Flash memory
- Up to 8KB on-chip SRAM
- Power management features supporting Sleep, Halt, and peripheral power-down controls
- Glueless external bus supporting eZ80, Z80, Intel, and Motorola modes
- Up to 24 GPIO
- IrDA compatible Infrared Encoder/Decoder
- Two independent UARTs with multidrop mode
- SPI and I2C ports
- Six, 16-bit counter/timers with I/O capability
- Watch Dog Timer with selectable clock inputs
- Real-time clock with on-chip 32KHz oscillator
- JTAG and ZiLOG Debug Interfaces
- Interrupt controller supporting internal and external maskable interrupts as well as non-maskable interrupts input
- New DMA-like eZ80 instructions

Description:

The eZ80F92 is another of the devices which make up the eZ80Acclaim!™ family of Flash Microcontrollers (MCUs). Combining 20MHZ speed, 128KB of Flash, and 8KB SRAM, the eZ80F92 provides the performance and memory needed to implement communication protocol stacks and achieve the flexibility when performing in-system updates of application firmware. Complementing the high performance, the eZ80F92 offers a rich set of serial communication peripherals to address application designs ranging from consumer electronics and point-of-sale terminals to security systems and industrial control. The zZ80L92 is the ROMless equivalent to the eZ80F92/93.

EZ80F93 FLASH MICROCONTROLLER

Attention:

- Above features and development kit for eZ80F92Acclaim!™ are applicable to eZ80F93Acclaim!™.

Description:

The eZ80F93 is a new part comprising part of the eZ80Acclaim!™ family of Flash Microcontrollers (MCU's). Combining 20MHz speed, 64KB of Flash, and 4KB SRAM, the eZ80F93 provides the performance and memory needed to implement communication protocol stacks and achieve the flexibility when performing in-system updates of application firmware. Complementing the high performance, the eZ80F93 offers a rich set of serial communication peripherals to address application designs ranging from consumer electronics and point-of-sale terminals to security systems and industrial control.

ZILOG Microcontrollers

ZILOG Z8 ENCORE!™ FLASH MCU DEVELOPMENT KIT

The Z8 Encore! Microcontroller (MCU) Development Kit is a general-purpose platform that allows design engineers to evaluate the capabilities and operation of the Z8 Encore! family of microcontrollers and provides tools to shorten the development cycle. Included with the Development Kit is a free full-version ANSI C-Compiler and a Target Interface Module board that interfaces with the on-chip debugger converting a one-wire interface to a two-wire RS-232-like interface. All necessary hardware, software tools, and technical documentation are included, to provide a complete solution at minimal cost.

Features:

Hardware:
- Evaluation Board, Z8 Encore!
- Smart Cable – DB9 to six-pin male (Z8F08200100KIT)
- RS-232 DB9 Serial Cable
- 9VDC Universal Power Supply

Software:
- ZDS II - Z8 Encore! IDE with ANSI C-Compiler
- Sample code
- Device Driver software

CD-ROM contains:
- ZDS II Quick Start Guide
- Development Kit User Manual
- ZDS II - IDE User Manual
- EZ8 CPU User Manual
- Product Specifications
- Product Briefs
- Application Notes
- Flyer
- Product Linecard

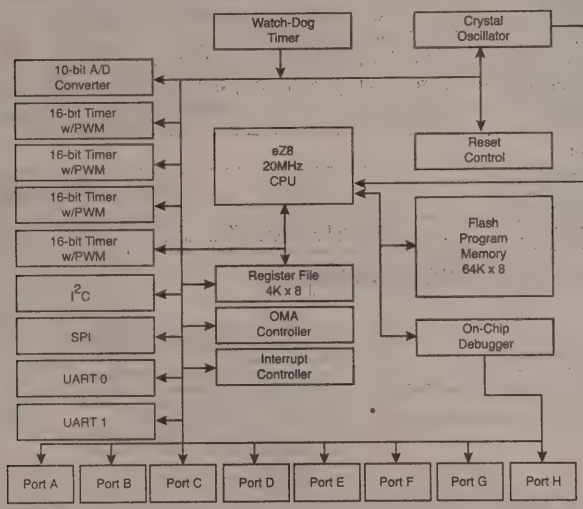
The New Z8 Encore!™ MCU Block Diagram



Features:	Benefits
20MHz CPU Operation	Faster execution of CPU instructions at up to 10 MIPS
Up to 12-Channel, 10-Bit A/D Converter	Precise measurement of analog signals
3-Channel DMA (16-64KB Parts Only)	Increases performance by allowing direct peripheral-to-memory swaps
Up to 64KB of Flash	Allows for code upgrades anytime during development (even in final application)
Up to 4KB SRAM	Extends data space to accommodate large stanck and data tables
SPI and I2C Ports	Supports both universal serial communication protocols with ability to operate simultaneously
Up to Two 9-Bit UARTs	Enables full featured serial communications including RS-485 and IrDA Encoder/Decoder interface
Up to Two 9-Bit UARTs	Enables full featured serial communications including RS-485 and IrDA Encoder/Decoder interface
Up to 24 Interrupts	Hardware interrupts increase CPU's bandwidth
Up to Four 16-Bit Timers with PWMs	Multi-mode timers allow for precise measurement of system events
Single-pin, On-Chip Debugger	Eliminates need for external debug hardware

ZILOG Z8 ENCORE!™ MICROCONTROLLERS

♦ Surface Mount Devic

- Each Z8 Encore! Microcontroller contains the following: Watchdog Timers, SPI Port, 12C Port.
- Core Speed: 20 MHz

MZON RC BULLET REMOTE CONTROL REFERENCE DESIGN KIT

ription:

mber Family Ready to Manufacture Remote Control Reference Design Kit

imzon(tm) RC Bullet Turnkey Universal Remote Control Kits provide a ready-to-manufacture, six-member family of universal remote control platforms. Built on the ZLx16300and ZLx32300, ZiLOG's latest Z8-based IR ontrollers, the Crimzon(tm) RC Bullet kits give you everything you need to start manufacturing your branded universal remote control today. And since more design engineers choose ZiLOG IR components than any other, you know getting the sup-port and experience of the industry leader.

TES:

me punch-through eliminates usermode-switching.
ct code entry makes selecting manufacturer codesets a snap.
ning and non-learning models are available, giving you a complete e of products.
ZiLOG universal IR database gives you up to 600 codesets, providing ort for most manufacturers' consumer entertainment equipment.
-battery indication (ZLP32300 units only).
plete schematics are included, so all you need is a board layout and design.

MOUSER STOCK NO. Mfr.	Mfr. Part No.	Description	Price Each
692—	ZLP16300US3KIT	Non-Learning Kit, 3-Function Control: Cable/Satellite, DVD/VCR, and TV	129.00
692—	ZLP32300US6KIT	Non-Learning Kit, 6-Function Control: Cable, Satellite, DVD, VCR, Audio, and TV	129.00
692—	ZLP32300USLKIT	Learning Kit, 6-Function Control: Cable, Satellite, DVD, VCR, Audio, and TV	159.00
692—	ZLP16300EU3KIT	Non-Learning Kit, 3-Function Control: Cable/Satellite, DVD/VCR, and TV	129.00
692—	ZLP32300EU6KIT	Non-Learning Kit, 6-Function Control: Cable, Satellite, DVD, VCR, Audio, and TV	129.00
692—	ZLP32300EULKIT	Learning Kit, 6-Function Control: Cable, Satellite, DVD, VCR, Audio, and TV	159.00

ZILOG Z8 GP Microcontrollers

Z8 GP SERIES MICROCONTROLLERS

The ZGP323H/L is OTP- and ROM-based members of ZiLOG's new Z8 GP™ MCU family of **general-purpose** microcontrollers. Offering 237 bytes of **general-purpose** RAM and up to 32KB of OTP memory, ZiLOG's Z8 GP MCU family provides support for standard, extended, and automotive temperature ranges. The low-voltage series supports voltage ranges from 2.0V to 3.6V, making it perfect for low-power applications. The high-voltage series supports voltage ranges from 2.0V to 5.5V. Both series offer fast-executing memory use, high GPIO, sophisticated interrupts, input/output bit manipulation, automated pulse generation/reception, and internal key-scan pull-up resistors.

ZILOG Encore!™ XP Microcontrollers

LOG Z8 ENCORE!™ XP FLASH MCU DEVELOPMENT KIT

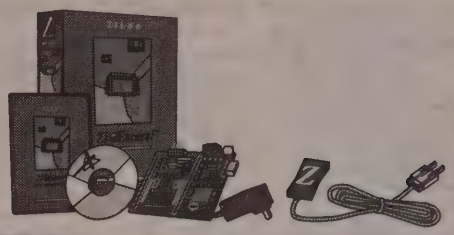
Z8 Encore! XP Microcontroller (MCU) Development Kit is a general-purpose platform that allows design engineers to uate the capabilities and operation of the Z8 Encore! XP family of microcontrollers and provides tools to shorten the lopment cycle. Included with the Development Kit is a free full-version ANSI C-Compiler and a Target Interface ule board that interfaces with the on-chip debugger converting a one-wire interface to a two-wire RS-232-like face. All necessary hardware, software tools, and technical documentation are included, to provide a complete ion at minimal cost.

tures:

ware:
- Development Board, Z8 Encore! XP (Z8F04A28100KIT)
- Smart Cable - DB9 to six-pin male
- RS-232 DB9 Serial Cable
- 9VDC Universal Power Supply

ware:
- ZDS II - Z8 Encore! IDE with ANSI C-Compiler
- Sample code
- Device Driver software

CD-ROM contains:
- ZDS II Quick Start Guide
- Development Kit User Manual
- ZDS II - IDE User Manual
- EZ8 CPU User Manual
- Product Specifications
- Product Briefs
- Application Notes



MOUSER STOCK NO.	Description	Price Each
692-Z8F04A28100KIT	4K Series (28-Pin) w/Full ANSIC Compiler	39.95
692-Z8F04A08100KIT	4K Series (8-Pin) w/Full USB Smart Cable	49.99

LOG Z8 ENCORE!™ XP MICROCONTROLLERS

cifications:

ch Z8 Encore! Microcontroller contains the following:
atchdog Timers, Analog Comparator, Temp. Sensor, Current Sense Amplifier,
d Internal Precision Oscillator
ore Speed: 20MHz

Features:	Benefits
MHz CPU Operation	Faster execution of CPU instructions at up to 10 MIPS
gle pin in-circuit programming	Fast, easy programming
- 4K Flash memory sizes	Allows efficiency in program memory
o 8 channel 10-bit ADC	Precision analog measurement
o 128B non-volatile data storage	Location for frequent or repetitive logging
o 1K RAM	Plenty of space for programs, stacks, and data
rnal Precision Oscillator	Eliminates need for crystal or resonator
chip Temperature Sensor	Thermostat applications with no external components
log Comparator	On-chip saving space
simpedence Amplifier	On-chip OPAMP
T with "fail-safe"	Back up oscillator for power fail

ZILOG EZ80L92 DEVELOPMENT KIT

The EZ80L92 Development Kit provides the developer with a complete set of tools for either the evaluation of the EZ80L92 device or the development of a new application. The kit features two primary boards: the EZ80(tm) Development Platform and the EZ80L92 Ethernet Module. In addition, all of the necessary hardware, software, and technical documentation are included. This development kit provides designers comprehensive support to begin designing immediately. The eZ80Acclaim! eZ80F92/F93 are pin-compatible versions of the eZ80L92 with integrated Flash memory.

Features:

- EZ80 Development Platform
- EZ80 E-NET Module
- EZ80 Development Kit User Manual
- EZ80 Quick Start Guide
- ZPAK II Debug Interface Module
- ZDS II with C-Compiler Software and Documentation (CD-ROM)
- Ethernet Hub
- EZ80 Software and Documentation (CD-ROM)
- International Power Supply (110/220V) Cables

ZILOG Z8 OTP Microcontrollers

ZILOG

The 8-Bit One-Time Programmable (OTP) Microcontrollers are members of ZiLOG's single-chip Z8 MCU family featuring enhanced wake-up circuitry, programmable Watch-Dog Timers, Low-Noise EMI options, and easy hardware/software system expansion capability.

ATMEL EEPROMs, FPGA's and Dataflash

PARALLEL EEPROMS

These products are the highly flexible members of the Atmel Non-Volatile Data Storage Memory family. The Parallel EEPROM enables the user or application to update the stored data byte-by-byte or full sector (page), while providing reliability benefits of high programming endurance and data retention and faster read timing than the Serial EEPROM counterparts. Atmel provides a complete selection of densities (16K to 4 Mb), operating voltages, and device packages. Atmel's battery voltage (2.7), low voltage (3.0) and 5-volt Parallel EEPROMs are used extensively across a broad spectrum of products including telecommunications, avionics and military applications.

FIELD PROGRAMMABLE GATE ARRAY (FPGA) CONFIGURATION MEMORY

Atmel's popular In-System Programmable (ISP) FPGA Configurator EEPROM memories can be used with Atmel's FPSLICTM devices and and SRAM-based FPGA from any supplier, including Atmel's own AT6000 and AT40K FPGA family, as well as products from Xilinx, Altera, Vantis, and Lucent. They come in densities from 65K to 4M and are reprogrammable at 5V or 3.3V, using an industry standard 2-wire serial bus.

SERIAL DATAFLASH

The AT45DBxxxx DataFlash series is a feature-rich, low pin count, sequential access family that complements our extensive offering of AT29xxxx and AT49xxxx single-voltage program Flash memory devices. The DataFlash series now gives users a nonvolatile memory solution for data storage applications such as voice, image or text. The DataFlash was designed to easily and efficiently handle large amounts of frequently-changing data by incorporating features such as small page sizes (264 to 1056 bytes), internal RAM buffers, a simple serial interface, and a flexible command set. Densities from 1M through 32M feature an SPI serial interface.

ATMEL Serial EEPROMs and Microcontrollers

SERIAL EEPROMS

Serial-interface EEPROMs are used in a broad spectrum of consumer, automotive, telecommunications, medical, industrial, and PC related markets. Primarily used to store personal preference data and configuration/setup data, Serial EEPROMs are the most flexible type of non-volatile memory utilized today. Compared to other NVM solutions, Serial EEPROM devices offer a lower pin count, smaller packages, lower voltages, and lower power consumption.

8051 ARCHITECTURE MICROCONTROLLERS

Atmel offers a broad range of microcontrollers based on the 8051 architecture. The product line includes MCS-51® in industry standard socket drop-in devices, In-System Programming capability, and small footprint 20-pin devices in ROMLESS, ROM, OTP & FLASH flavors. Some of the devices also take advantage of the high-speed core (X2) mode which doubles internals frequency for CPU and peripherals upon selection.

CATALYST Serial EEPROMs

CATALYST SEMICONDUCTOR, INC.

CATALYST CAT24C01B ZERO STANDBY 2-WIRE

The CAT24C01B is a 1K-bit Serial CMOS EEPROM internally organized as 128 words of 8 bits each. Catalyst's advanced CMOS technology substantially reduces device power requirements. The CAT24C01B features a 4-byte page write buffer. The device operates via a 2-wire serial interface.

Features:

- 2-Wire Serial Interface
- 1.8 to 6.0Volt Operation
- Low Power CMOS Technology
- 4-Byte Page Write Buffer
- Self-Timed Write Cycle with Auto-Clear
- 1,000,000 Program/Erase Cycles
- 100 Year Data Retention
- Commercial, Industrial and Automotive Temperature Ranges

♦ Surface Mount — For quantities of 500 and up, call for quote.

CATALYST I²C BUS PARTIAL ARRAY WRITE PROTECT

Common Features:

- Low power CMOS technology
- 1.8 to 6.0Volt Operation
- Self-timed write cycle with auto-clear
- Commercial, industrial and automotive temperature ranges
- 100,000 Program/Erase Cycles
- 100 year data retention

CAT34WC02:

- 400 kHz (5V) and 100 kHz (1.8V) I²C bus compatible
- 16-byte page write buffer
- Software write protection for lower 128 bytes
- Hardware write protect

CAT24WC03/05:

- 400 kHz I2C bus compatible
- 16-Byte page write buffer
- Write protect feature: Top 1/2 array protected when WP at V_{IH}

CAT24WC33/65:

- 400 KHz I2C Bus Compatible
- Cascadable for up to Eight Devices
- Schmitt Trigger Inputs for Noise Protection
- Write Protection: Bottom 1/4 Array Protected When WP at V_{IH}

CAT24WC129:

- 1MHz I2C Bus Compatible
- 64-Byte Page Write Buffer
- Write Protect Feature: Top 1/4 Array Protected When WP at V_{IH}

CAT24WC257:

- 1MHz I2C bus compatible
- 64-Byte page write buffer
- Write protect feature: Top 1/4 array protected when WP at V_{IH}

MOUSER ELECTRONICS a ttl company

ATALYST SERIAL EEPROMS (CONT.)

◆ Surface Mount Device

AT24WC Common Features:
- 1.8 to 6.0 Volt Operation
- Low Power CMOS Technology
- Self-timed Write Cycle with Audio-Clear
- Commercial, industrial, and automotive temperature ranges
- 100,000 program/erase cycles
- 100 Year Data Retention

CAT24WC01/02/04/08/16 Series Features:
- 400kHz I²C Bus Compatible
- Write protect feature: Entire array protected when WP at VIH
- Page write buffer

CAT24WC32/64 Series Features:
- 400KHz I²C Bus Compatible
- Cascadable for up to Eight Devices
- 32-Byte Page with Write Buffer
- Schmitt trigger Inputs for noise protection
- Write Protection: Entire array protected when WP at VIH

CAT24WC128 Series Features:
- 1MHz I²C Bus Compatible
- 64-Byte Page with Write Buffer
- Write Protection: Entire array protected when WP at VIH

CAT24WC256 Series Features:
- 1MHz I²C Bus Compatible
- 64-Byte Page with Write Buffer
- Write Protection: Entire array protected when WP at VIH

CAT93C Series Microwire Bus Common Features:
- Low Power CMOS technology
- 1.8 to 6.0 volt operation
- Selectable x8 or x16 memory organization
- Self-timed write cycle with auto-clear
- 1,000,000 program/erase cycles
- 100 Year Data Retention
- Commercial, Industrial and automotive temperature ranges

For quantities of 500 and up, call for quote.

CATALYST Serial EEPROM's

CATALYST SEMICONDUCTOR, INC.

SERIES FEATURES: CAT93C MICROWIRE BUS

CAT93C46/56/57/66/86
- High speed operation:
  - 93C46/56/57/66: 1MHz
  - 93C86: 3MHz
- Selectable x8 or x16 memory organization
- Hardware and software write protection
- Power-up inadvertent write protection
- Sequential read (except CAT93C46)
- Program enable (PE) pin (CAT93C86 only)

CAT25C01/02/04/08/16
- CAT25C01/02/04/08/16
- 10 MHz SPI compatible
- 16/32-byte page write buffer
- Block write protection: Protect 1/4, 1/2 or all of EEPROM array

CAT25C11/03/05/09/17
- 10 MHz SPI compatible
- 16/32-byte page write buffer
- Write protection: Protect first page, last page, any 1/4 array or lower 1/2 array

COMMON FEATURES: CAT25Cxx, CAT250xx ZERO STANDBY SPI BUS
- Low power CMOS technology
- 1.8 to 6.0 volt operation
- Zero standby current
- Hardware and software protection
- SPI modes (0,0 & 1,1)
- Commercial, industrial, automotive and extended temperature ranges
- 1,000,000 program/erase cycles
- 100 year data retention
- Self-timed write cycle

CAT25C32/64
- 10 MHz SPI compatible
- 64-Byte page write buffer
- Block write protection: Protect 1/4, 1/2 or all of EEPROM array

CAT25C33/65
- 10 MHz SPI compatible
- 64-byte page write buffer
- Block write protection: Protect first page, last page, any 1/4 or lower 1/2 of EEPROM array

MOUSER ELECTRONICS a tti company (800) 346-6873

ATALYST SERIAL EEPROMS

T25C128/256 Series Features:
- MHz SPI Compatible
- byte Page write buffer
- ock write protection:
  rotect 1/4, 1/2 or all of EEPROM array

CAT25010/20/40 Series Features:
- 10 MHz SPI Compatible
- 16 byte page write buffer
- Block write protection:
  -Protect 1/4, 1/2 or all of EEPROM array

CAT64LC10/20/40 Series Features:
- Low Power CMOS technology
- SPI Bus compatibility
- Hardware and software write protection
- Hardware reset pin
- Commercial, industrial, automotive and extended temperature ranges
- 1,000,000 program/erase cycles
- 100 year data retention
- Self timed write cycle with auto-clear
- Power-up inadvert write protection: RDY/BSY pin for end-of-write indication
- 2.5V to 6.0V operation

ATALYST LOW VOLTAGE, LOW POWER PARALLEL EEPROMS

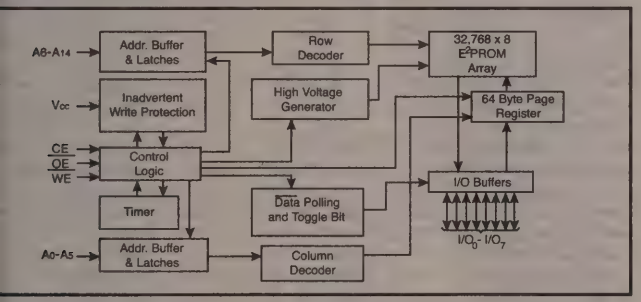
mmon Features:
- nple write operation:
  On-chip address and data latches
  Self-timed write cycle with auto-clear
  mmercial, industrial and automotive temperature ranges
- CMOS and TTL compatible I/O
- Hardware and software write protection
- 100,000 program/erase cycles
- 100 year data retention

cription:

CAT28LV64 & CAT28LV256 are a fast, low power, low voltage CMOS Parallel E2PROM organized as 8K x s, CAT28LV64 and 32K x 8-bits, CAT28LV256. They require a simple interface for in-system programming. hip address and data latches, self-timed write cycle with auto-clear and VCC power up/down write ction eliminate additional timing and protection hardware. DATA Polling and Toggle status bits signal the and end of the self-timed write cycle. Additionally, CAT28LV64 & CAT28LV256 feature hardware and are write protection.

T28LV64:
- K-Bit
- ad access times:
  150/200/250ns
- w power CMOS
  sipation:
  ctive: 8 mA max.
  Standby: 100 µA max.
- st write cycle time:
  5ms max.
- Automatic page write operation:
  – 1 to 32 bytes in 5ms
  – Page load timer
- End of write detection:
  – Toggle bit
  – DATA polling

CAT28LV256:
- 256K-Bit
- Read Access Times:
  – 200/250/300 ns
- Low Power CMOS dissipation:
  – Active: 15 mA Max.
  – Standby: 150 µA Max.
- Fast Write Cycle Time:
  – 10ms Max.
- Automatic Page Write operation:
  – 1 to 64 Bytes in 10ms
  – Page Load Timer
- End of Write Detection:
  – Toggle Bit
  – DATA Polling



Description:

The CAT28LV65 is a low voltage, low power, CMOS parallel EEPROM organized as 8K x 8-bits. It requires a simple interface for in-system programming. On-chip address and data latches, self-timed write cycle with auto-clear and VCC power up/down write protection eliminate additional timing and protection hardware. DATA Polling, RDY/BUSY and Toggle status bit signal the start and end of the self-timed write cycle. Additionally, the CAT28LV65 features hardware and software write protection.

Series Features:

CAT28LV65:
- 64K-Bit
- Read access times:
  – 150/200/250ns
- Low power CMOS dissipation:
  – Active: 8 mA max.
  – Standby: 100 µA max.
- Fast write cycle time:
  – 5ms max.
- Automatic page write operation:
  – 1 to 32 bytes in 5ms
  – Page load timer
- End of write detection:
  – Toggle bit
  – DATA polling
  – RDY/BUSY

CATALYST Parallel EEPROMs

CATALYST SEMICONDUCTOR, INC.

Common Features:
- Simple write operation:
  - -One chip address and data latches
  - -Self-timed write cycle with Auto-clear
- 10,000 program/erase cycle
- 10 year data retention
- Commercial, industrial, and automotive temperature ranges
- CMOS and TTL Compatible I/O

CAT28C512/513 Series Features:
- Fast read access times: 120/150 ns
- Automatic page write operation:
  - -1 to 128 bytes in 5ms
- Low power CMOS dissipation
  - -Active: 50mA Max.
  - -Standby: 200µA Max
- End of write detection:
  - -Toggle Bit
  - -DATA Polling
- Fast write cycle time: 5ms Max
- Hardware and software write protection

CAT28C256/ CAT28C257 Series Features:
- Fast read access times: 120/150 ns
- Low power CMOS dissipation:
  - -Active: 25mA Max.
  - -Standby:150µA Max.
- Fast write cycle time: 5ms Max
- Automatic page write operation:
  - -1 to 32 bytes in 5ms **CAT28C256** only
  - -1 to 128 bytes in 5ms **CAT28C257** only
  - -Page load timer
- End of write detection:
  - -Toggle bit
  - -DATA polling
- Hardware and software write protection

CAT28C64B/ CAT28C65B Series Features:
- Fast read access times: -90/120/150ns
- Low power CMOS dissipation:
  - -Active: 25 mA Max
  - -Standby: 100µA Max
- Fast write cycle time: 5ms Max
- Automatic page write operation:
  - -1 to 32 bytes in 5ms
  - -Page load timer
- End of write detection:
  - -Toggle bit
  - -DATA Polling
  - -RDY/BUSY **CAT28C64B** only
- Hardware and software write protection

CAT28C16A/ CAT28C17A Series Features:
- Fast read access times: 200 ns
- Low power CMOS dissipation:
  - -Active: 25 mA Max.
  - -Standby: 100 mA Max.
- Fast write cycle time: 10 ms Max
- End of write detection: DATA Polling
  - -RDY/BSY Pin **CAT28C17A** only
- Hardware write protection

CATALYST Flash Memory and NVRAM

CATALYST SEMICONDUCTOR, INC.

he CAT28F001 is a high speed 128K X 8 bit electrically erasable and reprogrammable Flash memory ideally uited for applications requiring in-system or after sale code updates.

he CAT28F001 has a blocked architecture with one 8 KB Boot Block, two 4 KB Parameter Blocks and one 112 B Main Block. The Boot Block section can be at the top or bottom of the memory map and includes a eprogramming write lock out feature to guarantee data integrity. It is designed to contain secure code which will ring up the system minimally and download code to other locations of CAT28F001.

he CAT28F001 is designed with a signature mode which allows the user to identify the IC manufacturer and evice type. The CAT28F001 is also designed with on-Chip Address Latches, Data Latches, Programming and rase Algorithms.

he CAT28F001 is manufactured using Catalyst's advanced CMOS floating gate technology. It is designed endure 100,000 program/erase cycles and has a data retention of 10 years. The device is available in JEDEC pproved 32-pin plastic DIP, PLCC or TSOP packages.

FEATURES: CAT28F001 SERIES

Boot Block Flash Memory

- Fast Read Access Time: 70/90/120/150 ns
- On-Chip Address and Data Latches
- Blocked Architecture:
  - One 8 KB Boot Block w/ Lock Out
  - Top or Bottom Locations
  - Two 4 KB Parameter Blocks
  - One 112 KB Main Block
- Low Power CMOS Operation
- 12.0V ± 5% Programming and Erase Voltage
- Automated Program & Erase Algorithms
- High Speed Programming
- Commercial, Industrial and Automotive Temperature Ranges
- Deep Powerdown Mode:
  - 0.05 mA ICC Typical
  - 0.8 mA IPP Typical
- Hardware Data Protection
- Electronic Signature
- 100,000 Program/Erase Cycles and 10 Year
- Data Retention
- JEDEC Standard Pinouts:
  - 32 pin DIP
  - 32 pin PLCC
  - 32 pin TSOP
- Reset/Deep Power Down Mode

CAT28Fxxx Series electrically erasable and reprogrammable Flash memory is ideally suited for applications requiring in-system or after-sale code updates. Electrical erasure of the full memory contents is achieved typically within 0.5 second.

It is pin and Read timing compatible with standard EPROM and E2PROM devices. Programming and Erase are performed through an operation and verify algorithm. The instructions are input via the I/O bus, using a two write cycle scheme. Address and Data are latched to free the I/O bus and address bus during the write operation.

FEATURES: CAT28Fxxx SERIES

Bulk Erase Flash Memory

- Fast Read Access Time: 90/120/150 ns
- Low Power CMOS Dissipation:
  - Active: 30 mA max (CMOS/TTL levels)
  - Standby: 1 mA max (TTL levels)
  - Standby: 100 mA max (CMOS levels)
- High Speed Programming:
  - 10 ms per byte
  - 1 Sec Typ Chip Program*
- Commercial, Industrial and Automotive
- Temperature Ranges
- 12.0V ± 5% Programming and Erase Voltage
- Stop Timer for Program/Erase
- On-Chip Address and Data Latches
- Electronic Signature

CATALYST NVRAM

Features:

- Single 5V supply
- Infinite EEPROM to RAM recall
- CMOS and TTL Compatible I/O
- Power up/down protection
- 10 year data retention
- 100,000 Program/Erase cycles (EEPROM)
- Commercial, industrial, and automotive
- JEDEC Standard Pinouts: 18-pin DIP and 16-pin SOIC (CAT22C10), 8-pin DIP and 8-pin SOIC (CAT24C440)
- Low CMOS Power Consumption: CAT22C10- Active: 40mA max., Standby: 30µA max. CAT24C44- Active: 3mA max., Standby: 30µA max.
- Temperature ranges
- Fast RAM access times (CAT22C10): 200ns, 300ns
- Auto recall power up (CAT24C44)

For quantities of 500 and up, call for quote.

I2C™ COMPATIBLE SERIAL EEPROM FAMILY

Features:
- Range of packages including 8MF, 8SM, 8SN, ST, 8MS, SOT, and wafer
- Maximum bus speed of 1MHz
- Operating temperature of -40C to +85/+125C
- All densities are available in Pb free packaging
- 1.8-5.5V

SII 2-WIRE BUS SERIAL EEPROMS

The Seiko S-24Cxx Series are 2-wire bus serial EEPROMs characterized by low power consumption and wide operating voltage. Each is capable of page write and sequential read.

Specifications:

- Low power consumption: Standby: 2.0 uA Max (Vcc = 5.5V)
  Read: 0.8 mA Max (Vcc = 5.5V)
- Operating voltage range: Read: 1.8 to 5.5V (at -40 to +85°C)
  Write: 2.7 to 5.5V (at -40 to +85°C)
- Operating frequency: 400 kHz (Vcc=5 V±10 %, at -40 to +85°C)
- Write disable function when power supply voltage is low
- Endurance: 100,000,000 cycles/word (at +25°C) write capable
  10,000,000 cycles/word (at +85°C)
  3 x 1,000,000 cycles/word (at +105°C)

SII 3-WIRE BUS SERIAL EEPROMS

The Seiko S-93Cxx Series are high speed, low power EEPROMs with a wide operating voltage range. Each is capable of sequential read, at which time addresses are automatically incremented in 16-bit blocks. The instruction code is compatible with the NM93CS46/56/66 Series.

Specifications:

- Low current consumption: Standby: 1.5 uA Max (Vcc = 5.5V)
  Operating: 0.8 mA Max (Vcc = 5.5V)
  0.4 mA Max (Vcc = 2.5V)
- Operating voltage range: Read: 1.8 to 5.5V (at -40 to +85°C)
  Write: 2.7 to 5.5V (at -40 to +85°C)
- Write disable function when power supply voltage is low
- Function to protect against write due to erroneous instruction recognition
- Endurance: 10,000,000 cycles/word (at +85°C)
  3 x 1,000,000 cycles/word (at +105°C)
  100,000,000 cycles/word (at +25°C)
- Data retention: 10 years (after 10,000,000 cycles/word at +85°C)

SII REAL TIME CLOCKS (RTC)

The S-35190A and S-35390A are low-current-consumption CMOS real-time clock ICs that feature a wide operating voltage range (1.3 V to 5.5 V) and can be driven on a variety of supply voltages, from a main supply to a backup supply. The time keeping current consumption of 0.25 μA and minimum time keeping operation voltage of 1.1 V enable greatly increased battery duration.

Specifications:

- Low current consumption: Standby: 1.5 uA Max (Vcc = 5.5V)
- Wide operating range: 1.3 to 5.5V
- Minimum time keeping operation voltage: 1.1 V
- Built-in clock adjustment function
- Built-in free user register
- Built-in alarm interrupter
- Built-in flag generator at power down or power on
- Auto calendar up to the year 2099, automatic leap year calculation function
- Built-in constant voltage circuit
- Built-in 32 kHz crystal oscillator (Cd built in, Cg external)

SII SINGLE GATE MINI-LOGIC

The S-75V series is a single gate fabricated by utilizing advanced silicon-gate CMOS technology which provides the inherent benefit of CMOS low power consumption to achieve ultra high speed operation correspond to LSTTL IC' s. Input voltage is allowed to be applied even if power voltage is not supplied because no diode is inserted between an input pin and VCC. This allows for interfaces between power supplies of different voltage, output level conversion from 5 V to 3 V and battery backup applications.

Specifications:

- Supply voltage: 2.0 to 5.5V
- Operating temperature: -40°C to +85°C
- Output current: +/- 25mA
- Propagation delay time: 3.5ns @ 5V

Applications:

- Personal computers, peripherals
- Cell phones
- Cameras
- Games

The S-75L series is a single gate fabricated by utilizing advanced silicon-gate CMOS technology which provides the inherent benefit of CMOS low power consumption to achieve operation by only a couple of batteries (1 to 3V). Input voltage is allowed to be applied even if power voltage is not supplied because no diode is inserted between an input pin and VCC. This allows for interfaces between power supplies of different voltage, output level conversion from 3V to 1V and battery backup applications.

Specifications:

- Supply voltage: 1.0 to 3.6V
- Operating temperature: -40°C to +85°C
- Output current: +/- 12.5mA
- Propagation delay time: 7ns @ 3V

Applications:

- Personal computers, peripherals
- Cell phones
- Cameras
- Games

SST 29 SERIES SSF SMALL-SECTOR FLASH

SSF is a cost-effective flash memory that brings to flash the flexibility of programming single Bytes and erasing small 128 Byte/ 256 Byte sectors. These products are offered in x8 organizations, at single 5.0V or 2.7-3.6V power-supply voltages.

Features:

- The SST29xE Series: Page Mode-Small Erase Sector Flash Memories
  - Small page size of 128 Bytes
  - Writing is done on a page-by-page basis

For quantities 250 and up, call for quote.

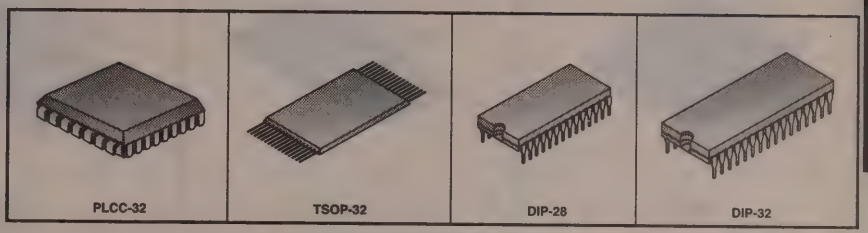
SST 27, 37 SERIES MTP (MANY TIME PROGRAMMABLE)

MTP products combine the electrical erasability of flash with the cost effectiveness of EPROM/OTP and the low-end flash market that does not require ISP (In-System Programming).

Features:

- Organized as 32K x8 / 64K x8 / 128K x8 / 256K x8
- Low Power Consumption:
  - Active Current: 20 mA (typical)
  - Standby Current: 10 µA (typical))
- TTL I/O Compatibility
- JEDEC Standard Byte-wide EPROM Pinouts



For quantities 250 and up, call for quote.

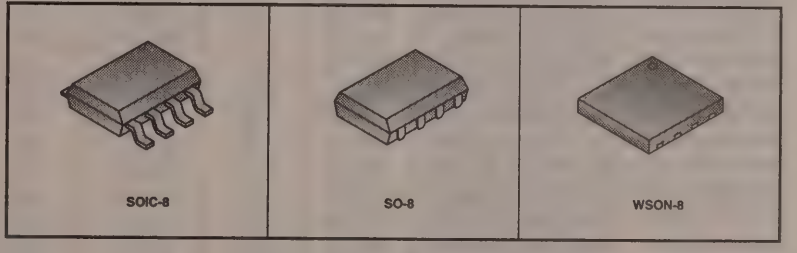
SST 25 SERIES SERIAL FLASH

SST's serial flash family features a four-wire, SPI-compatible interface that allows for a low pin-count package occupying less board space and ultimately lowering total system costs. A write protect (WP#) inhibits the entire memory from write operation and a hardware reset pin (RST#) resets the device to standby mode.

Features:

- Single Voltage Read and Write Operations
  - 2.7-3.6V for SST 25 Series
  - 3.0-3.6V for SST 45 Series
- Superior Reliability
  - Endurance: 100,000 Cycles (typical)
  - Greater than 100 years Data Retention
- Low Power Consumption
  - Active Current: 10 mA (typical)
  - Standby Current: 10 µA (typical)



For quantities 250 and up, call for quote.

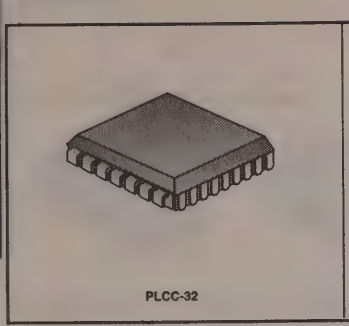
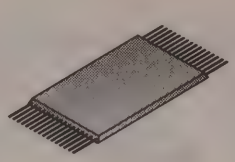
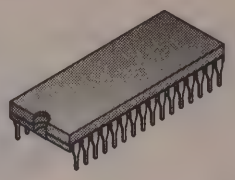
SST Multi-Purpose Flash



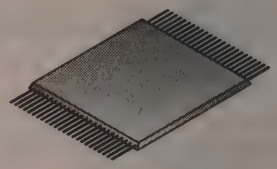
PLCC-32



TSOP-32



DIP-32



TSOP-48

SST 39 SERIES MPF (MULTI-PURPOSE FLASH)

MPF is a cost-effective flash memory that addresses mainstream flash applications that require ISP (In-System Programming). These products are offered in x8 or x16 organizations at single 5.0V or 2.7-3.6V power supply voltages. In addition to the standard read access speed of 70 ns, SST also offers high-speed, low-voltage MPF products with access times of 45 and 55 ns. All 39 Series products use JEDEC standard package/pinout and command set for ease of use.

Features:

- Single 4.5-5.5V Read and Write Operations
- Sector-Erase Capability, Uniform 4K Bytes sectors
- TTL I/O Compatibility

For quantities 250 and up, call for quote.

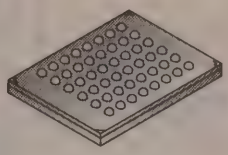
TFBGA-56



TFBGA-48

SST 39 SERIES MPF (MULTI-PURPOSE FLASH)

MPF is a cost-effective flash memory that addresses mainstream flash applications that require ISP (In-System Programming). These products are offered in x8 or x16 organizations at single 5.0V or 2.7-3.6V power supply voltages. In addition to the standard read access speed of 70 ns, SST also offers high-speed, low-voltage MPF products with access times of 45 and 55 ns. All 39 Series products use JEDEC standard package/pinout and command set for ease of use.

Features:

- Single 4.5-5.5V Read and Write Operations
- Sector-Erase Capability, Uniform 4K Bytes sectors
- TTL I/O Compatibility

For quantities of 250 and up, call for quote.

SST 32 - 34 SERIES COMBO MEMORY

Designed, manufactured, and tested for a wide spectrum of applications, the ComboMemory are offered with a guaranteed endurance of 10,000 cycles. Data retention is rated at greater than 100 years. The ComboMemory operate as two independent memory banks with respective bank enable signals. These devices provide the added functionality of being able to simultaneously read from or write to the SRAM bank while erasing or programming in the flash memory bank.

Features:

- Integrated Flash and SRAM for Small Form Factor Design
- Small Footprint - Replaces two parts with one
- Read from or Write to SRAM while Erase/Program Flash

For quantities of 50 and up, call for quote.

STMICROELECTRONICS UV and OTP EPROMs

STMicroelectronics

STMicroelectronics offers a unique product portfolio of OTP and UV EPROM memories with densities from 256Kbit to 32Mbit, in standard and low voltage ranges. These technical features, together with an improved, very fast access time, make OTP and UV EPROM an innovative and high performance solution. They are ideal for Mask ROM replacement, bringing the advantage of flexibility for last minute programming of the latest software, without mask charge. UV EPROM and OTP ROMs are the ideal solutions for storage of system software and firmware for many applications including games, DVD players, printers and many others.

ST Serial EEPROMs are the most flexible non-volatile memories for parameter storage because they can be written at byte level. ST offers the best portfolio in terms of densities, interfaces, low pin count and cost effective packages. Serial EEPROMs are available in various voltages and support I2C, SPI and Microwire buses. ST Quality, Manufacturing and Availability with a wide range of Serial Standard EEPROMs from1Kb up to 512Kb, 3 industry standard serial buses and 2.5V, 1.8V supply voltage ranges.

Many new applications require Serial EEPROM devices, especially in:

- Automotive (engine, dashboard, car radio, airbag and ABS)
- Communications (Corded and cordless phones, answering machines, fax, modem, networking)
- Consumer (TV, Set-Top Box, monitors, camcorder, audio MP3)
- Industrial (motor control, oscilloscope, Power/Gas meter, measuring instruments, home appliance) and Computer (printer, hard disk driver, mother board, CD-ROM, modem, keyboard).

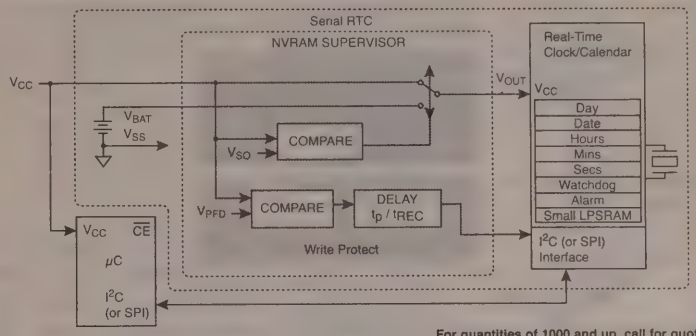
SERIAL REAL-TIME CLOCKS (RTC)

Real-Time Clocks keep track of day, date, and time including century, year, month, hour, minutes, and seconds. Many include Battery Switchover circuits, enabling them to keep time even when power is off. Other timekeeping functions offered include Alarm and Watchdog, and a calibration register supports high accuracy requirements.

RTC options include supervisory functions such as Power-on Reset/Low-Voltage Detect, Early Power-Fail Warning, Battery Monitor, and more. Some parts such as the M41ST85 Non-Volatizor can be used as NVRAM Supervisors by providing Battery Switchover and Write Protection for external Low-Power SRAMs.

ST's popular Serial RTCs support both SPI and I2C busses, and come in packages ranging from QFN16 and TSSOP8 to ST's SNAPHAT® with removable/replaceable battery.



For quantities of 1000 and up, call for quote.

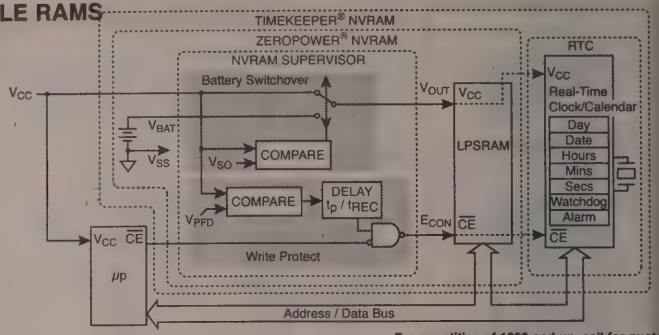
ZEROPOWER® NON-VOLATILE RAMS

ZEROPOWER® NVRAMs combine Low Power SRAMs and Automatic Battery Switchover and Write Protect circuits to implement Non-Volatile RAMs. They can be used just like standard SRAMs, but retain their contents when power is removed. Densities range from 16Mbits down to 16Kbits.

ZEROPOWER® NVRAMs retain their data, even when there is 'ZERO' power present. Two key components comprise a ZEROPOWER® NVRAM: a Low-Power SRAM, and an NVRAM Supervisor. The LPSRAM typically draws less than 1 micro-amp when powered by a battery and can retain its data for years when powered by only a small, lithium cell. The Battery Switchover Circuit switches the LPSRAM from system power (Vcc) to the battery (Vbat). It monitors Vcc and when it begins to fall, the battery is connected to the LPSRAM. When Vcc begins to fall, a micro-processor can behave erratically it could inadvertently overwrite and corrupt the LPSRAM's contents. The Write Protect Circuit cuts off access to the LPSRAM to prevent this. All of ST's ZEROPOWER® NVRAMs include these features. No other special circuits are required. At densities of 256K-bits and below, the NVRAM Supervisor is integrated into the silicon with the LPSRAM. For higher densities, the two are separate ICs.



For quantities of 1000 and up, call for quote.

TIMEKEEPER® NON-VOLATILE RAMS

TIMEKEEPER® NVRAMs build on ST's ZEROPOWER® NVRAMs by adding non-volatile Real-Time Clocks. The Automatic Battery Switchover and Write Protect circuits are extended to the RTC section where counter-registers keep track of year, month, day, date, hours, minutes, and seconds. A low-power 32KHz oscillator provides the timing. It is optimized to draw only a tiny amount of current - as low as 40nA - so it adds only a small additional load to the battery. The RTC registers are mapped into the LPSRAM. Eight to 16 bytes of the LPSRAM are replaced by the RTC registers. The day, date, and time are read and written just like RAM locations.

For quantities of 1000 and up, call for quote.

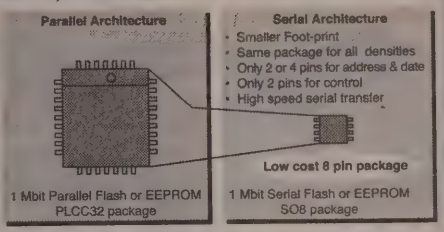
STMICROELECTRONICS SINGLE VOLTAGE (3V) FLASH MEMORY, SERIAL

If you are looking for a fast, high density Serial NVM, the M25P series at 40/50MHz, are significantly faster than competitive flash-based serial access solutions. With their fast system speed, sequential read capability, low power consumption, small package and low cost, ST's Serial Flash family offers added value to both high and low end applications. ST's family of high-speed low-voltage Serial Flash memory includes devices from 512Kb to 64Mb. They feature a four-wire SPI-compatible interface with guaranteed compatibility to future higher and lower densities. Reduced power consumption is enabled by a single supply voltage of 2.7V to 3.6V plus a deep power-down mode that typically draws 1µA.

Features:

- Best in class frequency performance: 40MHz from 512Kb to 8Mbit and 50MHz from 16Mb to 64Mbit!
- Largest portfolio: From 512Kb to 64Mb and above
- Deep Power Down Mode (1µA typical)
- Single 2.7 to 3.6V Supply Voltage
- Smallest packages: S0-8 Narrow from 512Kbit to 4Mbit, S0-8 wide for the 8Mbit, S0-16 wide for the 16Mbit, 32Mbit and the 64Mbit, 512Kbit in TSSOP-8



Parallel Architecture
1 Mbit Parallel Flash or EEPROM
PLCC32 package
Serial Architecture
Smaller Foot-print
Same package for all densities
Only 2 or 4 pins for address & date
Only 2 pins for control
High speed serial transfer
Low cost 8 pin package
1 Mbit Serial Flash or EEPROM
SO8 package

For quantities of 1000 and up, call for quote.

STMICROELECTRONICS SINGLE VOLTAGE (3V) FLASH MEMORY, PAGE ERASABLE SERIAL

If you need fast transfer of data and parameters, think Serial Flash for Data Storage family. The M45PE series is a high capacity non-volatile memory family offering a higher granularity than previously available. Each Page of 256 Bytes can be individually erased and programmed, with a Write instruction offering the possibility to update data at byte level.

- Sequential Read
- 1MB: Full memory READ in 42ms @ 2.7V
- From 1 up to 256 byte programming in one shot (1ms)
- Erasable by page (256 Byte) or by sector
- Write feature offering Byte granularity
- 25MHz and above Clock Rate
- Single 2.7 to 3.6V Supply Voltage
- SPI Bus Compatible Serial Interface

For quantities of 1000 and up, call for quote.

STMICROELECTRONICS SINGLE VOLTAGE (3V) FLASH MEMORY, NAND

In the world of Non Volatile Memory products, the NAND Flash market is growing at the fastest rate, fuelled, as for Multimedia Systems products, by the increasing demand for density, performances, and cost. NAND Flash is the ideal solution for applications requiring a large amount of data storage memory, digital cameras and camcorders, PDAs, MP3 players, digital consumer equipment including 3G cell phones, and removable storage media like USB disk and Flash Cards. STMicroelectronics' NAND Flash range is targeted at a large and growing number of applications requiring a wide spectrum of densities: from 128Mbit up to 8Gbit and above, different page sizes: 528B/264W and 2112B/1056W with a modular interface, footprint independent from density 1.8V and 3V power supplies and a wide packaging roadmap.

- Copy Back program mode, to optimize management of defective blocks
- Chip Enable Don't Care, for an easy code download by MCUs
- Boot from NAND at power-on, to download boot sectors to RAM space
- Security Identifier and Serial Number OTP area
- Hardware data protection pin

For quantities of 1000 and up, call for quote.

STMICROELECTRONICS SINGLE VOLTAGE (3V) FLASH MEMORY, NOR

STs M29 series of Flash Memories meets the most demanding needs of designers looking for 1Mbit to 64Mbit density, with the added advantages of ease of use and reliability. The memories are divided into blocks that can be erased independently to allow valid data to be preserved while old data is erased. For higher flexibility in code storage they have both asymmetrical and symmetrical block architecture. In the first case, the memory array includes a Boot Block (at the Top or Bottom of the address space, to suit different microprocessors), a parameter and main blocks. In the symmetrical architecture the blocks have the same size. Each block can sustain over 100,000 program/erase cycles with 20 years data retention.

- Advanced 0.15µm technology
- Common Flash Interface (CFI)
- Choice of symmetrical and asymmetrical block architecture
- Automatic stand-by mode
- Wide choice of packages
- Security Features
- High performance:
  - 45ns access time at 3V and 5V
  - Full extended Operating Temp. -40 to +85°C
- Very fast erase and programming time
- 12V Vpp fast programming option

For quantities of 1000 and up, call for quote.

STMICROELECTRONICS SINGLE VOLTAGE (5V) FLASH MEMORY, NOR

STs M29 series of Flash Memories meets the most demanding needs of designers looking for 1Mbit to 64Mbit density, with the added advantages of ease of use and reliability. The memories are divided into blocks that can be erased independently to allow valid data to be preserved while old data is erased. For higher flexibility in code storage they have both asymmetrical and symmetrical block architecture. In the first case, the memory array includes a Boot Block (at the Top or Bottom of the address space, to suit different microprocessors), a parameter and main blocks. In the symmetrical architecture the blocks have the same size. Each block can sustain over 100,000 program/erase cycles with 20 years data retention.

- Advanced 0.15µm technology
- Common Flash Interface (CFI)
- Choice of symmetrical and asymmetrical block architecture
- Security Features
- Automatic stand-by mode
- Wide choice of packages
- High performance:
  - 45ns access time at 3V and 5V
  - Full extended Operating Temp. -40 to +85°C
  - Very fast erase and programming time
  - 12V Vpp fast programming option

For quantities of 1000 and up, call for quote.

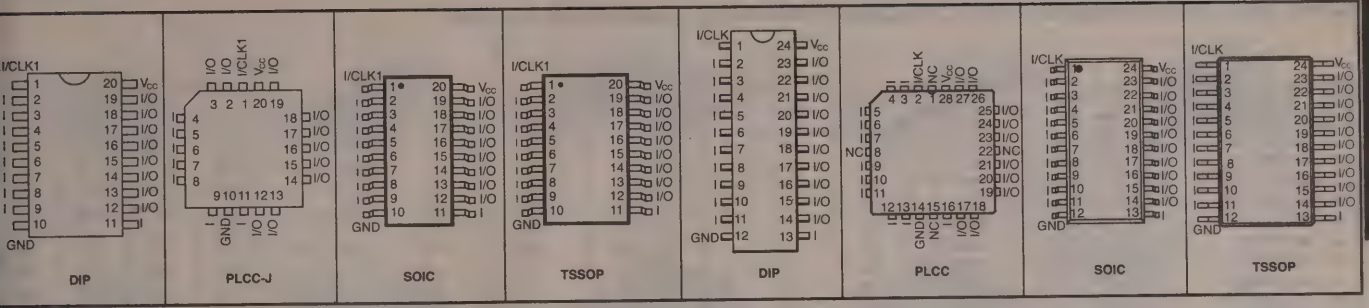
ANACHIP ICT PLD



CMOS SPLD PROGRAMMABLE ELECTRICALLY ERASABLE LOGIC DEVICE

The Anachip ICT PEEL™ is a Programmable Electrically Erasable Logic (PEEL) device providing an attractive alternative to ordinary PLDs. The Anachip ICT PEEL™ offers the performance, flexibility, ease of design and production practicality needed by logic designers today. EE-Reprogrammability provides the convenience of instant reprogramming for development and reusable production inventory minimizing the impact of programming changes or errors. EE Reprogrammability also improves factory testability, thus assuring the highest quality possible.

Features:

- Compatible with popular 16V8 and ZZV10 devices
- CMOS electricity erasable technology
- Replaces random logic in a standard 20, 24 28 pin PLD configuration.

For quantities of 500 and up, call for quote.

CMOS CPLD PROGRAMMABLE ELECTRICALLY ERASABLE LOGIC DEVICE

The Anachip ICT PEEL™ is a Programmable Electrically Erasable Logic (PEEL) device providing an attractive alternative to ordinary PLDs. The Anachip ICT PEEL™ offers the performance, flexibility, ease of design and production practicality needed by logic designers today. EE-Reprogrammability provides the convenience of instant reprogramming for development and reusable production inventory minimizing the impact of programming changes or errors. EE Reprogrammability also improves factory testability, thus assuring the highest quality possible.

Features:

- Compatible with popular EP600/610/910, ATF750, GAL6001/6002 and PALCE29MA16 devices.
- CMOS electricity erasable technology
- Replaces random logic in a standard 24, 28 40 and 44 pin PLD configuration.

For quantities of 500 and up, call for quote.

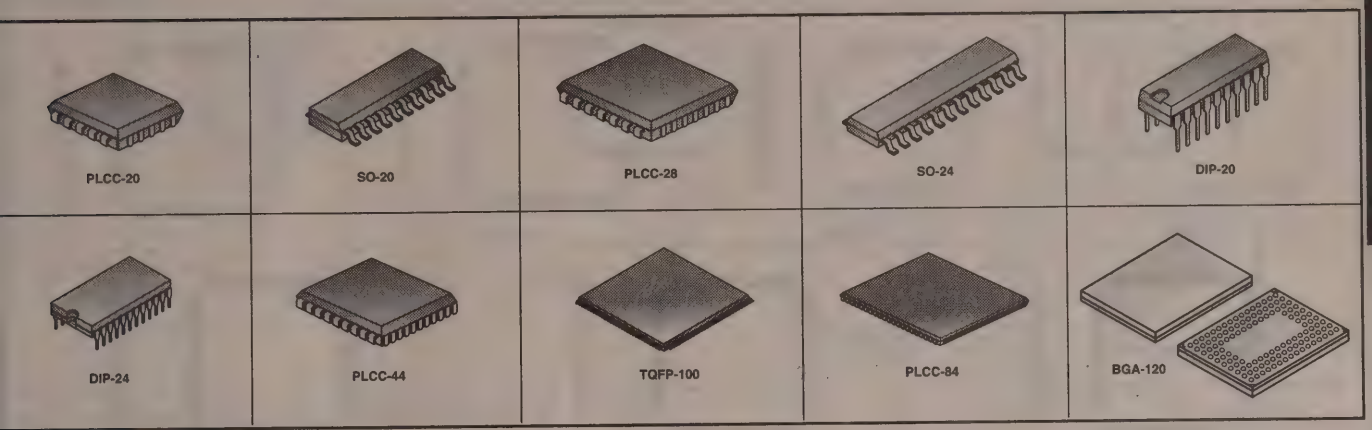
ATMEL Programmable Logic Devices



AT91 ARM THUMB MICROCONTROLLERS

Atmel's AT91 ARM Thumb microcontrollers provide the 32-bit performance every 8-bit microcontroller user is dreaming of while staying within his tight system budget. The extra performance enables the implementation in software of innovative but evolving protocols for communication, compression or control. Building a microcontroller product line around the industry-standard ARM processor core guarantees the customer long-term availability. The widespread acceptance of the processor has resulted in the development of an extensive range of qualified software IP products reducing the time-to-market for new applications. AT91 microcontrollers are targeted at low-power, real-time control applications. They have already been successfully designed into industrial automation systems, MP-3/WMA players, data acquisition products, pagers, point-of-sales terminals, medical equipment, GPS and networking systems.

ELECTRICALLY ERASABLE PROGRAMMABLE LOGIC DEVICES (EEPLDS)

Atmel's EEPLD products consist of industry standard 16V8, 20V8 and 22V10s in a variety of voltage and power-saving options. Atmel offers low-voltage, zero-power and quarter power versions as well as our proprietary "L" automatic power down low-power devices. All popular packages are supported in addition to the Atmel- only, TSSOP package -- the smallest package offered for any EEPLD device. All versions are EE- based for high-reliability and easy reprogramming and are supported by all popular third party programmers.

For quantities of 100 and up, call for quote.

COMPLEX PROGRAMMABLE LOGIC DEVICES (CPLDS)

The ATF15xx CPLD family offers pin-compatible supersets of the popular Altera 7000 and 3000 series devices ranging from 32 to 128 macrocells with propagation delays from 7.5 to 15 ns for 5-volt standard power versions and 15 ns for 3.3v versions. All products are available in low voltage versions and Atmel's proprietary low-power ("L") versions that use Input Transition Detection (ITD) to power down the device automatically when nothing is switching. All devices also support JTAG in-system programming (ISP). The Logic DoublingTM features of the ATF15xx family make these products ideal for new designs. The ATF15xx family offers the most powerful switch matrix and routing resources of any CPLD while also supporting multiple independent feedbacks, individual output enable, global clear and D/T/latch configurable flip-flops. More global clock pins, a programmable pin-keeper and the ability to realize two latches per macrocell are further examples of the enhanced features available from this CPLD product family. The ATF750C has twice the logic of a standard 22V10 in a pin-out compatible 24 or 28-pin package. The ATF750C is ideal for those 22V10 designs that need a bit more logic than is offered in a 22V10 device -- but need to maintain the 22V10 pin-out. The ATV2500B is a very high-density (2500 usable gates) 44-pin CPLD ideally configured for the most difficult 44-pin designs.

For quantities of 100 and up, call for quote.

LATTICE FPGAs

Lattice Semiconductor Corporation

FIELD PROGRAMMABLE GATE ARRAYS (FPGAs)

Lattice brings you a new generation of optimized low-cost FPGAs. For maximum performance and value, the LatticeECP™ (EConomy Plus) FPGA concept combines an efficient FPGA fabric with high-speed dedicated functions. Lattice's first family to implement this approach is the LatticeECP-DSP (EConomy Plus DSP) family, providing dedicated high-performance DSP blocks on-chip. The LatticeEC™ (EConomy) family supports all the general-purpose features of LatticeECP devices without dedicated function blocks to achieve even lower cost solutions.

The LatticeECP and EC families both utilize a silicon-efficient FPGA fabric in which I/O capability, distributed memory, embedded memory, logic and routing have been optimized to provide the best features at value-conscious prices.

LEAD-FREE

For quantities of 100 and up, call for quote.

STMICROELECTRONICS ONE TIME PROGRAMMABLE (OTP) PROGRAMMABLE SYSTEM DEVICES (PSD)

The low cost PSD3XX family integrates high-performance and user-configurable blocks of EPROM, programmable logic, and optional SRAM into one part. The PSD3XX products also provide a powerful microcontroller interface that eliminates the need for external "glue logic". The part's integration, small form factor, low power consumption, and ease of use make it the ideal part for interfacing to virtually any microcontroller.

Key Features:

Single-chip programmable peripheral for microcontroller-based applications
256K to 1M of UV EPROM with the following features:
Configurable as 32, 64 or 128K x 8; or as 16, 32 or 64K x 16
Divided into eight equally-sized mappable blocks for optimized address mapping
As fast as 70ns access time, which includes address decoding
Optional 16Kbit SRAM is configurable as 2K x 8 or 1K x 16
19 I/O pins that can be configured for microcontroller I/O port expansion, programmable address decoder (PAD) I/O, latched address output, open drain or CMOS output
Two Programmable Arrays (PAD A & PAD B) replace your PLD or decoder and have up to 18 inputs and 24 outputs, 40 Product terms (13 for PAD A and 27 for PAD B) and the ability to decode up to 1MB of address without paging
Microcontroller logic that eliminates the need for external "glue logic" that has the following features:
Ability to interface to multiplexed and non-multiplexed busses
Built-in address latches for multiplexed address/data bus
ALE and Reset polarity are programmable (Reset polarity not programmable on V-versions)
Multiple configurations are possible for interface to many different microcontrollers
Optional built-in page logic expands the MCU address space by up to 16 times
Programmable power management with standby current as low as 1uA for low voltage version
Track Mode that allows other microcontrollers or host processors to share access to the local data bus
Built-in security locks the device and PAD decoding configuration
Wide operating voltages
Simple, menu-driven software (PSDsoft) allows configuration and design entry on a PC

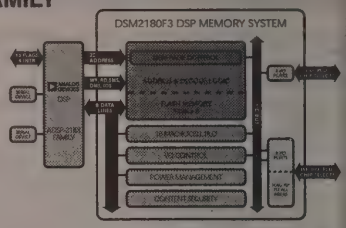
STMICROELECTRONICS Programmable System Devices

STMicroelectronics

STMICROELECTRONICS DIGITAL SIGNAL PROCESSOR (DSP) MEMORY FOR ADSP-218X FAMILY

These system memory devices are for use with Digital Signal Processors (DSP) from the popular Analog Devices ADSP-218X Family. DSM means Digital signal processor System Memory. A DSM device brings in-system programmable flash memory, programmable logic, and additional I/O to DSP systems. The result is a simple and flexible two-chip solution for DSP designs. DSM devices provide the flexibility of flash memory and smart JTAG programming techniques for both manufacturing and the field. On-chip integrated memory, decode logic and memory paging logic make it easy to add large amounts of external flash memory to the ADSP-218X family for bootloading upon power-up and/or overlay memory. The DSP accesses this flash memory using either its byte DMA (BDMA) interface or as an external data overlay memory (no DMA setup overhead).



Key Features:

- 128 KByte flash memory
- General purpose PLD with over 3,000 gates of PLD with 16 macro cells
- Up to 16 individually re-configurable I/O pins
- In-System Programming via JTAG
- Programmable Power Management
- Programmable Security Bit

Key Benefits:

- Glueless interface to ADSP-218x family of DSPs
- Flash memory accessible as Byte DMA (BDMA) or as Data Overlay with no DMA setup required
- Eliminate PLDs and external logic devices
- JTAG ISP allows easy product testing and Just-In-Time manufacturing
- Easy-to-use software development tools downloadable from the web

For quantities of 100 and up, call for quote.

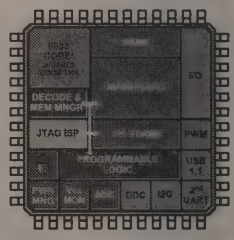
STMICROELECTRONICS MICRO PROGRAMMABLE SYSTEM DEVICES (μPSD)

The μPSD product family features an 8032-microcontroller core surrounded by dual banks of Flash memory, SRAM, programmable logic, I/O, and a wide variety of peripherals. With Flash and SRAM densities up to 288 Kbytes and 8 Kbytes respectively, the μPSD3200 family of devices offers the largest Flash and SRAM densities available today in an 8032-class microcontroller, and the only one to include on-chip programmable logic.



Key Features:

- Standard 8032 MCU Core, 40MHz 5V or 24MHz 3.3V
  Includes programmable watchdog timer
- PSD Architecture, Perfect match for 8051-style architecture
  Programmable memory management for efficient memory paging
  Flexible allocation of memory between "code" and "data" space, even on-the-fly
  Robust and flexible In-Application Programming (IAP) for field updates
- Three Independent Memories, Up to 32KBytes Flash, 32KBytes Secondary Flash
  Up to 32KBytes SRAM, battery capable, Use EEPROM emulation in 2nd Flash
- Programmable Logic, Memory decode and management, 16 macrocell general purpose PLD
- I/O and Communication Channels, Up to 51 GPIO,
  5 PWM Channels, one very hi resolution, USB 1.1 Peripheral,
  low speed 1.5 Mbps, I²C master/slave, Two UART Channels
- JTAG In-System Programming, Program entire chip in 10-25 seconds
  Ideal for development and manufacturing
- Analog Functions, 4 Channel, 8-bit ADC, Vcc Monitor with Reset Generator,
  Security Lock prevents theft of contents, PLD Power Manager

For quantities of 100 and up, call for quote.

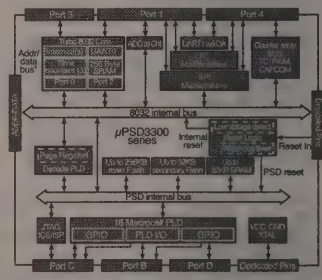
STMICROELECTRONICS MICRO PROGRAMMABLE SYSTEM DEVICES (μPSD) 3300 SERIES

The Turbo uPSD33xx Series combines a powerful 8051-based microcontroller with a flexible memory structure, programmable logic, and a rich peripheral mix to form an ideal embedded controller. At its core is a fast 4-cycle 8032 MCU with a 6-byte instruction prefetch queue (PFQ) and a 4-entry fully associative branching cache (BC) to maximize MCU performance, enabling loops of code in smaller localities to execute extremely fast.



Key Features:

- Fast Turbo 8032 MCU, Advanced 8032 core: four clocks per instruction pre-fetch queue branching cache
- 10 MIPs peak performance @ 40MHz 5.0V Vcc
- 8 MIPs peak performance @ 40MHz, 3.3V Vcc
- 8032 core compatible with third-party tools
- Internal clock divider for low-power mode
- Three 8032 16-bit timers and external interrupts
- Dual XDATA pointers w/auto increment/decrement

Dual- Flash memories with memory management

- True read-while-write concurrent access
- Main Flash size: up to 256KB
- 2nd Flash size: up to 32KB
- 100K min erase cycles, 15 yr retention
- On-chip programmable memory decode logic
- Implement EEPROM emulation SRAM
- Up to 32KB. Use as XDATA or code
- Capable of battery backup with external battery

In-Circuit Serial debug via JTAG and In-System Programming (ISP)

- Set breakpoints, trace, single-step, display, modify memory and SFRs. External event pin
- ISP chip in 10-20 sec with no MCU involvement

Programmable Logic general purpose

- 16-macrocells with architecture similar to industry standard 22V10 PLDs
- Allows creation of shifters, counters, chip-selects, glue-logic to keypads, panels, LCDs etc.
- Configure PLD with simple PSDsoft Express software available for download
  16-bit Programmable Counter Array (PCA)
- Dual-independent counter blocks, each with three 16-bit T/C modules (six modules in total)

Peripheral Interfaces

- Eight 10-bit ADC channels, 10 usec conversion
- I2C master/slave bus controller up to 800KHz
- SPI master bus controller

Supervisor functions

- Watchdog timer
- Vcc monitor with 10μ sec reset generator
- Filtered reset input, reset output

Operating range

- 3.3V applications: Vcc: 3.3V +/- 10% (MCU/Flash)
- 5.0V applications: Vcc: 5.0V +/- 10% (Flash) and 3.3V +/- 10% (MCU)

For quantities of 100 and up, call for quote.

STMICROELECTRONICS Programmable System Devices

STMicroelectronics

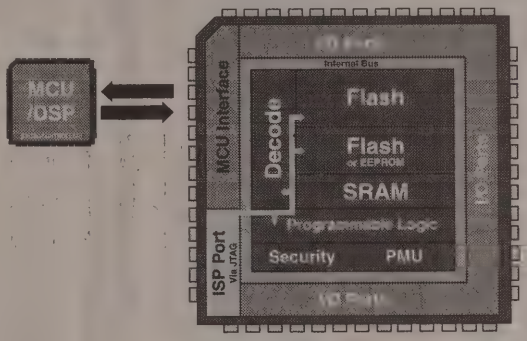
STMICROELECTRONICS EASY FLASH PROGRAMMABLE SYSTEM DEVICES (PSD)

A Flash PSD is a configurable memory system on a chip for embedded systems. They integrate dual flash memory arrays, SRAM, programmable logic, additional I/O, a security feature, and advanced in-system programming (ISP) capabilities onto a single low-cost MCU companion chip. The on-board programmable logic provides a simple, "glue-less" interface to virtually any MCU or DSP, and handles all internal as well as many external logic requirements.

A JTAG ISP port allows in-system programming without MCU assistance, so blank PSDs can be soldered to the circuit board and programmed at the end of the assembly line, in the field, or on the bench. The dual flash arrays allows for in-application re-programming (IAP), which means that the program code can be changed while the application continues to run normally. PSDs can replace up to a dozen discrete components on your circuit board.

Key Features:

- Up to 8 Mbits of main flash for program store
- 64K bytes of flash boot or EEPROM for concurrent programming
- Up to 8K bytes of Scratch Pad SRAM
- Decode PLD (DPLD)
- Power Management Unit (PMU)
- Security Bit
- Up to 52 I/O ports
- In-System Programmable via the JTAG ISP port or the MCU
- In-Application re-Programmable
- Supports multiplexed or non-multiplexed address/data bus
- Supports PSEN for separate code and data addressing issues in 8051
- Provides all programmable control signals



Surface Mount Devices

*These devices feature an EEPROM in place of the 2nd bank of Flash memory

For quantities of 1000 and up, call for quote.

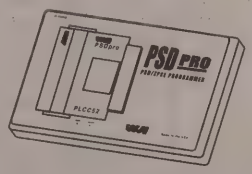
STMICROELECTRONICS PSDPRO PROGRAMMER

High performance engineering programmer designed to program the entire family of PSD products. It is controlled using PSDsoft development software operating in the IBM-PC compatible MS Windows 95/98 or NT environment. It enables quick programming, greatly accelerating the system design process.

Requirements:
- Microsoft Windows 95/98/2000 or NT/XP
- 32MB of RAM
- Hard-drive space: approximately 30MB
- CD-ROM drive



Includes:
- Parallel cable
- Power supply adapter
- Family module (small edge connector PC board already installed in the edge connector on top of the PSDPro programmer.
- Adapter sockets must be ordered separately.
- PSDPro programmer

MOUSER STOCK NO.	Description (Power Supply)	Price Each
511-PSDPRO-110	PSD family devices (110V)	446.88
511-PSDPRO-220	PSD family devices (220V)	446.88

STMICROELECTRONICS PSD900 SERIES DEVELOPMENT KIT

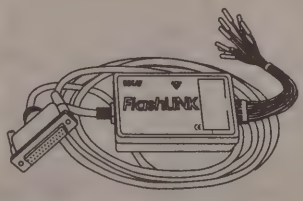
Development kit for using with the PSD900 series of Flash PSDs

Includes:
- Evaluation board with either a 8051 or 68HC11 microcontroller
- FlashLink JTAG in-system programmer (ISP)
- Detailed manual for the development kit
- PSD913F2-90J or PSD934F2-90J sample
- CD-ROM - includes databook, software and videos
- UART and JTAG cables

MOUSER STOCK NO.	Microcontroller use (Power Supply)	Price Each
511-DK805152J-110	8051 (110V)	446.88
511-DK805152J-220	8051 (220V)	446.88
511-DK900-110	8051 (110V)	102.96
511-DK900-220	8051 (220V)	110.88
511-DK68HC1152J-110	68HC11 (110V)	446.88
511-DK68HC1152J-220	68HC11 (220V)	446.88
511-DK900HC11-110	68HC11 (110V)	124.95
511-DK900HC11-220	68HC11 (220V)	124.95

STMICROELECTRONICS FLASHLINK PARALLEL PORT PROGRAMMER

- Attaches to parallel port of a PC running PSDsoft or PSDsoft Express and target system with JTAG port
- With latest software (PSDsoft or PSDsoft Express) can program an entire Flash PSD in 10-20 seconds.
- 100% satisfaction guaranteed



MOUSER STOCK NO.	Description	Price Each
511-FL-101	Stand alone JTAG parallel port programmer	66.08

STMICROELECTRONICS DK4000 PSD SERIES DEVELOPMENT KIT

Development kit for using with the PSD4000 series of Flash PSDs

Includes:
- PSDsoft Express - point & click Windows based development software
- Evaluation board with PSD4135G2 and either an Infineon C167 or Phillips 80C51XA microcontroller
- FlashLINK JTAG in-system programmer (ISP)
- Detailed manual for the development kit
- Ribbon & "flying-lead" JTAG cables for FlashLINK
- Serial UART cable
- CD-ROM - includes databook, software and videos

MOUSER STOCK NO.	Microcontroller use (Power Supply)	Price Each
511-DK4000C167-110	Infineon C167 (110V)	208.60

Luna Labs SnapLogic™

Below is a brief summary of the more than 175 page manual describing the SnapLogic Tutorial. This Tutorial covers logic gates, George Boole, everyday examples, basic electrical theory, AND, OR, NOT, NAND, NOR, N-MOSFET, P-MOSFET, Resistors, Biasing, Inverters, Source Sink, Open Drain, Pull ups, 3-State Output Gates, Combinatorial Logic, Sequential Logic, D-Flip/Flop, Equivalent Gates, Active Low and High, Truth Tables, and basic Schematic design. Over twenty hands-on exercises!

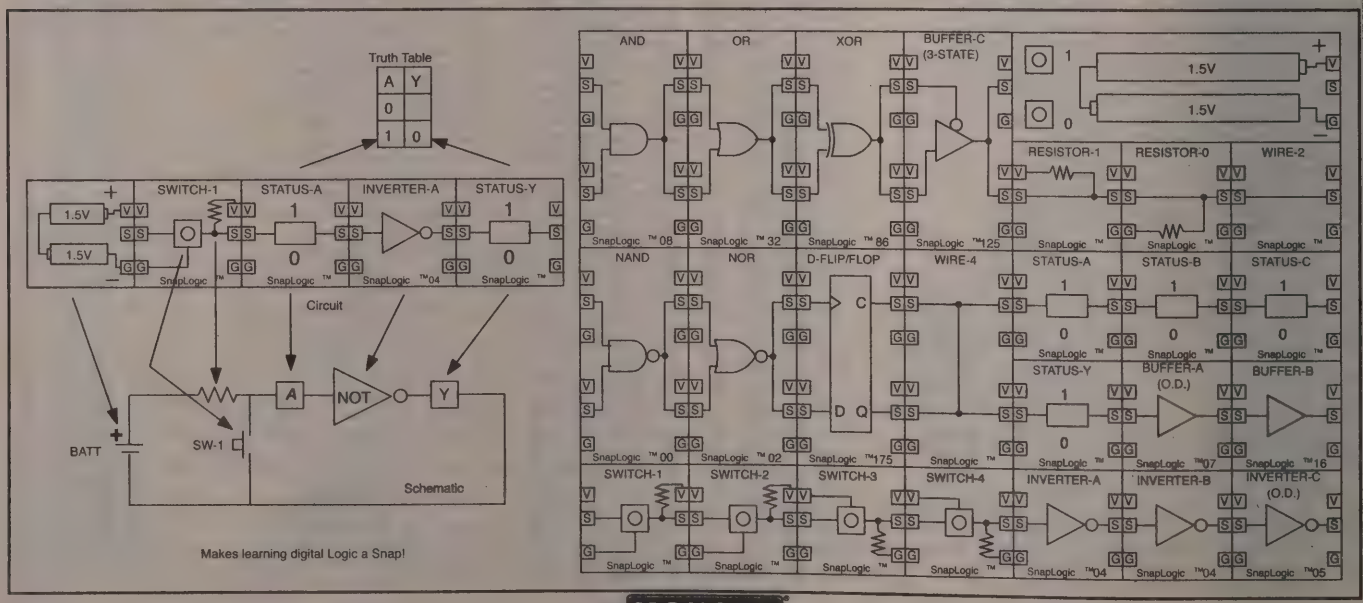
What are SnapLogic Cards?
A set of SnapLogic cards consists of 25 small printed circuit boards (PCBs). Twelve of the cards in this set implement one each of miniature logic gates. These cards provide a simplistic, "hands-on" tool for learning more about the functions of digital logic gates. Students can now assemble and test a wide variety of experimental digital logic circuits using the SnapLogic card set which contains a versatile mix of logic gates.

Features:
Small logic gates represented on small printed circuit boards to include the following:

- AND Gate
- OR Gate
- NOR Gate
- XOR Gate
- NAND Gate
- D-FLIP/FLOP
- BUFFER
- BUFFER-C (3 STATE)
- INVERTER
- SWITCHES / RESISTORS / WIRES
- STATUS Indicates H, L and Z



Makes learning digital Logic a Snap!

STMICROELECTRONICS Logic

STMicroelectronics

74AC ADVANCED HIGH SPEED CMOS

Supply voltage: 2.0 to 6.0V
Operating temperature: -40°C to +85°C
• Output current: 24mA (min.)
• Propagation delay time: 4ns (Typ)

For quantities of 1000 and up, call for quote.

74V2G DUAL GATE HIGH SPEED CMOS

• Supply voltage: 2.0 to 5.5V
• Operating temperature: -55°C to +125°C
• Input/Output Leakage Current: 0.1 uA (min.)
• Delay time @ 5.0V: 0.3ns (Typ)

For quantities of 1000 and up, call for quote.

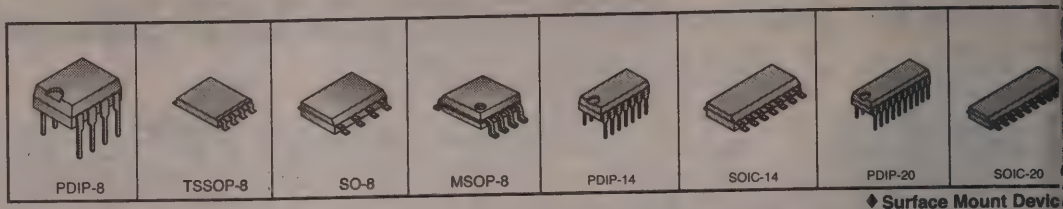
CATALYST Digitally Programmable Potentiometers

CATALYST SEMICONDUCTOR, INC

DPP Advantages:
- Easy, fast adjustment
  - -With digital control, NO screwdrivers!
  - -During Assemble
  - -For field maintenance and calibration
  - -Without "opening" the box or access holes
- In-system calibration
  - -NO access holes needed
  - -Maintain EMI specs
- Non-volatile wiper position
- Multiple POTs per IC package
  - -Small PCB footprint



♦ Surface Mount Devic

CATALYST 32 AND 100 TAP CONFIGURED DIGITALLY PROGRAMMABLE POTENTIOMETERS (DPP™)

Features:
- 32 position linear taper
- Nonvolatile wiper position storage
- Low power CMOS technology
- Single supply operation: 2.5V to 6.0V
- Increment up/down control
- Buffered output, CAT5111 & CAT5112
- Resistor values: 10kΩ, 50kΩ and 100kΩ

For quantities of 500 and up, call for quot

CATALYST 256 TAP CONFIGURED DIGITALLY PROGRAMMABLE POTENTIOMETER (DPP™)

Features:
- Direct WRITE and READ wiper settings
- Buffered wipers
- Independent reference terminal inputs, CAT525
- Rail-to-rail output range
- Single supply operation: 2.7V to 5.5V
- 3-wire serial interface
- 8-bit resolution or 256 tap positions
- Four (4) independently addressable wipers
- Nonvolatile wiper position storage

For quantities of 500 and up, call for qu

CATALYST Supervisors and DC-DC Converters

CATALYST SEMICONDUCTOR, INC.

ATALYST μP SUPERVISORY CIRCUITS WITH WATCHDOG TIMER AND SERIAL EEPROM

ervisory Functions:
- wer Supply Voltage Supervisor
- -Issues reset signal if power supply fails or is out of tolerance
- -Insures μ C operates with power supply voltage
- -Power-On reset and brownout protection

atchdog Timer (CAT1161, CAT1163)
- -Restarts microcontroller/ASIC that has stalled because of a hardware or software failure

Memory Functions:
- 16K bit EEPROM Memory
- 400kHz I^2C Interface
  - -10ms maximum write time
  - -16 byte page write buffer
  - -Hardware write protection

Supervisor with Memory Advantages:
- Replaces two ICs with one
- Reduced PCB footprint by 50%
- Low cost

CAT1161 and CAT1163 Features:
- Watchdog monitors SDA signal (CAT1161)
- Watchdog timer input (WDI) (CAT1163)
- 400kHz I^2C bus compatible
- 2.7v to 6.0V operation
- Low power CMOS technology
- 16 byte page write buffer
- Built-in inadvertent write protection
  - -VCC lock out
  - -Write protect pin, WP
- Active high or low reset
  - -Precision power supply voltage monitor
  - -5V, 3.3V and 3V systems
  - -Five threshold voltage options
- 1,000,000 Program erase cycles
- Manual Reset
- 100 Year data retention
- 8-pin DIP or 8-pin SOIC

CAT1162 Features:
- No watchdog timer
- Lowest cost
- Other features same as CAT1161 and CAT1163

urface Mount Device

ATALYST CAT660 DC-DC CONVERTERS

atures:
- 00mA output current
- harge pump; no inductor required
- Selectable frequency: 10kHz/80kHz
- Replaces Linear Technology LTC 660
- Replaces Maxim Max660
- 8-lead SO and DIP
- New Thin TDFN package (4x4mm): 0.8mm maximum height

For quantities of 500 and up, call for quote.

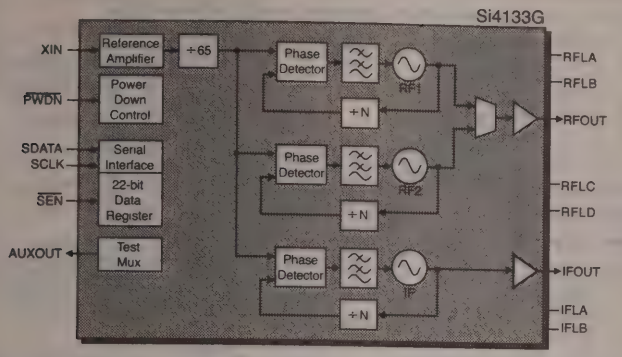
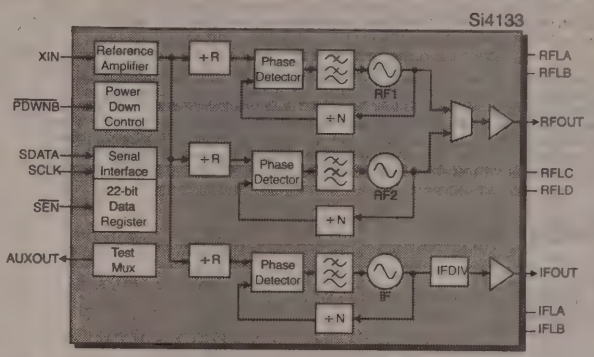
SILICON LABORATORIES RF Synthesizers and Modems

SYNTHESIZERS





Laboratories' wireless solutions are the world's most integrated, robust, reliable and easiest to use wireless solutions available in the GSM/GPRS market today. By eliminating more discretes and requiring fewer external nents than alternate solutions, Silicon Laboratories' products empower our customers to add value-rich features and speed time to market. Best of all, Silicon Laboratories' develops and designs these world-class products in proven, rd CMOS process technology. Generate high-frequency signals used in wireless communication devices.

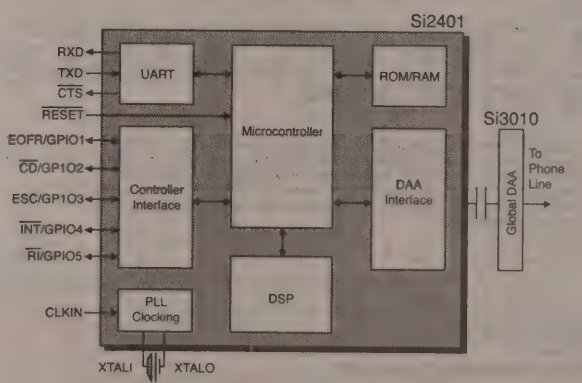
MODEM™ EMBEDDED MODEMS

Laboratories' embedded modem solutions are most feature mpact and flexible 2400 baud modems on the market. le in two 16-pin SOIC packages, the SI2401 and SI2400 ded modem solutions eliminate the need for a separate ta pump, modem controller, codec, isolation transformer, pto-isolators and 2-4 wire hybrid.

res:
- le AT command UART interface
- ally compliant line interface
- n-use and parallel phone intrusion detection
- ID detection and decode



For quantities of 500 and up, call for quote.

SILICON LABORATORIES Transceivers, Clocks and Audio Codec

Silicon Laboratories, based in Austin, Texas, designs and develops analog-intensive, mixed-signal integrated circuits (ICs) for a broad range of applications. Silicon Laboratories' diverse portfolio of highly-integrated, patented solutions is developed by a world-class engineering team with decades of cumulative expertise in mixed-signal technology.

Silicon Laboratories' diverse portfolio of both application specific and general purpose products serves a broad set of markets and applications. Silicon Laboratories' product portfolio includes high-performance microcontrollers, Aero™ GSM/GPRS transceivers, GSM/GPRS power amplifier, RF synthesizers, silicon direct access arrangements (DAAs), ISOmodem® embedded modems, ProSLIC® subscriber line interface circuits, DSL analog front end ICs, voice codecs, SiPHY™ optical networking transceivers, clock and data recovery ICs and precision clock ICs. Silicon Laboratories' solutions are designed into consumer, industrial, automotive and communications products worldwide including wireless handsets, digital video recorders and central office equipment.

PRECISION CLOCK

Features:
- Jitter generation less than 0.3 psRMS (typ OC-192)
- Forward and reverse FEC clock scaling
- Selectable loop filter bandwidths

CLOCK AND DATA RECOVERY ICS

Features:
- Multi-rate operation: OC-3/12/48, STM-1/4/16, GbE and 2.7 Gbps
- Low jitter generation; low power operation
- DSPLLTM technology eliminates external loop filter components

ICs

CODEC FOR VOICE APPLICATIONS

Silicon Laboratories' Si3000 is a highly integrated, programmable, feature rich, and low cost voice band audio CODEC. Applications include handsets and speakerphones for computer telephony, PC modems, web phones, and Fax/MFP machines. The Si3000's digital interface allows direct connection to Silicon Laboratories' serial interface DAAs, or to a wide range of DSPs. Available in a 16-pin SOIC package, the Si3000 dramatically reduces external BOM components such as speaker drivers, bias circuits, and the handset hybrid to reduce total solution cost.

Features:
- Integrated microphone amplifier
- Integrated headphone and speaker drivers
- Integrated handset hybrid
- Serial interface for direct connection to DSP or a Silicon DAA

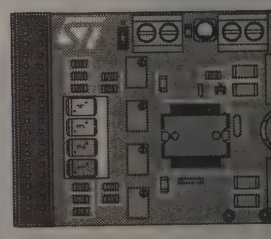
STMICROELECTRONICS EVALUATION BOARDS

With these evaluation board you'll be able to evaluate these devices when driving a three phase brushless DC motor with three hall-effect sensors. Screw connectors provide connection to motor supply rail and 5 V reference for the logic inputs, as well as the four outputs to motor windings. They can also be hooked-up to PractiSPIN interface board (EVALpractiSPIN) through a 34-pin connector. They can also be run also in stand-alone mode: four on board switches are used to select direction of the rotation, enable and disable braking or choosing to run in torque or speed mode.

NEW FROM SUPPLIER



MOUSER STOCK NO.	STM Part No.	Description	Price Each 1-99
511-EVAL6206PD	EVAL6206PD	For L6209PD full bridge driver	35.00

STMICROELECTRONICS Analog Integrated Circuits

STMicroelectroni

ACCELEROMETERS

The LIS3L02AQ is a low-power three-axis linear accelerometer that includes a sensing element and an IC interface able to take the information from the sensing element and to provide an analog signal to the external world. The sensing element, capable to detect the acceleration, is manufactured using a dedicated process called THELMA (Thick Epi-Poly Layer for Microactuators and Accelerometers) developed by ST to produce inertial sensors and actuators in silicon.
The IC interface instead is manufactured using a CMOS process that allows high level of integration to design a dedicated circuit which is trimmed to better match the sensing element characteristics.
The LIS3L02AQ has a user selectable full scale of 2g, 6g and it is capable of measuring accelerations over a maximum bandwidth of 4.0 KHz for the X and Y axis and 2.5KHz for the Z axis. The device bandwidth may be reduced by using external capacitances.

The LIS3L02AQ belongs to a family of products suitable for a variety of applications:

- Motion activated functions in mobile terminals
- Gaming and Virtual Reality input devices
- Free-fall detection and Data protection
- Antitheft systems and Inertial Navigation
- Appliance Control and Robotics

ACCELEROMETER EVALUATION BOARD

The EK3L02AQ will help you in evaluating the LIS3L02AQ MEMS accelerometers in QFN package with the analog output. It implements a typical application composed by the accelerometer and the Rail to Rail precision Buffer TS924. The Supply voltage is generated through a LE00AB/C voltage regulator, it manages the correct power supply allowed by the LIS3L02AQ product.

ANALOG TO DIGITAL CONVERTERS

These dual-channel, 12-bit analog-to-digital converter (ADC) chips that combine high performance and extremely low power consumption, achieving the industry's highest ratio of speed-to-power consumption The TSA1203 performs 40 million samples per second (MSPS) while consuming just 230mW. The TSA1204 runs at 20MSPS while consuming only 120mW. By using multiplexed outputs, the TSA1203 and TSA1204 propel STMicroelectronics' data-conversion product line into the twin-channel ADC arena while keeping the package size to a space-saving 48-pin thin quad flat pack (TQFP) of single-channel units.

Features:
- Internal voltage reference that reduces component count
- Proprietary track-and-hold circuit featuring a 1GHz input bandwidth
- Common clock signal for both channels; selectable I or Q channels
- 2.5V supply voltage with 3.3V-compatible I/O signals
- 2Vp-p differential or single-ended analog inputs, tristate outputs, and good channel isolation.

Applications:
- Medical imaging and ultrasound equipment
- 3G base stations and other digital telecom infrastructure equipment
- In-phase and quadrature signal processing
- High speed data acquisition
- Portable instrumentation products

ANALOG SWITCHES

These high-speed analog S.P.D.T. switches are fabricated in silicon gate C2MOS technology. They are designed to operate from 1.65V to 4.3V, making them ideal for portable applications. They offer very low ON-Resistance. The nIN inputs are provided to control the switches. The switches nS1 are ON (they are connected to common Ports Dn) when the nIN input is held low and OFF (high impedance state exists between the two ports) when IN is held high.

Features:
- Fast switching speed
- Break Before Make Delay Time
- Ultra Low Power Consumption
- Inputs and outputs are equipped with protection circuits against static discharge, giving them ESD immunity and transient excess voltage.

Applications:
- High-end mobile phones
- Notebooks
- PDAs
- Camcorders
- Sound-cards

STMICROELECTRONICS Analog Integrated Circuits

STMicroelectronics

ELECTRONIC IGNITION DRIVERS

The VB921ZVFI is a monolithic high voltage integrated circuit made using the STMicroelectronics VIPower M1-2 technology, which combines a vertical current flow power trilinton with a coil current limiting circuit and a collector voltage clamping. The device is particularly suitable for application in high performance electronic car ignition, where coil current limitation and voltage clamping are required.

Features:
- 6 Amp up to 12 Amp coil current drivers
- 400 volt typical clamping voltage
- Built-in protection, current limiting
- Voltage and current flags

For quantities 2000 and up, call for quote.

SWITCH MODE POWER SUPPLIES

ST's revolutionary VIPer series of off-line switch mode power supply regulators combines an optimized, high voltage, avalanche rugged Vertical Power MOSFET with state-of-the-art PWM circuitry. The result is truly innovative AC to DC conversion that is simpler, quicker and - with component count halved - less expensive. Printers, Scanners, Digital Satellite Receivers, Digital Video Disks, Auxiliary Power Supplies, Battery Chargers, VCRs, TVs, White Goods and a host of other products can now be brought to market in shorter times and at lower cost. In addition to benefits such as adjustable switching frequencies up to 200 kHz, optimized current mode control and comprehensive built-in protection circuits, the VIPer family represents the easiest solution to comply with the "Blue Angel" and "Energy Star" Eco Norms, with extremely low total power consumption from the mains when the system is in stand-by mode.

Features:
- 100W, 50W, 20W, 10W output power
- 1.1 to 30 ohm power output RDS(on)
- 400V, 620V 700V and 730V breakdown voltages
- Avalanche rugged

For quantities 2000 and up, call for quote.

HIGH SIDE DRIVERS

Integrated High Side Drivers offer numerous advantages over the electromechanical relays used in cars today. Diagnostic information output from these devices helps the on-board microprocessor to quickly identify and isolate faults saving repair time and improving safety. ST is promoting VIPower solid-state relays belonging to the latest M0-3 technology, which allow smaller devices with less heat dissipation.

Features:
- Single, Double, Triple or Quadruple Channel
- 40V to 60V breakdown voltage
- 4A to 60A load current

For quantities 2000 and up, call for quote.

RESET CIRCUITS

These reset curcuits are low-power supervisory devices used to monitor power supplies. They perform a single function; asserting a reset signal whenever the VCC supply voltage drops below a preset value and keeping it asserted until VCC has risen above the preset threshold for a minimum period of time.

Features:
- Two output configurations: Push-pull $\overline{\text{RST}}$ output (STM809/811) Push-pull RST output (STM810/812)
- Precision Monitoring of 3V, 3.3V and 5V supily voltages
- 140ms reset pulse width (min)
- Low supply current - 6uA (typ)
- Lead-free package

For quantities 2000 and up, call for quote.

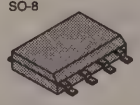
SO-8



STMICROELECTRONICS MICROPROCESSOR SUPERVISORS

These ST microprocessor supervisors offer a mix of reset timing for Power-On Reset, Watchdog, Manual Reset Input, and PFI-PFO (Early Power-fail Warning) in 8-pin packages.

Features:
- Push-pull reset outputs
- 150ms reset pulse width (min)
- Manual reset input
- Power-fail comparator (PFI/PFO)
- Low supply current - 40uA (typ)
- Lead-free package

STMICROELECTRONICS MICROPROCESSOR SUPERVISORS WITH SWITCHOVER

Microprocessor Supervisors with Switchover from ST offer a mix of reset timing for Power-On Reset, Watchdog, Manual Reset Input, PFI/PFO, Battery Switchover, Chip Enable and Battery Freshness Seal in 8-pin packages.

Features:
- Push-pull reset outputs
- 140ms reset pulse width (min)
- Automatic battery switchover
- Power-fail comparator (PFI/PFO)
- Low supply current - 0.4uA (typ)
- Lead-free package

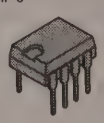
DIP-8



STMICROELECTRONICS MPEG LEVEL 3 (MP3) DECODERS

These fully integrated, high flexibility MPEG Layer III audio decoders are capable of decoding Layer III compressed elementary streams as specified in the MPEG 1 and MPEG 2 ISO standards. These devices can also decode elementary streams compressed by using low sampling rates, as specified by MPEG 2.5. With these decoders, almost anyone who can assemble a PCB can build a solid-state MP3 music player. The only components needed to build an MP3 music player are Flash Memory to store the music, a low-cost microcontroller, a digital-to-analog converter, a small audio power amplifier and a DC-DC converter to power the system.

Features:
- Integrated MP3 decoder solution with DSP core, embedded software, converters and interfaces
- Lowest consumption, typically 85mW at 2.4V decoding a 320kbits/s bitstream
- Compact SO-28 or TQFP-44 packages
- Based on VLIW DSP core specially optimized for audio applications

Applications:
- PC sound cards
- Multimedia players
- Voice recorders

For quantities of 1000 and up, call for qu

STMICROELECTRONICS DUAL-LOW VOLTAGE POWER AMPLIFIERS

These dual low-voltage power amplifiers are intended for use as a dual audio power amplifier in portable cassette players, radios and CD players.
They can also be used in a solid-state MP3 player (other components required would be MPEG decoder, flash memory, low-cost microcontroller and DC-DC-converter).

Features:
- Supply voltage down to 1.8V
- Low quiescent current
- Low crossover distortion
- Bridge or stereo configuration

For quantities of 1000 and up, call for qu

SUPERTEX HOTSWAP CONTROLLER INTEGRATED CIRCUITS

HV1xx and HV3xx hotswap product families are designed to control the inrush current while eliminating any undesirable glitches resulting from hot insertion of the circuit cards into live backplanes. The award winning HV1xx, requires no external components, except a single pass element to operate. It utilizes an innovative and proprietary design that normalizes the hotswap period, regardless of pass element and load capacitor resulting in consistent hotswap operations. The HV3xx families offer programmable inrush control, programmable circuit breaker current (internal 100mv sense) as well as programmable input under and over voltage thresholds. An open drain Power Good (PWRGD) signal is generated once all conditions have been satisfied.

HV100/101 Features:
- Top 100 products EDN magazine
- Industry first 3 pin hotswap controller
- MOSFET Auto adapting circuit
- Safe Hotswapping on backplane power supply rail
- Patent pending short circuit protection

• For Evaluation/Design Shortcut see DEMO BOARDS (IC Included)

SUPERTEX LINEAR REGULATOR INTEGRATED CIRCUITS

The LR6 is a high-input voltage linear regulator for simple functions such as SMPS start-up and high-voltage line conditioning/regulation. The LR7 is a high-input voltage SMPS start-up circuit. The LR8 has an adjustable output voltage. The SR036 and SR037 are dual output, off-line regulators. The LR12 is a high voltage, low output current, adjustable linear regulator. It has a wide operating input voltage range of 13.2V to 100V.

SUPERTEX RELAY DRIVER INTEGRATED CIRCUITS

The Supertex HV9901 is a BiCMOS/DiMOS universal relay driver that employs PWM switching techniques. It is designed for efficient and energy-saving operation of a low voltage relay with supply voltages ranging from 10-450V DC through utilization of the relay coils' inductance.

UPERTEX HIGH VOLTAGE LEVEL TRANSLATORS AND MOSFET DRIVERS

Supertex family of high voltage level translators provide a simple solution to shifting logic signals to uts up to a 400 volt potential difference relative to the input. The primary advantage of these atile products is that they provide direct interface between low voltage logic and high voltage outputs

For quantities of 2000 and up, call for quote.

UPERTEX HIGH VOLTAGE ARRAY AMPLIFIER INTEGRATED CIRCUITS (MEMS DRIVER ICS)

5x family of high voltage amplifiers is designed for the next generation of Micro Electro Mechanical ems (MEMS). The family features 32-channel non-inverting high voltage Amplifier Arrays capable of ut swings up to 295V. To minimize external components, the amplifiers have fixed internal closed gain setting resistors. Supertex is the industry's first company to combine an array of low voltage ple-and-hold circuits with high voltage amplifiers on the same chip.

UPERTEX HIGH VOLTAGE ANALOG SWITCH/MULTIPLEXER ICS

32/HV20220 are a low charge injection 8-channel high-voltage g switch integrated circuit (IC) intended for use in applications ring high voltage switching controlled by low voltage control ls, such as ultrasound imaging and printers.

Features:
- HVCMOS technology for high performance
- Very low quiescent power dissipation-10μA
- Output On-resistance typically 22 ohms
- Low parasitic capacitances
- DC to 10MHz analog signal frequency
- -60dB typical output off isolation at 5MHz
- CMOS logic circuitry for low power
- Excellent noise immunity
- On-chip shift register, latch and clear logic circuitry
- Flexible high voltage supplies
- Surface mount package available

For quantities of 2000 and up, call for quote.

UPERTEX ELECTRONIC LINE SWITCH INTEGRATED CIRCUITS

e electronic switch ICs are designed as a replacement for the typical mechanical hook switch lectromechanical relays in telephones and answering machines. Multiple low-level inputs are provided esign versatility and may be controlled directly from logic circuitry or from mechanical switches. e ICs are line-powered and are especially useful in applications that require telephone ation when external power is lost or otherwise unavailable.

UPERTEX HIGH VOLTAGE RING GENERATOR INTEGRATED CIRCUITS

se of Supertex's high voltage push-pull IC technology allows these products to control high ge outputs without the use of step-up transformers. Use of class-D PWM amplifiers in these llows very high efficiencies to be achieved. This is particularly important for short and medium telecommunication applications where central telephone office power is not available.

ETEX ZXCT SERIES - CURRENT MONITORS

e ZXCT range of high-side current monitors and current sense amplifiers provide elegant design solutions for current measurement and power control. The ZXCT1009 current sensing monitor takes a high-side voltage developed oss a current shunt resistor and, acting as a current mirror, translates it into a scaled ground referenced voltage. The ZXCT1010 offers reduced typical offset and improved accuracy at low sense voltages. The ZXCT1021/1022 current se amplifiers are particularly suited to low sense voltage applications. The ZXCT1030 includes a 1.2V bandgap reference and comparator.

High-side current sensing • Output voltage scaling • Up to 2.5V sense voltage • 2.5-20V supply range • 1% typical accuracy

ETEX LED/LCD DRIVER SOLUTIONS/LIGHTING ICS

e inherent flexibility of the ZXSC circuit means that parallel or series LEDs can be driven depending on application needs. A simple modification to the application circuit means that the maximum pulse current can be programmed to tch the characteristics of the chosen LED load, and pulse current in the range 10mA to 3A and beyond can be easily achieved.

ETEX ANALOG VIDEO PRODUCTS

e Zetex range of video solutions has been expanded by the addition of a sync separator and a DC restore amplifier. The ZXFV4583 separates out the embedded sync information from PAL, NTSC, SECAM and other analog video gnals. The ZXFV4089 uses a sync pulse (typically from a sync separator) to restore the video black level to the correct DC voltage. The high speed amplifiers/buffers include quad and single amplifiers plus mult-channel unity-gain ffers. The ZXFV202, single video amplifier, is available in SOT23 and SO8 offering superb differential gain and phase performance of 0.01%/0.01° respectively. ZXFV301N16 and ZXFV302N16 4:1 multiplexers are for use in video d other high speed applications. For greater versatility the ZXFV301/302 have different channel selection plus an output enable.

NEC/CEL SMD Monolithic Microwave IC's

NEC CEL California Eastern Laboratories

SMD SILICON MONOLITHIC CIRCUITS

NEC offers a broad range of silicon ICs for multimedia, mobile communications and wireless applications. They are based on a high performance bipolar process featuring fTS up to 45GHz. The process permits the productions of transistors with lower parasitics, improved passivation and emitter line widths as small as 0.6 microns. It accommodates low operating voltages while offering high operating frequencies, low noise figures, high efficiency and high reliability. These devices operate from 1 to 5 volts; they include amplifiers, prescalers, frequency converters, IQ modulators and demodulators and multifunction ICs for GPS (Global Positioning System), RKE (Remote Keyless Entry) and W-CDMA markets or for cable modems/settop boxes applications.

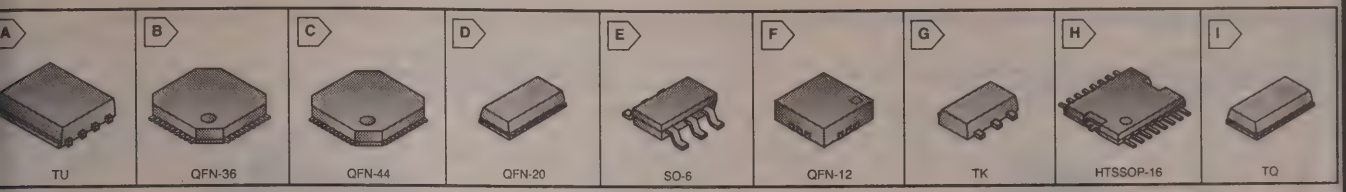
NEC/CEL SMD Monolithic Microwave IC's

NEC CEL California Eastern Laboratories



♦ Surface Mount

NEC CEL California Eastern Laboratories SMD SILICON MONOLITHIC CIRCUITS

C offers a broad range of silicon ICs for multimedia, mobile communications and wireless applications. They are based on a high performance bipolar process featuring fTS up to 45GHz. The process permits the productions of transistors with lower rasitics, improved passivation and emitter line widths as small as 0.6 microns. It accommodates low operating voltages while offering high operating frequencies, low noise figures, high efficiency and high reliability These devices operate from 1 to 5 volts; y include amplifiers, prescalers, frequency converters, IQ modulators and demodulators and multifunction ICs for GPS (Global Positioning System), RKE (Remote Keyless Entry) and W-CDMA markets or for cable modems/settop boxes applications

NEC/CEL RF IC Evaluation Boards

NEC CEL California Eastern Laboratories

Evaluation boards help speed the design process by providing our customers with good examples of working circuit designs. Prototypes are designed, etched and tested in the engineering facility at California Eastern Laboratories.

Features:

- Layout is done in AutoCad®
- Boards are produced on FR4 board material to simulate the production environment
- RF and IF inputs and outputs are ported through SMA connectors
- DC connections are through header pins
- On-board bypass capacitors are provided
- Includes assembly drawings, schematics, datasheet and typical test data

Evaluation boards for RFICs are either 50 ohms in and out for wideband use or have been optimized for use at industry standard frequencies (900 MHz, 1900 MHz, 1.9 GHz, etc.)

UPC2757TB-EVAL	For evaluation of UPC2757TB	109.00
UPC2758TB-EVAL	For evaluation of UPC2758TB	109.00
UPC2798GR-EVAL	For evaluation of UPC2798GR	120.00
UPC3220GR-APBD	For evaluation of UPC3220GR-A	109.00
UPC8112TB-EVAL	For evaluation of UPC8112TB	109.00

Frequency Upconverters

MOUSER STOCK NO.	Description	Price Each
UPC8106TB-EV09	For evaluation of UPC8106TB, optimized for 900MHz	109.00
UPC8106TB-EV19	For evaluation of UPC8106TB, optimized for 1.9GHz	109.00
UPC8106TB-EV24	For evaluation of UPC8106TB, optimized for 2.4GHz	109.00
UPC8163TB-EV09	For evaluation of UPC8163TB, optimized for 900MHz	109.00
UPC8163TB-EV19	For evaluation of UPC8163TB, optimized for 1.9GHz	109.00
UPC8187TB-EV08	For evaluation of UPC8187TB, optimized for 800MHz	109.00
UPC8187TB-EV19	For evaluation of UPC8187TB, optimized for 1.9GHz	109.00
UPC8187TB-EV24	For evaluation of UPC8187TB, optimized for 2.4GHz	109.00

Prescalers

MOUSER STOCK NO.	Description	Price Each
UPB1507GV-EVAL	For evaluation of UPB1507GV	109.00
UPB1508GV-EVAL	For evaluation of UPB1508GV	109.00
UPB1509GV-EVAL	For evaluation of UPB1509GV	109.00
UPB1510GV-EVAL	For evaluation of UPB1510GV	109.00

AGC Amplifiers

MOUSER STOCK NO.	Description	Price Each
UPC3217GV-EVAL	For evaluation of UPC3217GV	109.00
UPC3218GV-EVAL	For evaluation of UPC3218GV	109.00
UPC3219GV-EVAL	For evaluation of UPC3219GV	109.00
UPC3221GV-EVAL	For evaluation of UPC3221GV	109.00
UPC8204TK-EV19	For evaluation of UPC8204TK-A, optimized at 1.9GHz	109.00
UPC8204TK-EV24	For evaluation of UPC8204TK-A, optimized at 2.4GHz	109.00

Driver Amplifiers

MOUSER STOCK NO.	Description	Price Each
UPD5702TU-EV09	For evaluation of UPD5702TU-A, optimized at 900MHz	120.00
UPD5702TU-EV24	For evaluation of UPD5702TU-A, optimized at 2.4GHz	120.00

SPDT Dual Control Switches

MOUSER STOCK NO.	Description	Price Each
UPG2009TB-EVAL	For evaluation of UPG2009TB	109.00
UPG2030TK-EVAL	For Evaluation of UPG2030TK-A	109.00
UPG2179TB-EVAL	For evaluation of UPG2179TB-A	109.00

SPDT Single Control Switch

MOUSER STOCK NO.	Description	Price Each
UPG2010TB-EVAL	For evaluation of UPG2010TB	109.00
UPG2012TB-EVAL	For evaluation of UPG2012TB	109.00
UPG2012TK-EVAL	For evaluation of UPG2012TK	109.00
UPG2015TB-EVAL	For evaluation of UPG2015TB-A	109.00

L-Band SP3T Switch

MOUSER STOCK NO.	Description	Price Each
UPG2031TQ-EVAL	For evaluation of UPG2031TQ-A	120.00

Dualband DPDT Switch

MOUSER STOCK NO.	Description	Price Each
UPG2035T5F-EVAL	For evaluation of UPG2035T5F-A	120.00

Wideband SPDT Switch

MOUSER STOCK NO.	Description	Price Each
UPD5710TK-EVAL	For evaluation of UPD570TK-A	109.00

Power Amplifier for UHF to S-Band

MOUSER STOCK NO.	Description	Price Each
UPG2118K-EV09	For evaluation of UPG2118K, optimized at 900MHz	144.00

GaAs Power Amplifier

MOUSER STOCK NO.	Description	Price Each
UPG2301TQ-EVPW24	For evaluation of UPG2301TQ, optimized at 2.4GHz	120.00

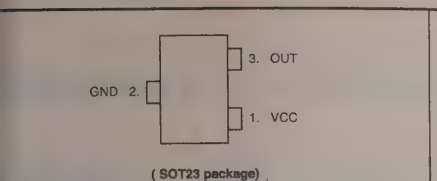
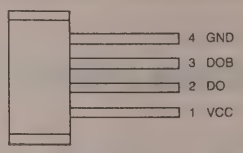
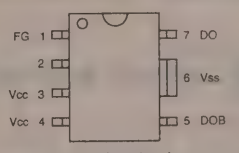
ANACHIP Hall Effect Sensors and Shunt Regulators



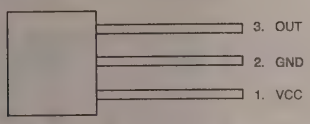
(SOT23 package)



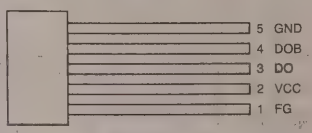
(SIP-4 package)



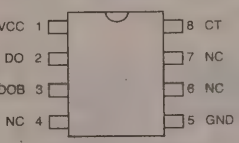
(SOP-7L package)



(SIP3 package)



(SIP5 package)



(SOP-8L package)

ALL EFFECT SENSORS FOR DC FANS AND CONTACTLESS SWITCHES

chip Hall Effect Sensors for DC Fans provide a wide range of options dealing with speed monitoring, and control.
chip Hall Effect Sensor ATS137 is for contactless switch applications.

tures:

ide temperature range
ide input voltage range
mall packaging to save on board space

For quantities of 500 and up, call for quote.

PRECISION SHUNT REGULATORS - ADJUSTABLE

atures:

Precision reference voltage
Sink current capability 200mA
Fast turn-on response
- Low dynamic output impedance 0.2Ω
- Programmable output voltage 20V(AP432), 36V(AP431)
- Low output noise

For quantities of 500 and up, call for quote.
